**Answer: A**

#### NEW QUESTION # 21

What transformation method does SAP Signavio use to offer fast insights with minimal setup?

- A. Plug and Gain
- B. Lift and Shift
- C. Clone and Execute
- D. Extend and Merge

**Answer: A**

Explanation:

SAP Signavio's Plug and Gain approach is designed to provide organizations with rapid process insights without requiring extensive

configuration or long deployment cycles. The method allows companies to connect their SAP systems to Signavio in a streamlined manner so the platform can immediately begin analyzing transactional data, identifying performance gaps, and revealing improvement opportunities. This makes it particularly valuable during early stages of transformation, when leadership needs fast visibility into system performance and process inefficiencies.

Plug and Gain eliminates the need for heavy upfront modeling or manual data migration. Instead, it leverages automated data integration and prebuilt best-practice process models to start generating insights almost immediately. As a result, companies can accelerate their discovery phase, understand current process behavior, and prepare for fit-to-standard workshops much more efficiently.

Options A, C, and D refer to general transformation concepts that are not tied to SAP Signavio's methodology. Plug and Gain is the only method specifically developed for Signavio to offer quick, meaningful insights with minimal effort. It supports transformation readiness by helping teams identify high-priority areas early and align their process improvement initiatives with quantifiable data.
