# Try VMware 2V0-13.25 Exam Questions for Free Before Ordering

What's more, part of that Actual4Dumps 2V0-13.25 dumps now are free: https://drive.google.com/open?id=18JmtLoHf3nCEtqY11YaPj6klzPPzk_dm

Free demo for 2V0-13.25 training materials is available, and you can have a try before buying ,so that you can have a deeper understanding of what you are going to buy. We recommend you have a try before buying. In addition, 2V0-13.25 exam materials contain most of knowledge points of the exam, and you can master major knowledge points as well as improve your professional ability in the process of learning. We also pass guarantee and money back guarantee for 2V0-13.25 Training Materials , if you fail to pass the exam in your first attempt, we will give you full refund ,and no other questions will be asked.

VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
Topic 2	• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
Topic 3	• VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.

Topic 4	• Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
Topic 5	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.

VMware 2V0-13.25 Valid Exam Cost & 2V0-13.25 Valid Test Camp

If you buy the Actual4Dumps's products, we will not only spare no effort to help you pass the certification exam, but also provide a free update and upgrade service. If the official change the outline of the certification exam, we will notify customers immediately. If we have any updated version of test software, it will be immediately pushed to customers. Actual4Dumps can promise to help you succeed to pass your first VMware Certification 2V0-13.25 Exam.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q78-Q83):

NEW QUESTION # 78
What is the default port used for vSphere Client to connect to vCenter Server?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
Port 443 is the default for vSphere Client connections to vCenter.

NEW QUESTION # 79
Requirements:
* Workloads across multiple datacenters (DC01, DC02)
* Support two-factor authentication (2FA)
* Reduce operational overhead
Which two design decisions should be documented for the VCF Single Sign-On (SSO) architecture?

- A. Deploy VIDB in the first VCF instance management domain at DC01.
- B. Configure all additional VCF instances in the same region to point to the VIDB in the first VCF instance at DC02.
- C. Deploy VIDB in the management domain of each VCF instance at DC02.
- D. Deploy VIDB in the management domain of every VCF instance in all sites.
- E. Configure all additional VCF instances in the same private cloud to point to the VIDB in the first VCF instance at DC01.

Answer: A,E

Explanation:

TheVCF Identity Broker (VIDB)enables integration with enterprise identity systems and supports MFA. To reduce operational overhead:

* Deploy VIDB oncein the first VCF instance atDC01.

* Point all additional VCF instancesin the same private cloud to this VIDB.

This avoids deploying and managing multiple VIDB instances, reducing lifecycle overhead while still enabling 2FA.

Options A/B introduce unnecessary duplication. Option C centralizes in DC02, but requirement specifies DC01 is primary.

NEW QUESTION # 80

Which VMware features help with workload migration in VMware Cloud Foundation?

- A. VMware HCX
- B. VMware vRealize Automation
- C. VMware vSAN
- D. VMware vSphere vMotion

Answer: A,D

Explanation:

vSphere vMotion and HCX are key features for workload migration in VMware Cloud Foundation.

NEW QUESTION # 81

Which VMware tools help ensure security and compliance in VMware Cloud Foundation?

- A. VMware vSphere
- B. VMware NSX
- C. VMware vSAN
- D. VMware vRealize Suite

Answer: B,D

Explanation:

VMware NSX and vRealize Suite provide essential security and compliance features within VMware Cloud Foundation environments.

NEW QUESTION # 82

An architect is designing a new VCF solution to meet the following requirements:

The solution must be deployed across two availability zones.

The physical hosts must be installed in a single rack per availability zone.

Workloads running in the cluster must be able to run on hosts in either availability zone.

The architect has decided that to meet these requirements, the solution will be deployed using the Single Instance - Multiple Availability Zones VCF Topology.

When considering the design for the network, what should the architect include in the logical design to meet these requirements?

- A. A single NSX Overlay Transport Zone for all clusters to carry the traffic between the ESXi hosts.
- B. A 25-GbE port on each Top of Rack (ToR) switch connected to the ESXi host uplinks.
- C. A highly available gateway that supports the failure of an entire availability zone.
- D. A physical network fabric in a leaf-spine configuration with dual Cisco switches within each availability zone.

Answer: A

Explanation:

The VCF 5.2 design uses a Single Instance - Multiple Availability Zones topology (e.g., stretched cluster), requiring centralized management across two AZs, hosts in one rack per AZ, and workload mobility across AZs. The logical design focuses on high-level networking architecture, not physical details.

Let's evaluate:

Option A: A physical network fabric in a leaf-spine configuration with dual Cisco switches within each availability zone A leaf-spine

fabric enhances physical network scalability and redundancy, aligning with rack-based deployments. However, it's a physical design detail (switch topology), not a logical networking decision, per the VCF 5.2 Design Guide.

Option B: A highly available gateway that supports the failure of an entire availability zone A gateway (e.g., NSX Edge Tier-0) with AZ failover supports North-South traffic resilience. While valuable, it doesn't directly enable workload mobility across AZs (East-West traffic), which is the core requirement. The VCF 5.2 Networking Guide treats gateways as supplementary, not foundational for stretched clusters.

Option C: A 25-GbE port on each Top of Rack (ToR) switch connected to the ESXi host uplinks Specifying 25-GbE ports is a physical network detail (bandwidth, cabling), not a logical design element. The VCF 5.2 Design Guide relegates port speeds to physical implementation, not logical architecture.

Option D: A single NSX Overlay Transport Zone for all clusters to carry the traffic between the ESXi hosts In a stretched cluster topology, a single NSX Overlay Transport Zone enables VM mobility across AZs via overlay networks (e.g., Geneve). It ensures workloads can run on hosts in either AZ by providing a unified L2/L3 connectivity layer, managed by NSX. The VCF 5.2 Architectural Guide mandates a single Overlay TZ for stretched deployments to support vMotion and workload distribution, directly meeting the requirement.

Conclusion:

Option D is the logical design decision, enabling workload mobility across AZs in a stretched VCF topology via NSX overlay networking.

NEW QUESTION # 83

......

If you purchase our study materials to prepare the 2V0-13.25 Exam, your passing rate will be much higher than others. Also, the operation of our study material is smooth and flexible and the system is stable and powerful. You can install the 2V0-13.25 exam guide on your computers, mobile phone and other electronic devices. There are no restrictions to the number equipment you install. In short, it depends on your own choice. We sincerely hope that you can enjoy the good service of our products.
