It is human nature to pursue wealth and success. No one wants to be a common person. In order to become a successful person, you must sharpen your horizons and deepen your thoughts. Our Mule-Dev-301 study materials can help you update yourself in the shortest time. You just need to make use of your spare time to finish learning our Mule-Dev-301 Study Materials. So your normal life will not be disturbed. Please witness your growth after the professional guidance of our Mule-Dev-301 study materials.

Our Mule-Dev-301 study guide design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our Mule-Dev-301 exam dumps provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our Mule-Dev-301 Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the Mule-Dev-301 study guide can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.

New Mule-Dev-301 Test Sample, Test Mule-Dev-301 King

One strong point of our APP online version is that it is convenient for you to use our Mule-Dev-301 exam dumps even though you are in offline environment. In other words, you can prepare for your Mule-Dev-301 exam with under the guidance of our Mule-Dev-301 Training Materials anywhere at any time. Just take action to purchase we would be pleased to make you the next beneficiary of our Mule-Dev-301 exam practice. Trust us and you will get what you are dreaming!

Salesforce Certified MuleSoft Developer II Sample Questions (Q46-Q51):

NEW QUESTION # 46

A Mule application deployed to multiple Cloudhub 2.0 replicas needs to temporarily persist large files over 10MB between flow executions, and routinely needs to query whether the file data exists on separate executions.

How can this be achieved?

- A. Store the key and full contents of the file, caching the filename and location between requests
- B. Use an in-memory Object Store
- C. Store the key and full contents of the file in an Object Store
- **D. Store the contents of the file on separate storage, and store the key and location of the file Object using Object Store v2**

Answer: D

Explanation:

To temporarily persist large files over 10MB between flow executions, and routinely query whether the file data exists on separate executions, the developer should store the contents of the file on separate storage, and store the key and location of the file object using Object Store v2. This way, the developer can avoid storing large files in memory or exceeding the size limit of Object Store v2 (10MB per object). The developer can also use Object Store v2 operations to query, retrieve, or delete the file object by its key. Reference: <https://docs.mulesoft.com/object-store/osv2-faq#can-i-store-files-in-object-store-v2>

NEW QUESTION # 47

Refer to the exhibit.

Based on the code snippet, schema.json file, and payload below, what is the outcome of the given code snippet when a request is sent with the payload?

- A. The Mule flow will execute successfully with status code 204
- B. The Mule flow will execute successfully with status code 200, and the response will be the JSON sent in request
- **C. The Mule flow will throw the exception 'JSON:SCHEMA_NOT_HONOURED'**
- D. The Mule flow will execute successfully with status code 200m and a response will display the message " Age in years which must equal to or greater than zero."

Answer: C

Explanation:

Based on the code snippet, schema.json file, and payload below, the outcome of the given code snippet when a request is sent with the payload is that the Mule flow will throw the exception 'JSON:SCHEMA_NOT_HONOURED'. This is because the payload does not conform to the schema.json file, which specifies that age must be a number greater than or equal to zero. The payload has age as a string with a negative value, which violates the schema. Therefore, the validate-schema operation throws an error with type 'JSON:SCHEMA_NOT_HONOURED'. Reference: <https://docs.mulesoft.com/json-module/1.1/json-validate-schema>

NEW QUESTION # 48

An organization uses CloudHub to deploy all of its applications.

How can a common-global-handler flow be configured so that it can be reused across all of the organization's deployed applications?

- **A. Create a Mule Plugin project**
- B. Create a Mule plugin project

Create a common-global-error-handler flow inside the plugin project.

Use this plugin as a dependency in all Mule applications.

Import that configuration file in Mule applications.

- C. Create a common-global-error-handler flow in all Mule Applications Refer to it flow-ref wherever needed.

Answer: A

Explanation:

Create a common-global-error-handler flow inside the plugin project.

Use this plugin as a dependency in all Mule applications

D.

Create a Mule daman project.

Create a common-global-error-handler flow inside the domain project.

Use this domain project as a dependency.

Explanation:

To configure a common-global-handler flow that can be reused across all of the organization's deployed applications, the developer should create a Mule Plugin project, create a common-global-error-handler flow inside the plugin project, and use this plugin as a dependency in all Mule applications. This way, the developer can import the common-global-error-handler flow in any application that needs it and avoid duplicating the error handling logic. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#global-error-handler>

NEW QUESTION # 49

Refer to the exhibit.

What action must be performed to log all the errors raised by the VM Connector?

- A. Add `<AsyncLogger name='orgroute.extensions.vn' level=ERROR'/>` inside the Appenders tag
- B. Nothing, as error-level events are automatically logged
- C. Configure `<Logger level='ERROR'/>` inside the VM Connector configuration
- D. Add `<AsyncLogger name='orgroute.extensions.vn' level=ERROR'I>` inside the Logger tag

Answer: A

Explanation:

To log all the errors raised by the VM Connector, the developer needs to add an async logger with the name 'org.mule.extension.vn' and the level 'ERROR' inside the appenders tag of the log4j2.xml file. This will enable logging all error-level events generated by the VM Connector to the console appender. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/logging-in-mule#configuring-custom-logging-settings>

NEW QUESTION # 50

A Mule application includes a subflow containing a Scatter.Gather scope. Within each log of the Scatter.Gatter, an HTTP connector calls a PUT endpoint to modify records in different upstream system. The subflow is called inside an Unit successful scope to retry if a transitory exception is raised.

A technical spike is being performed to increase reliability of the Mule application.

Which steps should be performed within the Mule flow above the ensure idempotent behavior?

- A. Ensure an error-handling flow performs corrective actions to roll back all changes if any leg of the Scatter-Gather fails
- B. Change the PUT requests inside the Scatter-Gather to POST requests
- C. Remove the Put requests from the Scatter-Getter and perform them sequentially
- D. None, the flow already exhibits idempotent behavior

Answer: A

Explanation:

To ensure idempotent behavior within a Mule flow that contains a subflow with a Scatter-Gather scope, the developer should ensure an error-handling flow performs corrective actions to roll back all changes if any leg of the Scatter-Gather fails. Idempotency means that multiple identical requests have the same effect as a single request. Therefore, if one of the HTTP requests inside the Scatter-Gather fails, the error-handling flow should undo any changes made by other successful requests to ensure consistency and avoid partial updates. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/error-handling>

NEW QUESTION # 51

.....

if you want to have a better experience on the real exam before you go to attend it, you can choose to use the software version of our Mule-Dev-301 learning guide which can simulate the real exam, and you can download our Mule-Dev-301 exam prep on more than one computer. We strongly believe that the software version of our Mule-Dev-301 Study Materials will be of great importance for you to prepare for the exam and all of the employees in our company wish you early success.
