CompTIA CySA+ (CS0-002) Practice Exam 1

A cybersecurity analyst reviews the logs of a proxy server and saw the following URL, <https://www.google.com/search?q=%40diontraining.com>. Which of the following is true about the results of this search?

- A. Returns no useful results for an attacker
- B. Returns all web pages containing an email address affiliated with diontraining.com
- C. Returns all web pages hosted at diontraining.com
- D. Returns all web pages containing the text diontraining.com - ANSB. Returns all web pages containing an email address affiliated with diontraining.com

Google interprets this statement as <anything>@diontraining.com and understands that the user is searching for email addresses since %40 is the hex code for the @ symbol. The * is a wild card character meaning that any text could be substituted for the * in the query. This type of search would provide an attacker with a list of email addresses associated with diontraining.com, which could be used as part of a spear phishing campaign. To return all web pages hosted at diontraining.com, you should use the "site:" modifier in the query. To return all web pages with the text diontraining.com, enter "diontraining.com" into the Google search bar with no modifiers to return those results.

Protected health information (PHI) - ANSis defined as any information that identifies someone as the subject of medical and insurance records, plus their associated hospital and laboratory test results. This type of data is protected by the Health Insurance Portability and Accountability Act (HIPAA).

Which of the following types of data breaches would require that the US Department of Health and Human Services and the media be notified if more than 500 individuals are affected by a data breach?

- A. Trade secret information
- B. Protected health information
- C. Credit card information
- D. Personally identifiable information - ANSB. Protected health information

OBJ-5.1: Protected health information (PHI) is defined as any information that identifies someone as the subject of medical and insurance records, plus their associated hospital and laboratory test results. This type of data is protected by the Health Insurance Portability and Accountability Act (HIPAA). It requires notification of the individual, the Secretary of the US Department of Health and Human Services (HHS), and the media (if more than 500 individuals are affected) in the case of a data breach. Personally identifiable information (PII) is any data that can be used to identify, contact, or impersonate an individual. Credit card information is protected under the PCI DSS information security standard. Trade secret information is protected by the organization that owns those secrets.
