Some of the key areas that are tested include identity and access management architecture, identity governance, authentication and authorization, single sign-on (SSO), and federation. Identity-and-Access-Management-Architect Exam also covers topics such as user provisioning, password management, and identity lifecycle management.

## **Salesforce Certified Identity and Access Management Architect Sample Questions (Q110-Q115):**

### **NEW QUESTION # 110**

A global company is using the Salesforce Platform as an Identity Provider and needs to integrate a third-party application with its Experience Cloud customer portal.

Which two features should be utilized to provide users with login and identity services for the third-party application?

Choose 2 answers

- **A. Use the App Launcher with single sign-on (SSO).**
- B. External a Data source with Named Principal identity type.
- C. Use Delegated Authentication.
- **D. Use a connected app.**

**Answer: A,D**

Explanation:

Explanation

Using the App Launcher with SSO and using a connected app are two features that can be utilized to provide users with login and identity services for the third-party application. The App Launcher allows users to access multiple apps from one location with SSO. The connected app allows users to authorize access to the third-party application using OAuth 2.0. The other options are either not relevant or not applicable for this use case. References: App Launcher, Connected Apps

### **NEW QUESTION # 111**

Universal Containers (UC) is planning to deploy a custom mobile app that will allow users to get e-signatures from its customers on their mobile devices. The mobile app connects to Salesforce to upload the e-signature as a file attachment and uses OAuth protocol for both authentication and authorization. What is the most recommended and secure OAuth scope setting that an Architect should recommend?

- **A. Custom\_permissions**
- B. Web
- C. Id
- D. Api

**Answer: A**

### **NEW QUESTION # 112**

Northern Trail Outfitters (NTO) recently purchased Salesforce Identity Connect to streamline user provisioning across Microsoft Active Directory (AD) and Salesforce Sales Cloud.

NTO has asked an identity architect to identify which salesforce security configurations can map to AD permissions.

Which three Salesforce permissions are available to map to AD permissions?

Choose 3 answers

- A. Field-Level Security
- **B. Public Groups**

- C. Profiles and Permission Sets
- D. Roles
- E. Sharing Rules

**Answer: B,C,D**

Explanation:

Salesforce Identity Connect can map AD groups to Salesforce public groups, roles, profiles, and permission sets. These permissions control the access and visibility of data and features in Salesforce. References:

Salesforce Identity Connect Implementation Guide

### NEW QUESTION # 113

A client is planning to rollout multi-factor authentication (MFA) to its internal employees and wants to understand which authentication and verification methods meet the Salesforce criteria for secure authentication.

Which three functions meet the Salesforce criteria for secure mfa?

Choose 3 answers

- A. username and password + SMS passcode
- B. Lightning Login
- C. Username and password + security key
- D. Third-party single sign-on with Mobile Authenticator app
- E. Certificate-based Authentication

**Answer: B,C,D**

### NEW QUESTION # 114

Universal containers(UC) has implemented SAML-BASED single Sign-on for their salesforce application and is planning to provide access to salesforce on mobile devices using the salesforce1 mobile app. UC wants to ensure that single Sign-on is used for accessing the salesforce1 mobile app. Which two recommendations should the architect make? Choose 2 answers

- A. Use the existing SAML SSO flow along with user agent flow.
- B. Configure the embedded Web browser to use my domain URL.
- C. Configure the salesforce1 app to use the my domain URL
- D. Use the existing SAML SSO flow along with Web server flow

**Answer: B,C**

Explanation:

To use SAML SSO for accessing the Salesforce1 mobile app, the architect should recommend configuring the embedded web browser to use the My Domain URL and configuring the Salesforce1 app to use the My Domain URL<sup>4</sup>. Using the My Domain URL allows Salesforce to identify the identity provider and initiate the SSO process<sup>5</sup>. Using the existing SAML SSO flow along with user agent flow or web server flow is not necessary because Salesforce Mobile Applications only work with service provider initiated setups<sup>4,6</sup>.

Therefore, option B and D are the correct answers.
