

Managing-Cloud-Security Exam Objectives & Managing-Cloud-Security PDF Download

Managing Cloud Security - C838 Exam with Complete Answers

Broad network access - Answer-There should never be network bandwidth bottlenecks.

On-demand services - Answer-Refers to the model that allows customers to scale their compute and/or storage needs with little or no intervention from or prior communication with the provider.

Resource pooling - Answer-Characteristic that allows the cloud provider to meet various demands from customers while remaining financially viable.

measured/metered service - Answer-The customer is charged for only what they use and nothing more.

Business Impact Analysis (BIA) - Answer-An assessment of the priorities given to each asset and process within the organization

personally identifiable information (PII) - Answer-Under current laws, no cloud customer can transfer risk or liability associated with the inadvertent or malicious disclosure of <blank>.

Elasticity - Answer-This is the flexibility of allocating resources as needed for immediate usage, instead of purchasing resources according to other variables.

Simplicity - Answer-Usage and administration of cloud services ought to be transparent to cloud customers and users; from their perspective, a digital data service is paid for and can be used, with very little additional input other than what is necessary to perform their duties.

Scalability - Answer-The organization's computing needs won't remain static; there will be new (and hopefully more) users, customers, and data as the organization continually matures.

Infrastructure as a Service (IaaS) - Answer-The most basic of cloud service offerings, <blank> allows the customer to install all software, including operating systems (OSs) on hardware housed and connected by the cloud vendor.

Platform as a Service (PaaS) - Answer-<Blank> contains everything included in IaaS, with the addition of OSs.

Software as a Service (SaaS) - Answer-The cloud vendor becomes responsible for administering, patching, and updating software as well.

If you prepare for the Managing-Cloud-Security exam using our PDF4Test testing engine, it is easy and convenient to buy. Just two steps to complete your purchase, we will send the Managing-Cloud-Security product to your mailbox quickly. And you only need to download e-mail attachments to get your products.

In order to allow our customers to better understand our Managing-Cloud-Security quiz prep, we will provide clues for customers to download in order to understand our Managing-Cloud-Security exam torrent in advance and see if our products are suitable for you. As long as you have questions, you can send us an email and we have staff responsible for ensuring 24-hour service to help you solve your problems. If you use our Managing-Cloud-Security Exam Torrent, we will provide you with a comprehensive service to overcome your difficulties and effectively improve your ability. If you can take the time to learn about our Managing-Cloud-Security quiz prep, I believe you will be interested in our products. Our learning materials are practically tested, choosing our Managing-Cloud-Security exam guide, you will get unexpected surprise.

Managing-Cloud-Security PDF Download - Managing-Cloud-Security Valid Braindumps Pdf

In life we mustn't always ask others to give me something, but should think what I can do for others. At work if you can create a lot of value for the boss, the boss of course care about your job, including your salary. The same reason, if we are always a ordinary IT staff, then you will be eliminated sooner or later. We should pass the IT exams, and go to the top step by step. PDF4Test's WGU Managing-Cloud-Security Exam Materials can help you to find shortcut to success. There are a lot of IT people who have started to act. Success is in the PDF4Test WGU Managing-Cloud-Security exam training materials. Of course you can not miss it.

WGU Managing Cloud Security (JY02) Sample Questions (Q80-Q85):

NEW QUESTION # 80

A user creates new financial documents that will be stored in the cloud. Which action should the user take before uploading the documents to protect them against threats such as packet capture and on-path attacks?

- A. Metadata labeling
- B. Hashing
- C. Encryption
- D. Change tracking

Answer: C

Explanation:

Before transmitting sensitive financial data to the cloud, the best defense against interception threats like packet capture and man-in-the-middle attacks is encryption. Encryption protects data in transit by converting plain text into cipher text, which can only be deciphered with the correct keys.

Hashing provides integrity verification but does not secure confidentiality. Change tracking monitors modifications but does not prevent interception. Metadata labeling adds context but does not protect against on-path attackers.

Using strong encryption protocols (e.g., TLS) ensures that even if traffic is intercepted, the attacker cannot read the data. Encryption also aligns with compliance requirements such as PCI DSS, which mandates encryption for financial data during transmission. By encrypting before upload, the user ensures end-to-end confidentiality across potentially insecure networks.

NEW QUESTION # 81

A group of DevOps engineers adopted the network-as-code methodology to manage network infrastructure.

During a code release, the engineers find a bug that is causing issues on a production site. Which safeguard will allow the engineers to restore functionality to the production site?

- A. Rollback
- B. Staging
- C. Code testing
- D. Code review

Answer: A

Explanation:

A rollback is the safeguard that restores a system to its previous, stable state when a new code release introduces issues. In DevOps workflows, rollbacks provide a rapid recovery mechanism, reducing downtime and minimizing customer impact.

Staging, code review, and testing are preventive controls that reduce the likelihood of defects reaching production, but once a bug has already been deployed, rollback is the corrective control.

Rollback strategies often rely on version control systems, container orchestration, or infrastructure-as-code automation to quickly revert to earlier configurations. This practice is essential for maintaining reliability and availability, especially in cloud environments with continuous deployment pipelines.

NEW QUESTION # 82

Which type of data sanitization should be used to destroy data on a USB thumb drive while keeping the drive intact?

- A. Key revocation
- B. Physical destruction
- C. Degaussing
- D. Overwriting

Answer: D

Explanation:

The correct approach for sanitizing a USB thumb drive while preserving its usability is overwriting.

Overwriting involves replacing the existing data on the device with random data or specific patterns to ensure that the original information cannot be recovered. This process leaves the physical device intact, allowing it to be reused securely.

Physical destruction, such as shredding, renders the device unusable. Degaussing only works on magnetic media like hard disks or tapes, not on solid-state or flash-based USB drives. Key revocation applies to cryptographic keys and not to physical devices.

By using overwriting, organizations comply with data sanitization standards while balancing operational efficiency. Many tools exist that perform multi-pass overwrites to meet regulatory requirements such as those from NIST or ISO. This ensures that sensitive data is removed while allowing the device to remain in circulation for continued use.

NEW QUESTION # 83

An organization is implementing a new hybrid cloud deployment and wants all employees to provide a username, password, and security token before accessing any of the cloud resources. Which type of security control is the organization leveraging for its employees?

- A. Access control list (ACL)
- **B. Authentication**
- C. Web application firewall (WAF)
- D. Authorization

Answer: B

Explanation:

The requirement for a username, password, and security token describes authentication—the process of verifying the identity of a user. By requiring multiple factors (something you know + something you have), the organization is implementing multifactor authentication (MFA).

Authorization defines what resources a user can access after authentication. WAFs protect web applications, and ACLs specify rules for allowed or denied traffic, but neither validate user identity.

Authentication ensures that only legitimate users gain access to cloud resources. In hybrid environments, MFA is a strong safeguard against credential theft and phishing attacks, providing assurance that identities are genuine before authorization decisions are made.

NEW QUESTION # 84

An organization needs to provide space where security administrators can centrally monitor network traffic and events and respond to threats or outages. What should the organization create?

- A. Disaster response team (DRT)
- B. Network operations center (NOC)
- **C. Security operations center (SOC)**
- D. Emergency response team (ERT)

Answer: C

Explanation:

A Security Operations Center (SOC) is a centralized facility that allows administrators to monitor, detect, investigate, and respond to cybersecurity events in real time. SOC teams leverage tools such as SIEM (Security Information and Event Management), threat intelligence, and incident response playbooks.

ERTs and DRTs are teams focused on emergencies and disaster recovery, respectively, but they do not provide continuous monitoring. A NOC focuses on performance and availability of IT infrastructure but not on security threats.

By establishing a SOC, organizations ensure 24/7 visibility into security events, coordinated incident handling, and compliance with standards such as ISO 27001 and SOC 2. SOC's are essential in cloud environments where threats evolve rapidly, and centralized expertise is needed to minimize impact.

NEW QUESTION # 85

.....

Are you still silly to spend much time to prepare for your test but still fail again and again? Do you find that some candidates pass

exam easily with WGU Managing-Cloud-Security exam dumps questions? If your goal is passing exams and obtain certifications our Managing-Cloud-Security exam dumps can help you achieve your goal easily, why not choose us? Only dozen of money and 20-35 hours' valid preparation before the test with Managing-Cloud-Security Exam Dumps questions will make you clear exam surely. So why are you still wasting so many time to do useless effort?
