HP HPE7-A01 Dumps PDF Format

Passing HPE7-A01 Certification Exam is not an easy task? Choosing TestInsides HPE7-A01 exam training materials, passing HPE7-A01 exam is quite possible. TestInsides's HPE7-A01 exam training materials is the highly certified IT professionals' collection of experience and innovation results in this field, and have absolute authority. You won't regret to choose TestInsides.

HP HPE7-A01 Exam is intended for individuals who want to enhance their skills in designing and deploying wireless networks using Aruba products and technologies. Aruba Certified Campus Access Professional Exam certification program offers a comprehensive curriculum that prepares candidates to handle different scenarios and challenges that may arise in the process of deploying and managing wireless networks.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q106-Q111):

NEW QUESTION # 106

How does TACACS+ differ from RADIUS in authentication services?

- A. RADIUS supports only local authentication
- **B. TACACS+ encrypts the entire packet, while RADIUS encrypts only the password**
- C. TACACS+ requires less processing power than RADIUS
- D. RADIUS is used for device management, while TACACS+ is for Wi-Fi access

Answer: B

NEW QUESTION # 107

A customer wants to enable wired authentication across all their CX switches. One of the requirements is that the switch must be able to authenticate a single computer connected through a VoIP phone. Which feature should be enabled to support this requirement?

- A. Device-Based Mode
- **B. Multi-Domain Authentication**
- C. MAC Authentication
- D. Multi-Auth Mode

Answer: B

Explanation:

Multi-Domain Authentication is the feature that should be enabled to support the requirement that the switch must be able to authenticate a single computer connected through a VoIP phone. Multi-Domain Authentication is a feature that allows an Aruba CX switch to apply different authentication methods and policies to different devices connected to the same port. For example, a VoIP phone and a computer can be connected to the same port using a single cable, but they can be authenticated separately using different credentials and assigned to different VLANs. The other options are incorrect because they either do not support multiple devices on the same port or do not provide authentication.

NEW QUESTION # 108

On AOS10 Gateways, which device persona is only available when configuring a Gateway-only group?

- A. Branch
- B. Edge
- C. Mobility
- **D. VPN Concentrator**

Answer: D

Explanation:

VPN Concentrator is the device persona that is only available when configuring a Gateway-only group on AOS10 Gateways. A device persona defines the role and functionality of a Gateway in a network. A Gateway-only group is a group that contains only Gateways and no APs. A VPN Concentrator persona enables a Gateway to terminate VPN tunnels from remote APs or clients and provide secure access to corporate resources. The other options are incorrect because they are either not device personas or not exclusive to Gateway-only groups.

NEW QUESTION # 109

What is enabled by LLDP-MED? (Select two.)

- A. iSCSI client devices can set the required MTU setting for the port.
- **B. Voice VLANs can be automatically configured for VoIP phones**
- **C. APs can request power as needed from PoE-enabled switch ports**
- D. iSCSI client devices can request to have flow control enabled
- E. GVRP VLAN information can be used to dynamically add VLANs to a trunk

Answer: B,C

Explanation:

These are two benefits enabled by LLDP-MED (Link Layer Discovery Protocol - Media Endpoint Discovery).

LLDP-MED is an extension of LLDP that provides additional capabilities for network devices such as VoIP phones and APs. One of the capabilities is to automatically configure voice VLANs for VoIP phones, which allows them to be placed in a separate VLAN from data devices and receive QoS and security policies.

Another capability is to request power as needed from PoE-enabled switch ports, which allows APs to adjust their power consumption and performance based on the available power budget. The other options are incorrect because they are either not enabled by LLDP-MED or not related to LLDP-MED. References:

NEW QUESTION # 110

You are proposing new CX 8360 VSX switches to replace a customer's existing core switches.

The customer is concerned about the possibility of a split-brain scenario between the VSX pair.

How is the VSX pair affected when the ISL is down and keepalive is up?

- **A. The VSX pair is not at risk.**
- B. The VSX LAGs are in a degraded state.
- C. The VSX pair is out-of-sync.
- D. The VSX pair nodes are still forwarding traffic.

Answer: A
