

# Google Professional-Cloud-Architect Exam Questions - Tips To Pass

The infographic is titled "4 Tips to Pass Google Professional Cloud Architect (GCP-PCA) Exam in One Attempt". It features a large number "4" in a white box at the top center, flanked by two open book icons. Below the title, there are four numbered tips, each with a corresponding colored hexagon icon:

- 1 Take Help from the Community**  
There are hundreds of chat groups or communities online. Take help from them if you have any questions about the exam, preparations, or anything else. This is an effective and quick method to get information.
- 2 Gain Experience from Other Candidates**  
Some candidates have just passed GCP-PCA exam. And then some like to share their experiences. If you search online, you will get many blogs and article sites where people are giving their preparation methods. Find out if one of them changes you too!
- 3 Test Your Skill Before Taking Practice Exam**  
It is not sufficient to fulfill all requirements. Before you go and take the exam, test your skills. The good idea is to attempt mock exams. This easy to use Google Professional Cloud Architect Practice Tests can help you learn so much about your GCP-PCA exam.
- 4 Do Not Forget The Revision!**  
Last but not least is the last-minute revisions. Do not miss out on this one, going through all the Google Professional Cloud Architect questions is a must.

At the bottom of the infographic, there is a logo for "vmexam.com" with the tagline "#1 Cloud and VM Certification Guide" and social media icons for Facebook, Instagram, Twitter, YouTube, and LinkedIn.

BraindumpStudy is intent on keeping up with the latest technologies and applying them to the exam questions and answers not only on the content but also on the displays. That is why our pass rate is high as 98% to 100%. The data are unique-particular in this career. With our Professional-Cloud-Architect study torrent, you can enjoy the leisure study experience as well as pass the Professional-Cloud-Architect Exam with success ensured. For the content of our Professional-Cloud-Architect preparation materials is simplified by our professional experts and the displays are designed effectually. Just try and enjoy it!

Google Professional-Cloud-Architect certification is an excellent way for professionals to enhance their career prospects in the cloud computing industry. It demonstrates to potential employers that the individual has the skills and knowledge required to design, develop, and manage cloud-based solutions on the Google Cloud Platform. It also helps professionals stand out from their peers and demonstrates their commitment to learning and staying up-to-date with the latest cloud computing technologies.

Google Professional-Cloud-Architect certification exam is rigorous and comprehensive, consisting of multiple-choice and scenario-based questions. Professional-Cloud-Architect Exam assesses the candidates' ability to design, develop, and manage GCP solutions that meet the business and technical requirements of their organizations. Google Certified Professional - Cloud Architect (GCP) certification exam covers a broad range of topics, including GCP infrastructure, networking, security, data storage, analytics, and machine learning. Passing the exam demonstrates the candidate's proficiency in GCP and validates their ability to design, develop, and manage GCP solutions at an expert level.

## Get Up to 365 Days of Free Updates Google Professional-Cloud-Architect Questions and Free Demo

Are you worried about where to find reliable and valid Professional-Cloud-Architect practice exam cram? Please stop hunting with aimless, Google Professional-Cloud-Architect free study dumps will help you and solve your problems. If you still have doubts, you can download Professional-Cloud-Architect free demo to have a try. If you have any questions about Professional-Cloud-Architect Study Tool, please contact us by email or chat with our online customer service, we will always here to answers your questions. Our Professional-Cloud-Architect test practice will enhance your professional skills and expand your knowledge, which will ensure you a define success in our Professional-Cloud-Architect actual test.

To pass the Google Professional-Cloud-Architect certification exam, candidates need to demonstrate a deep understanding of GCP services and their use cases, as well as the ability to design and implement solutions that meet specific business requirements. Professional-Cloud-Architect exam consists of multiple-choice and scenario-based questions, and candidates have two hours and thirty minutes to complete it. Google Certified Professional - Cloud Architect (GCP) certification is valid for two years and requires recertification to maintain its validity. By earning the Google Professional-Cloud-Architect Certification, professionals can demonstrate their expertise in cloud architecture and distinguish themselves in the job market.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q222-Q227):

### NEW QUESTION # 222

A news teed web service has the following code running on Google App Engine. During peak load, users report that they can see news articles they already viewed. What is the most likely cause of this problem?

```
import news
from flask import Flask, redirect, request
from flask.ext.api import status
from google.appengine.api import users

app = Flask(__name__)
sessions = {}

@app.route("/")
def homepage():
    user = users.get_current_user()
    if not user:
        return "Invalid login",
        status.HTTP_401_UNAUTHORIZED

    if user not in sessions:
        sessions[user] = { "viewed": [] }

    news_articles = news.get_news(user,
        sessions[user]["viewed"])
    sessions[user]["viewed"] += [news_article
        in news_articles]

    return news.render(news_articles)

if __name__ == "__main__":
    app.run()
```

- A. The URL of the API needs to be modified to prevent caching.
- B. The HTTP Expires header needs to be set to -1 to stop caching.

- C. The session variable is local to just a single instance.
- D. The session variable is being overwritten in Cloud Datastore.

Answer: D

#### NEW QUESTION # 223

An application development team believes their current logging tool will not meet their needs for their new cloud-based product. They want a better tool to capture errors and help them analyze their historical log data. You want to help them find a solution that meets their needs, what should you do?

- A. Help them define their requirements and assess viable logging tools.
- B. Send them a list of online resources about logging best practices.
- C. Help them upgrade their current tool to take advantage of any new features.
- D. Direct them to download and install the Google StackDriver logging agent.

Answer: C

#### NEW QUESTION # 224

A news feed web service has the following code running on Google App Engine. During peak load, users report that they can see news articles they already viewed. What is the most likely cause of this problem?

```
import news
from flask import Flask, redirect, request
from flask.ext.api import status
from google.appengine.api import users

app = Flask(__name__)
sessions = {}

@app.route("/")
def homepage():
    user = users.get_current_user()
    if not user:
        return "Invalid login",
status.HTTP_401_UNAUTHORIZED

    if user not in sessions:
        sessions[user] = {"viewed": []}

    news_articles = news.get_new_news (user, sessions [user]
["viewed"])
    sessions [user] ["viewed"] += [n["id"] for n
in news_articles]

    return news.render(news_articles)

if __name__ == "__main__":
    app.run()
```

- A. The URL of the API needs to be modified to prevent caching.
- **B. The session variable is local to just a single instance.**
- C. The HTTP Expires header needs to be set to -1 to stop caching.
- D. The session variable is being overwritten in Cloud Datastore.

**Answer: B**

Explanation:

<https://stackoverflow.com/questions/3164280/google-app-engine-cache-list-in-session-variable?rq=1>

### NEW QUESTION # 225

A lead software engineer tells you that his new application design uses websockets and HTTP sessions that are not distributed across the web servers. You want to help him ensure his application will run properly on Google Cloud Platform. What should you do?

- A. Help the engineer redesign the application to use a distributed user session service that does not rely on websockets and HTTP sessions.
- **B. Meet with the cloud operations team and the engineer to discuss load balancer options.**
- C. Review the encryption requirements for websocket connections with the security team.
- D. Help the engineer to convert his websocket code to use HTTP streaming.

**Answer: B**

Explanation:

Google Cloud Platform (GCP) HTTP(S) load balancing provides global load balancing for HTTP(S) requests destined for your instances.

The HTTP(S) load balancer has native support for the WebSocket protocol.

Incorrect Answers:

A: HTTP server push, also known as HTTP streaming, is a client-server communication pattern that sends information from an HTTP server to a client asynchronously, without a client request.

A server push architecture is especially effective for highly interactive web or mobile applications, where one or more clients need to receive continuous information from the server.

### NEW QUESTION # 226

Your company has just acquired another company, and you have been asked to integrate their existing Google Cloud environment into your company's data center. Upon investigation, you discover that some of the RFC 1918 IP ranges being used in the new company's Virtual Private Cloud (VPC) overlap with your data center IP space. What should you do to enable connectivity and make sure that there are no routing conflicts when connectivity is established?

- A. Create a Cloud VPN connection from the new VPC to the data center, create a Cloud Router, and apply a custom route advertisement to block the overlapping IP space.
- B. Create a Cloud VPN connection from the new VPC to the data center, and apply a firewall rule that blocks the overlapping IP space.
- C. Create a Cloud VPN connection from the new VPC to the data center, and create a Cloud NAT instance to perform NAT on the overlapping IP space.
- **D. Create a Cloud VPN connection from the new VPC to the data center, create a Cloud Router, and apply new IP addresses so there is no overlapping IP space.**

**Answer: D**

Explanation:

Explanation

To connect two networks together we need (1) either VPN or interconnect and (2) peering. When there is peering, you cannot have conflicting IP addresses. You can use either Cloud VPN or Cloud Interconnect to securely connect your on-premises network to your VPC network.

(<https://cloud.google.com/vpc/docs/vpc-peering#transit-network>) At the time of peering, Google Cloud checks to see if there are any subnet IP ranges that overlap subnet IP ranges in the other network. If there is any overlap, peering is not established.

(<https://cloud.google.com/vpc/docs/vpc-peering#considerations>) NAT is used to translate private to public IP and vice versa,

however because we are connecting 2 networks together, they become private IPs. So it is not applicable.
