FCP_FAZ_AN-7.4 Exam Study Guide & FCP_FAZ_AN-7.4 Valid

Braindumps Sheet

Our products are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our study materials is the highest in the market. There are thousands of customers have passed their exam and get the related certification. After that, all of their FCP_FAZ_AN-7.4 Exam torrents were purchase on our website. In fact, purchasing our FCP_FAZ_AN-7.4 actual test means you have been half success. Good decision is of great significance if you want to pass the FCP_FAZ_AN-7.4 exam for the first time.

Fortinet FCP - FortiAnalyzer 7.4 Analyst Sample Questions (Q18-Q23):

NEW QUESTION # 18

You created a playbook on FortiAnalyzer that uses a FortiOS connector.

When configuring the FortiGate side, which type of trigger must be used so that the actions in an automation stitch are available in the FortiOS connector?

- A. FortiAnalyzer Event Handler
- **B. Incoming webhook**
- C. FortiOS Event Log
- D. Fabric Connector event

Answer: B

Explanation:

When using FortiAnalyzer to create playbooks that interact with FortiOS devices, an Incoming Webhook trigger is required on the FortiGate side to make the actions in an automation stitch accessible through the FortiOS connector. The incoming webhook trigger allows FortiAnalyzer to initiate actions on FortiGate by sending HTTP POST requests to specified endpoints, which in turn trigger automation stitches defined on the FortiGate.

Here's an analysis of each option:

Option A: FortiAnalyzer Event Handler

This is incorrect. The FortiAnalyzer Event Handler is used within FortiAnalyzer itself for handling log events and alerts, but it does not trigger automation stitches on FortiGate.

Option B: Fabric Connector event

This is incorrect. Fabric Connector events are related to Fortinet's Security Fabric integrations but are not specifically used to trigger FortiGate automation stitches from FortiAnalyzer.

Option C: FortiOS Event Log

This is incorrect. While FortiOS event logs can be used for monitoring, they are not designed to trigger automation stitches directly from FortiAnalyzer.

Option D: Incoming webhook

This is correct. The Incoming Webhook trigger on FortiGate enables it to receive requests from FortiAnalyzer, allowing playbooks to activate automation stitches defined on the FortiGate device. This method is commonly used to integrate actions from FortiAnalyzer to FortiGate via the FortiOS connector.

NEW QUESTION # 19

Which two statements about exporting and importing playbacks are true? (Choose two.)

- **A. You can import a playbook even if there is another one with the same name in the destination**
- B. Playbooks can so imported 10 a different FortiAnalyzer device, but only if the connectors already exist
- **C. You can export only one playbook at a time.**
- D. A playbook that was disabled when it was exported mil be disabled when it is imported.

Answer: A,C

NEW QUESTION # 20

Which statement about sending notifications with incident update is true?

- A. Notifications can be sent only when an incident is updated or deleted.
- B. If you use multiple fabric connectors, all connectors must have the same settings.
- **C. You can send notifications to multiple external platforms.**

- D. Notifications can be sent only by email.

Answer: C

Explanation:

In FortiOS and FortiAnalyzer, incident notifications can be sent to multiple external platforms, not limited to a single method such as email. Fortinet's security fabric and integration capabilities allow notifications to be sent through various fabric connectors and third-party integrations. This flexibility is designed to ensure that incident updates reach relevant personnel or systems using preferred communication channels, such as email, Syslog, SNMP, or integration with SIEM platforms.

Let's review each answer option for clarity:

* Option A: You can send notifications to multiple external platforms

* This is correct. Fortinet's notification system is capable of sending updates to multiple platforms, thanks to its support for fabric connectors and external integrations. This includes options such as email, Syslog, SNMP, and others based on configured connectors.

* Option B: Notifications can be sent only by email

* This is incorrect. Although email is a common method, FortiOS and FortiAnalyzer support multiple notification methods through various connectors, allowing notifications to be directed to different platforms as per the organization's setup.

* Option C: If you use multiple fabric connectors, all connectors must have the same settings

* This is incorrect. Each fabric connector can have its unique configuration, allowing different connectors to be tailored for specific notification and integration requirements.

* Option D: Notifications can be sent only when an incident is updated or deleted

* This is incorrect. Notifications can be sent upon the creation of incidents, as well as upon updates or deletion, depending on the configuration.

* According to FortiOS and FortiAnalyzer 7.4.1 documentation, notifications for incidents can be configured across various platforms by using multiple connectors, and they are not limited to email alone. This capability is part of the Fortinet Security Fabric, allowing for a broad range of integrations with external systems and platforms for effective incident response.

NEW QUESTION # 21

Which statements are correct regarding FortiAnalyzer reports? (Choose two)

- A. FortiAnalyzer allows you to schedule reports to run.
- B. FortiAnalyzer provides the ability to create custom reports.
- C. FortiAnalyzer allows reporting for FortiGate devices only.
- D. FortiAnalyzer includes pre-defined reports only.

Answer: A,B

NEW QUESTION # 22

You created a playbook on FortiAnalyzer that uses a FortiOS connector.

When configuring the FortiGate side, which type of trigger must be used so that the actions in an automation stitch are available in the FortiOS connector?

- A. FortiAnalyzer Event Handler
- B. Incoming webhook
- C. FortiOS Event Log
- D. Fabric Connector event

Answer: B

Explanation:

When using FortiAnalyzer to create playbooks that interact with FortiOS devices, an Incoming Webhook trigger is required on the FortiGate side to make the actions in an automation stitch accessible through the FortiOS connector. The incoming webhook trigger allows FortiAnalyzer to initiate actions on FortiGate by sending HTTP POST requests to specified endpoints, which in turn trigger automation stitches defined on the FortiGate.

Here's an analysis of each option:

* Option A: FortiAnalyzer Event Handler

* This is incorrect. The FortiAnalyzer Event Handler is used within FortiAnalyzer itself for handling log events and alerts, but it does not trigger automation stitches on FortiGate.

* Option B: Fabric Connector event

- * This is incorrect. Fabric Connector events are related to Fortinet's Security Fabric integrations but are not specifically used to trigger FortiGate automation stitches from FortiAnalyzer.
- * Option C: FortiOS Event Log
- * This is incorrect. While FortiOS event logs can be used for monitoring, they are not designed to trigger automation stitches directly from FortiAnalyzer.
- * Option D: Incoming webhook
- * This is correct. The Incoming Webhook trigger on FortiGate enables it to receive requests from FortiAnalyzer, allowing playbooks to activate automation stitches defined on the FortiGate device. This method is commonly used to integrate actions from FortiAnalyzer to FortiGate via the FortiOS connector.
- * According to FortiOS and FortiAnalyzer documentation, when integrating FortiAnalyzer playbooks with FortiGate automation stitches, the recommended trigger type on FortiGate is an Incoming Webhook, allowing FortiAnalyzer to interact with FortiGate's automation framework through the FortiOS connector.

NEW QUESTION # 23

.....

The latest FCP - FortiAnalyzer 7.4 Analyst FCP_FAZ_AN-7.4 exam and exam study guide is reliable, FCP - FortiAnalyzer 7.4 Analyst FCP_FAZ_AN-7.4 with reasonable exam price and guaranteed questions answers. Fortinet offers actual FCP - FortiAnalyzer 7.4 Analyst to sure your success in FCP_FAZ_AN-7.4 Exam. Don't worry, this FCP - FortiAnalyzer 7.4 Analyst FCP_FAZ_AN-7.4 test price is benefit and content is 365 days updates!
