CWNP CWDP-305 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Deploy the WLAN: This section of the exam measures the skills of a WLAN Implementation Specialist and involves overseeing the deployment phase of wireless networks. It focuses on understanding deployment procedures for various WLAN architectures, configuring supporting infrastructure, and verifying proper installation. The section also addresses physical installation checks, documentation handover, and quality assurance practices during ongoing installations.
主題 2	<ul style="list-style-type: none">Define Specifications for the WLAN: This section of the exam measures the skills of a Wireless Network Planner and focuses on gathering business and technical requirements needed for designing wireless LANs. It includes understanding user needs, regulatory and safety constraints, and environmental factors. Candidates are expected to identify critical elements such as coverage, capacity, security, and device compatibility, and to analyse existing infrastructure and documentation to ensure a successful design strategy.
主題 3	<ul style="list-style-type: none">Validate and Optimize the WLAN: This section of the exam measures the skills of a WLAN Optimization Specialist and assesses the ability to test, validate, and fine-tune wireless networks post-deployment. Key tasks include RF validation surveys, performance testing, troubleshooting connectivity and security issues, and applying appropriate physical or RF adjustments. It also involves client testing and final project handover, including documentation, knowledge transfer, and meetings to ensure long-term WLAN success.
主題 4	<ul style="list-style-type: none">Design the WLAN: This section of the exam measures the skills of a WLAN Design Engineer and covers the process of selecting configurations, architecture types, and wireless components to meet business and technical requirements. It includes using design software, selecting access points and antennas, and applying methodologies such as predictive or measured design. Candidates must demonstrate the ability to produce effective documentation and configure features like QoS, roaming security, and network services for different types of client devices and applications.

問題 #116

You're preparing to perform a site survey for a company that processes meat. Some areas are restricted due to high-security. What do you have to do in order to proceed with the site survey?

- A. Just begin the survey, they will understand
- **B. Gain appropriate access and clearance to perform the site survey.**
- C. Ensure that you and your team are using food industry approved USB adapters for the survey.
- D. Gain meat processing access certification from the FDA.

答案: B

問題 #117

While conducting a site survey in a heavy machinery repair facility, what essential gear should you use for safety in this challenging environment?

- A. Low gain antennas
- **B. Personal Protective Equipment (PPE)**
- C. Indoor APs
- D. Low power APs

答案: B

解題說明:

Conducting site surveys in environments like heavy machinery repair facilities presents unique safety challenges. These areas may have hazards such as moving equipment, loud noises, and airborne particles. To ensure personal safety, surveyors must wear Personal Protective Equipment (PPE), which may include hard hats, safety glasses, ear protection, and steel-toed boots.

The CWDP-305 exam objectives emphasize the importance of safety during site surveys, stating the need to:

"Select and use appropriate design methodologies... Cameras; Personal Protective Equipment (PPE)." nwexam.com This underscores the necessity of PPE in certain survey environments.

Options like low gain antennas, low power APs, and indoor APs pertain to technical aspects of the survey but do not address the safety requirements of the surveyor.

問題 #118

You have enabled IEEE 802.11r FT (Fast Transition) in your WLAN infrastructure. You want to verify roaming between APs (two at a time) and determine if all of your endpoints are capable of performing fast roaming. What tool would you use to achieve this goal?

- A. Predictive design tool and two Wi-Fi adapters (one for each band)
- **B. Protocol Analyzer and two Wi-Fi adapters (one for each channel of the chosen bands)**
- C. WLAN scanner/discovery tool and two Wi-Fi adapters (one for each channel of the chosen bands)
- D. RF Spectrum Analyzer and two spectrum adapters (one for each band)

答案: B

解題說明:

To validate fast roaming (802.11r), a protocol analyzer is required to capture authentication frames and reassociation frames between APs. These allow you to verify if fast BSS transitions are occurring and if the endpoint is participating in FT.

From CWDP-305:

"Fast BSS Transition (802.11r) validation requires capturing EAP exchanges and reassociation frames during roaming. A protocol analyzer with multiple adapters can monitor channels simultaneously during transitions."

問題 #119

When troubleshooting coverage issues for a wireless network as it appears to new client associations, you should perform which type of survey?

Response:

- A. Predictive survey
- **B. Passive survey**
- C. A survey is not necessary.
- D. Active survey

答案: B

問題 #120

Who should be in the final meeting from the customer-side after successfully implementing a WLAN infrastructure?

- A. Remote workers
- **B. End-users**
- C. CEO or CFO
- D. The customer's customers

答案: B
