SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q21-Q26):

NEW QUESTION # 21
What must a data model contain in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- A. Hierarchies
- B. Dimensions
- C. Calculations
- D. Measures

Answer: B,D

Explanation:
In SAP Analytics Cloud, a data model must contain at least "Dimensions" and "Measures" to be functional. Dimensions are the qualitative aspects of the data (e.g., time, geography, product categories) that provide the context for analysis. Measures, on the other hand, are the quantitative data points (e.g., sales, costs, quantities) that are analyzed within the context provided by dimensions. Both are fundamental components of a data model, enabling structured data analysis and reporting.

NEW QUESTION # 22
You import data into a dataset. One of the columns imported is Year, and SAP Analytics Cloud interprets it as a measure. How can you ensure that it is treated as a calendar year?

- A. Change the Year measure to a dimension in the dataset.
- B. Includes the Year measure in a level-based time hierarchy in the dataset.
- C. Insert a character into the Year measure using the transform bar.
- D. Add the month as a suffix to the Year measure.

Answer: A

Explanation:
If SAP Analytics Cloud interprets a 'Year' column as a measure instead of a dimension, it should be changed to a dimension to ensure it is treated as a calendar year. This adjustment can be made within the model or dataset settings, where the column's role can be switched from a measure (quantitative value) to a dimension (qualitative value). Treating 'Year' as a dimension allows it to be used appropriately in time-based analyses, such as trends over time, without being aggregated like a numerical measure.

NEW QUESTION # 23
The SAP Analytics Cloud (SAC) modeler has removed the first three characters from an SAP Analytics Cloud public dimension imported from a source system. What is impacted by this change?

- A. Public datasets
- B. Source system
- C. Embedded data sets
- D. Stories

Answer: D

Explanation:
When the SAP Analytics Cloud (SAC) modeler removes the first three characters from a public dimension imported from a source system, this change impacts Stories that use this dimension. Specifically, any visualizations, calculations, or filters within those stories that rely on the original dimension values may need to be adjusted to account for the change. This modification does not affect the source system or public datasets directly, but it can impact how the data appears and behaves in stories that use the modified dimension.
