GH-100 Reliable Test Voucher | GH-100 Certification Training

There is a ton of GitHub Administration (GH-100) prep material available on the internet. But the main thing to notice is their validity and reliability. Many applicants remain unsuccessful in locating the right GitHub Administration (GH-100) practice test and lose their time and money.

Microsoft GitHub Administration Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are using GitHub-hosted runners and need to securely deploy to an internal system. The security team requires that these runners use IP address ranges that would not be shared with other companies. Which of the following approaches would meet their requirements?

- A. GitHub-hosted larger runners with Azure private networking
- **B. GitHub-hosted larger runners with static IP addresses**
- C. GitHub-hosted standard runners, using the IP addresses provided in "actions" from <https://api.github.com/meta>
- D. GitHub-hosted standard runners, using the IP addresses provided in "api" from <https://api.github.com/meta>

Answer: B

Explanation:

GitHub's larger runners let you reserve dedicated static IP addresses for your workflows - so you can allow-list those IPs in your firewall and be sure they aren't shared with any other tenant.

NEW QUESTION # 24

How does GitHub support compliance requirements for enterprises?

- A. GitHub disables all external collaboration features.
- **B. GitHub provides configurable controls such as an audit log, SAML authentication, and enterprise rulesets.**
- C. GitHub automatically encrypts user passwords in plaintext for quick access.
- D. GitHub only allows those with repository owner (admin) permissions to write changes to repositories.

Answer: B

Explanation:

GitHub Enterprise gives you a suite of configurable controls - like a comprehensive audit log, enforced SAML single sign-on, and enterprise-level rulesets - that you can tailor and enforce to meet your organization's compliance mandates.

NEW QUESTION # 25

Which events from the audit log are exposed by the GraphQL API? Each answer presents a complete solution. (Choose three.)

- A. pushes to repositories
- **B. promoting users to administrators**
- C. cloning of repositories
- **D. changes in permissions**
- **E. changes to permissions of a GitHub App**

Answer: B,D,E

Explanation:

The GraphQL Audit Log API surfaces entries whenever repository or organization permissions are changed ("Changes permissions").

It records when users are elevated to administrative roles ("Promotes users to admin").

It logs alterations to a GitHub App's granted permissions ("Changes permissions of a GitHub App").

NEW QUESTION # 26

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. OAuth tokens
- **B. GitHub App Installation Access Tokens**
- C. Device Tokens
- D. Personal Access Tokens (PATs)

Answer: B

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

NEW QUESTION # 27

You need GitHub to automatically notify a third-party service any time a new repository is created. You want to avoid writing custom code. The vendor has told you that they have a tool in the GitHub Marketplace. Which type of tool do you need?

- A. GitHub Models
- **B. GitHub App**
- C. GitHub Action
- D. GitHub Copilot Extension

Answer: B

You need a GitHub App. Marketplace integrations that listen for events like `repository.created` and send notifications are delivered as GitHub Apps, since they can subscribe to organization-level webhooks without you writing custom code.
