To make sure your possibility of passing the certificate, we hired first-rank experts to make our ITFAS-Level-1 exam materials. So the proficiency of our team is unquestionable. They help you to review and stay on track without wasting your precious time on useless things. By handpicking what the ITFAS-Level-1 study questions usually tested in exam and compile them into our ITFAS-Level-1 practice guide, they win wide acceptance with first-rank praise.

These Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) exam questions are available at an affordable cost and cover current sections of the actual Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) Exam Questions. Therefore, relying on ValidBrindumps NICET ITFAS-Level-1 exam dumps will ensure that you crack the actual ITFAS-Level-1 certification exam on the first attempt. For the trouble-less Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) exam preparation of customers, we have designed these three formats of the Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) exam prep material: PDF, desktop practice test software, and web-based practice exam software. You can read the characteristics of these three versions of the Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) practice test material below.

## ITFAS-Level-1 Valid Dumps & ITFAS-Level-1 Pdf Dumps

It is a popular belief that only professional experts can be the leading one to do some adept job. And similarly, only high quality and high accuracy ITFAS-Level-1 Exam Questions like ours can give you confidence and reliable backup to get the certificate smoothly because our experts have extracted the most frequent-tested points for your reference. Good practice materials like our Inspection and Testing of Fire Alarm Systems Level I Exam study question can educate exam candidates with the most knowledge. Do not make your decisions now will be a pity for good.

### NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q70-Q75):

#### NEW QUESTION # 70

Which of the following is the inspection frequency of the candela rating of visible appliances?

- A. Initial acceptance and no further inspections
- B. Initial acceptance and semiannually
- C. Initial acceptance and quarterly
- D. Initial acceptance and if a malfunction occurs

**Answer: D**

Explanation:

Candela ratings are visually confirmed during initial acceptance. Further inspection is required only if a device malfunction occurs or an acceptance test is performed.

NFPA 72 (2022), Section 18.5.5.7:

"The candela rating shall be verified at initial acceptance and when there is reason to believe the device is not operating properly."

#### NEW QUESTION # 71

When is the elevator recall permitted to send a supervisory signal in lieu of an alarm signal?

- A. Where approved by the system designer
- B. Where approved by the building owner
- C. Where approved by the insurance company
- D. Where approved by the authority having jurisdiction

**Answer: D**

Explanation:

Elevator recall typically generates an alarm signal, but under specific circumstances, the AHJ may approve the use of a supervisory signal instead.

NFPA 72 (2022), Section 21.3.3.3 (Exception):

"Where permitted by the AHJ, activation of elevator recall initiating devices shall be permitted to result in a supervisory signal." This allows flexibility with AHJ approval, not at the discretion of designers or owners.

Correct answer: A. Where approved by the authority having jurisdiction

#### NEW QUESTION # 72

Smoke detector activation in the ninth-floor elevator lobby shall activate which of the following functions?

- A. Ninth-floor trouble signal
- B. Alternate level recall
- C. Designated level recall
- D. Ninth-floor supervisory signal

**Answer: C**

Explanation:

The designated level recall function is triggered when a smoke detector is activated in that same elevator lobby. This returns the elevator to that floor (usually the ground or main level) for emergency evacuation, unless smoke is present there, in which case the alternate recall floor is used.

NFPA 72 (2022), Section 21.3.3.1:

"Activation of the smoke detector installed at the designated level shall cause all elevators that serve that level to return to an alternate level." But:

"Smoke detector activation in any other elevator lobby shall recall elevators to the designated level." So:

\* If smoke is in the ninth-floor lobby, and that lobby is not the designated level # elevator recalls to designated level.

\* Therefore, activation of the ninth-floor smoke detector (not the designated level) causes designated level recall.

Correct answer: B. Designated level recall

### NEW QUESTION # 73

Within what time limit shall a sprinkler waterflow alarm-initiating device activate?

- A. 100 seconds
- B. 180 seconds
- C. 90 seconds
- D. 120 seconds

**Answer: D**

Explanation:

NFPA 72 defines a time requirement for how quickly a waterflow switch must respond when a sprinkler system activates. The waterflow initiating device (typically a paddle-type switch) must send an alarm within 90 seconds, but the system may have a retard delay of up to 90 seconds, making the total allowable time 120 seconds.

NFPA 72 (2022), Section 17.13.2:

"Waterflow alarm-initiating devices shall be set to operate within 90 seconds after the flow begins. Retard devices shall not delay the signal more than an additional 90 seconds." Thus, the maximum total activation time is:

90 seconds operation + 90 seconds retard = 120 seconds max

Correct answer: C. 120 seconds

### NEW QUESTION # 74

Which three of the following branch circuit characteristics are required for circuit identification and accessibility of the fire alarm equipment's primary power supply? (Choose three.)

- A. Where a circuit breaker is the disconnecting means, a breaker locking device shall be labeled.
- B. The system circuit disconnect shall be permanently identified as "Fire Alarm."
- C. The system circuit disconnect shall be permanently identified at the control unit.
- D. Where a circuit breaker is the disconnecting means, a breaker locking device shall be installed.

**Answer: B,C,D**

Explanation:

NFPA 72 requires strict identification and protection of the primary power supply circuit to the fire alarm control unit (FACU) to prevent unauthorized disconnection.

NFPA 72 (2022), Section 10.6.5.2.1:

"The circuit disconnecting means shall be identified as 'FIRE ALARM CIRCUIT' at the point of disconnect and at the fire alarm control unit." Section 10.6.5.2.2:

"A circuit breaker used as the disconnecting means shall be protected from unauthorized operation by a locking device." There is no requirement for the locking device to be labeled - it only must be installed.

Correct answers:

\* The system circuit disconnect shall be permanently identified as "Fire Alarm."

\* The system circuit disconnect shall be permanently identified at the control unit.

\* Where a circuit breaker is the disconnecting means, a breaker locking device shall be installed.

### NEW QUESTION # 75

.....

Do you want to pass your exam just one time? If you do, then you can choose us, we can help you pass the exam just one time. With experienced experts to compile and verify ITFAS-Level-1 training materials, the quality can be guaranteed. We also pass guarantee and money back guarantee if you fail to pass the exam. You can obtain the download link and password for ITFAS-Level-1 Exam Dumps within ten minutes, so that you can start your learning immediately. We have online and offline service, and the staff possess the professional knowledge for ITFAS-Level-1 exam dumps, if you have any questions, you can have a conversation with us.
