Managing time during the SAP C-BW4H-2505 exam is a challenging task. Most candidates cannot manage their time during the SAP C-BW4H-2505 exam, leave the questions, and fail. Time management skills can help students gain excellent marks in the C-BW4H-2505 Exam. SAP C-BW4H-2505 practice exam on the software help you identify which kind of C-BW4H-2505 questions are more time-consuming, and they would be able to assess their efficiency in answering questions.

## SAP C-BW4H-2505 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>SAP BW</li><li>4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW</li><li>4HANA: It focuses on designing scalable, high-performing data models.</li></ul>                                   |
| Topic 2 | <ul style="list-style-type: none"><li>SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW</li><li>4HANA: It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.</li></ul>               |
| Topic 3 | <ul style="list-style-type: none"><li>Data Acquisition into SAP BW</li><li>4HANA: This section tests how Data Engineers manage data integration into SAP BW</li><li>4HANA from multiple sources: It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.</li></ul> |

|         |   |
|---------|---|
| Topic 4 | <ul style="list-style-type: none"> <li>SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.</li> </ul> |
| Topic 5 | <ul style="list-style-type: none"> <li>SAP BW</li> <li>4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW</li> <li>4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.</li> </ul>                    |

## **Quiz 2026 SAP C-BW4H-2505: Valid Reliable SAP Certified Associate - Data Engineer - SAP BW/4HANA Test Preparation**

You many attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you wants and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due rule? You should choose the test C-BW4H-2505certification and buys our C-BW4H-2505 study materials to solve the problem. Passing the test C-BW4H-2505certification can help you increase your wage and be promoted easily and buying our C-BW4H-2505 study materials can help you pass the test smoothly.

### **SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q73-Q78):**

#### **NEW QUESTION # 73**

Where is the button that automatically generates a process chain?

- A. In the app called Process Chain Editor
- B. In the SAP GUI transaction for Process Chain Maintenance
- C. In the editor of a data flow object**
- D. In the editor of a data transfer process

**Answer: C**

#### **NEW QUESTION # 74**

You created an Open ODS view of type Facts.

With which object types can you associate a field in the Characteristics folder? Note: There are 2 correct answers to this question.

- A. Open ODS view of type Master Data**
- B. InfoObject of type Characteristic**
- C. Open ODS view of type Facts
- D. HDI Calculation View of data category Dimension

**Answer: A,B**

Explanation:

In SAP Data Engineer - Data Fabric, specifically within the context of Open ODS views, associating fields in the Characteristics folder is a critical task for data modeling. Let's break down the options and understand why A and B are the correct answers:

\* Explanation: Open ODS views of type "Master Data" are designed to hold descriptive attributes or characteristics that provide context to transactional data (facts). When you create an Open ODS view of type "Facts," you can associate fields in the Characteristics folder with master data objects. This association allows the fact data to be enriched with descriptive attributes from the master data.

\* In SAP BW/4HANA, Open ODS views of type Master Data are often used to model dimensions or attributes that describe the facts. For example, customer or product details can be modeled as master data and linked to fact data.

2. InfoObject of Type Characteristic (Option B)Explanation: An InfoObject of type "Characteristic" is a fundamental object in SAP BW/4HANA that represents a business attribute or property. These InfoObjects can be used to define characteristics in the

Characteristics folder of an Open ODS view of type Facts. By associating a field with an InfoObject, you ensure consistency and reusability of metadata across the system.

Reference: InfoObjects are part of the SAP BW metadata repository and are widely used in modeling scenarios. They provide a standardized way to define and manage characteristics such as customer, product, or region.

3. Open ODS View of Type Facts (Option C)Explanation: Open ODS views of type "Facts" are designed to store transactional data (measures) rather than descriptive attributes. Fields in the Characteristics folder cannot be associated with another Open ODS view of type Facts because this would create redundancy and violate the separation of concerns between facts and characteristics.

Reference: The architecture of Open ODS views enforces a clear distinction between fact data (quantitative measures) and characteristic data (descriptive attributes).

4. HDI Calculation View of Data Category Dimension (Option D)Explanation: While HDI (HANA Deployment Infrastructure) Calculation Views of data category "Dimension" are used in SAP HANA to model dimensional data, they are not directly compatible with Open ODS views in SAP BW/4HANA. Open ODS views operate within the BW/4HANA framework and rely on BW-specific objects like InfoObjects or other Open ODS views for associations.

Reference: HDI Calculation Views are part of the native SAP HANA modeling environment and are not natively integrated with BW/4HANA Open ODS views. Therefore, they cannot be directly associated with fields in the Characteristics folder of an Open ODS view.

ConclusionThe correct answers are A (Open ODS view of type Master Data) and B (InfoObject of type Characteristic) because these are the only object types that align with the purpose of the Characteristics folder in an Open ODS view of type Facts. They enable the enrichment of transactional data with descriptive attributes while maintaining the integrity and structure of the data model.

#### NEW QUESTION # 75

In a DataStore object (advanced) of type Data Mart, which request-based deletion is possible?

- A. Any not activated request in the inbound table
- B. Any request in the active data table
- C. Only the most recent not activated request in the inbound table
- D. Only the most recent request in the active data table

Answer: A,C

#### NEW QUESTION # 76

You create an SAP HANA HDI Calculation View. What are some of the reasons to choose the data category Cube with Star Join instead of data category Dimension? Note: There are 3 correct answers to this question.

- A. You can aggregate measures as a sum
- B. You can provide default time characteristics.
- C. You can combine master data transactional data.
- D. You can create restricted columns.
- E. You can persist transactional data.

Answer: A,C,E

#### NEW QUESTION # 77

What is the request handling default setting for error handling in a data transfer process (DTP) in SAP BW /4HANA?

- A. Request is set to failed, error stack is written, and valid records are updated.
- B. Request is canceled, records are not tracked, and target is not updated.
- C. Request is canceled, first incorrect record is tracked, and target is not updated.
- D. Request is set to success, error stack is written, and valid records are updated.

Answer: A

#### NEW QUESTION # 78
