High Hit Rate Test CTFL-AuT Answers - 100% Pass CTFL-AuT Exam

P.S. Free 2026 Fortinet FCSS_EFW_AD-7.6 dumps are available on Google Drive shared by ITExamDownload: https://drive.google.com/open?id=1KcjuvJf_WAobYFk4cSDdGll dd8vIQYA

We have prepared our Fortinet FCSS_EFW_AD-7.6 Training Materials for you. They are professional practice material under warranty. Accompanied with acceptable prices for your reference, all our materials with three versions are compiled by professional experts in this area more than ten years long.

The Fortinet sector is an ever-evolving and rapidly growing industry that is crucial in shaping our lives today. With the growing demand for skilled Fortinet professionals, obtaining FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) certification exam has become increasingly important for those who are looking to advance their careers and stay competitive in the job market.

Get 100% Pass-Rate Fortinet Valid FCSS_EFW_AD-7.6 Practice Materials and Pass-Sure New Dumps Ppt

Our FCSS_EFW_AD-7.6 test torrent keep a look out for new ways to help you approach challenges and succeed in passing the FCSS_EFW_AD-7.6 exam. And our FCSS_EFW_AD-7.6 qualification test are being concentrated on for a long time and have

accumulated mass resources and experience in designing study materials. There is plenty of skilled and motivated staff to help you obtain the FCSS_EFW_AD-7.6 Exam certificate that you are looking forward. We have faith in our professional team and our FCSS_EFW_AD-7.6 study tool, and we also wish you trust us wholeheartedly.

Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q31-Q36):

NEW QUESTION # 31

Refer to the exhibit.

A normalized interface LAN on FortiManager is shown.

Which two statements about this interface configuration are correct? (Choose two.)

- A. The normalized interface LAN will be mapped to the port2 interface for NGFW-1 [Core2].
- B. The normalized interface LAN will be mapped to the wireless interface for FortiGate-81E model devices.
- C. The normalized interface LAN will be mapped to the private interface for FortiGate-VM64 model devices.
- D. The normalized interface LAN will be mapped to the Human Resources interface for any FortiGate-40F model devices.

Answer: A,B

Explanation:

The normalized interface named LAN is mapped per platform so that, for any FortiGate-81E device, it corresponds to the interface named Wireless. In addition, a specific per-device mapping is defined so that, on device NGFW-1 [Core2], the normalized LAN interface maps to the physical interface port2.

NEW QUESTION # 32

Which two options should you consider to scale performance using an additional FortiGate?

- A. FGCP Active-Passive
- B. FGCP Active-Active
- C. VRRP
- D. FGSP

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract documents and Knowledge:

To scale performance beyond a single unit, Fortinet provides two primary clustering and synchronization methods:

* FGCP Active-Active: This mode distributes network traffic among all members of the cluster, allowing the combined processing power of multiple units to handle higher throughput and security inspection loads.

* FGSP (FortiGate Session Life Support Protocol): This protocol is used to synchronize session information between independent FortiGate units or clusters. It is commonly used in large-scale environments where external load balancers distribute traffic across multiple FortiGates, ensuring that if traffic for a session is asymmetric (sent to one unit but returned to another), the return unit has the necessary session state to allow the traffic. In contrast, FGCP Active-Passive provides redundancy but does not scale performance as the secondary unit remains idle.

NEW QUESTION # 33

Refer to the exhibit.

An administrator is deploying a hub and spokes network and using OSPF as dynamic protocol.

Which configuration is mandatory for neighbor adjacency?

- A. Set virtual-link enable in the hub interface
- B. Set network-type point-to-multipoint in the hub interface
- C. Set bfd enable in the router configuration
- D. Set rfc1583-compatible enable in the router configuration

Answer: B

Explanation:

In a hub-and-spoke topology using OSPF over IPsec VPNs, the point-to-multipoint network type is necessary to establish neighbor adjacencies between the hub and spokes. This network type ensures that OSPF operates correctly without requiring a designated router (DR) and allows dynamic routing updates across the IPsec tunnels.

NEW QUESTION # 34

How should you adjust MTU values to resolve encapsulation issues?

- A. FortiGate only
- B. Wired only
- C. **Controlled environment**
- D. All interfaces

Answer: C

Explanation:

Encapsulation (such as IPsec, VXLAN, or FGSP synchronization) adds overhead to standard packets, often causing them to exceed the standard MTU of 1500 bytes and leading to fragmentation or dropped packets.

The Enterprise Firewall curriculum notes that while "jumbo packets" can be detected as possible attacks by IPS, adjusting MTU and MSS values to account for encapsulation should ideally be performed in a controlled environment. This allows administrators to accurately measure the required overhead and verify that the adjustments do not cause unintended network instability or performance degradation across the entire infrastructure.

NEW QUESTION # 35

Refer to the exhibit, which shows a LAN interface connected from FortiGate to two FortiSwitch devices.

□ What two conclusions can you draw from the corresponding LAN interface? (Choose two.)

- A. You must enable STP or RSTP on FortiGate and FortiSwitch to avoid layer 2 loopbacks.
- B. FortiGate is using an SD-WAN-type interface to connect to a FortiSwitch device with MCLAG.
- C. **The LAN interface must use a 802.3ad type interface.**
- D. **This connection is using a FortiLink to manage VLANs on FortiGate.**

Answer: C,D

Explanation:

The diagram shows a FortiGate connected to two FortiSwitches, which suggests the use of FortiLink, Fortinet's protocol for managing switches directly from a FortiGate. Since multiple connections are being used, the LAN interface must be set to 802.3ad (LAG) mode to aggregate the links for redundancy and load balancing.

This setup allows FortiGate to handle VLAN assignments dynamically, as seen with VLAN 10 (192.168.15.1/24). FortiLink ensures seamless integration between FortiGate and FortiSwitches, making STP unnecessary because Fortinet's MCLAG prevents loops at Layer 2. SD-WAN, on the other hand, is used for WAN interfaces and does not apply to switch connectivity in this scenario.

NEW QUESTION # 36

.....

Passing the FCSS_EFW_AD-7.6 exam in the shortest time is the voice of all the examinees. But how to select the most valuable information in overwhelming learning materials is a headache thing for all examiners. After our unremitting efforts, our FCSS_EFW_AD-7.6 learning guide comes in everybody's expectation. Our professional experts not only have simplified the content and grasp the key points for our customers, but also recompiled the FCSS_EFW_AD-7.6 Preparation materials into simple language, you will get a leisure study experience as well as a doomed success on your coming FCSS_EFW_AD-7.6 exam.

FCSS_EFW_AD-7.6 New Dumps Ppt: https://www.itexamdownload.com/FCSS_EFW_AD-7.6-valid-questions.html

Massive demand of our FCSS_EFW_AD-7.6 quiz guide materials Our FCSS_EFW_AD-7.6 sure-pass learning materials: FCSS - Enterprise Firewall 7.6 Administrator have received massive demands in the market for their great quality and accuracy as one of the most popular practice materials all these years, Fortinet Valid FCSS_EFW_AD-7.6 Practice Materials Do you want to obtain the certification, We are dedicated to your accomplishment, hence pledges you victory in FCSS_EFW_AD-7.6 exam in a single attempt.
