Salesforce Health Cloud Accredited Professional Sample Questions (Q109-Q114):

NEW QUESTION # 109

Bloomington Caregivers needs to migrate Health Condition records from its previous org with International Classification of Diseases (ICD) information.

Which two objects should an administrator load with data prior to migrating this information, to ensure a successful data load?

Choose 2 answers

- A. Clinical Encounter
- B. code set
- C. Healthcare Diagnosis
- D. Account

Answer: B,D

NEW QUESTION # 110

Bloomington Caregivers is looking to migrate from Service Cloud to Health Cloud to take advantage of the prebuilt healthcare features and functionality.

Which three prerequisites should Bloomington Caregivers' administrators complete to successfully install the Health Cloud managed package in its org?

Choose 3 answers

- A. Enable person accounts from Setup.
- B. Enable Chatter settings from Setup.
- C. Make data protection details available in records.
- D. Log a support case to have person accounts enabled.
- E. Enable contacts to relate to multiple accounts.

Answer: B,C,E

NEW QUESTION # 111

Bloomington Caregivers is implementing Home Health scheduling with Health Cloud. It must ensure that those who need to schedule the visits have the right permission set license.

Which permission set license should a consultant assign in this scenario?

- A. Execute Health Scheduling
- B. Healthcare Visit Manager
- C. Field Dispatch Scheduler
- **D. Manage Home Health**

Answer: D

NEW QUESTION # 112

A provider wants its care coordinators to track a series of problems, goals, and interventions (PGIs) related to a patient's care in a repeatable, efficient way.

Which approach should a consultant recommend?

- A. Define a PGI Library and care plan templates using the library.
- **B. Configure an action plan template with tasks for each PGI.**
- C. Coach the care coordinators to quickly create tasks using a checklist.
- D. Create care program templates and assign them to patients.

Answer: B

NEW QUESTION # 113

Bloomington Caregivers want to offer its patients remote monitoring to bring data from patient devices into Health Cloud.

Which set of records should an administrator populate to implement this functionality?

- A. Code Sets, Units of Measure, Care Metric Targets, Care Observations
- B. Code Sets, Biometrics, Care Observations, Chart Metrics
- **C. Units of Measure, Remote Monitoring Device Types, Care Observations, Code Sets**
- D. Units of Measure, Code Sets, Remote Monitoring Device Types, Care Episodes

Answer: C

Explanation:

In Salesforce Health Cloud, the Remote Monitoring capability enables healthcare providers to capture and analyze patient-generated health data (from devices such as glucose monitors, blood pressure cuffs, or fitness trackers).

To implement this functionality, the following records must be populated:

Units of Measure - Defines the measurement units (e.g., mmHg, bpm, mg/dL) for device readings.

Remote Monitoring Device Types - Represents the categories of patient devices (e.g., heart rate monitor, glucose meter).

Care Observations - Stores the actual readings (vital signs, measurements) coming from the devices.

Code Sets - Provides standardized medical coding (e.g., LOINC, SNOMED, ICD) for interoperability and classification of device data.

Together, these records form the Remote Monitoring data model.

Why not the others?

B. Units of Measure, Code Sets, Remote Monitoring Device Types, Care Episodes Care Episodes are for tracking episodes of care, not device data.

C. Code Sets, Units of Measure, Care Metric Targets, Care Observations Care Metric Targets are for goal setting, not required for capturing device data.

D. Code Sets, Biometrics, Care Observations, Chart Metrics

"Biometrics" and "Chart Metrics" are not the correct Health Cloud objects for Remote Monitoring; instead, Remote Monitoring Device Types + Care Observations are used.

Salesforce Health Cloud Reference:

Salesforce Health Cloud - Remote Patient Monitoring:

"Use Remote Monitoring Device Types, Units of Measure, Code Sets, and Care Observations to capture and store data from connected health devices."
