Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q256-Q261):

NEW QUESTION # 256

Which of the following is an example of a network layer (Layer 3) security control?

- **A. Firewall**
- B. Antivirus software
- C. Encryption
- D. Intrusion Detection System (IDS)

Answer: A

Explanation:

A firewall operates at the network layer (Layer 3) of the OSI model and is designed to control incoming and outgoing network traffic based on a set of predetermined security rules. It acts as a barrier between an internal network and external networks, filtering and inspecting packets to prevent unauthorized access and protect against various types of network attacks.

NEW QUESTION # 257

In the context of cybersecurity investigations, what does the term "evidence" typically refer to?

- A. Proof of an individual's intent to commit a crime.
- **B. Facts or data gathered during an incident response.**
- C. Documentation of security control implementation.
- D. Information that supports a hypothesis or conclusion.

Answer: B

Explanation:

In cybersecurity investigations, evidence refers to the facts, data, or information that is collected and analyzed to understand the details of an incident or security breach. This evidence is crucial for identifying the cause, scope, and impact of an incident, as well as for further legal or disciplinary actions if required.

NEW QUESTION # 258

What is one benefit of regularly updating documentation in the context of cybersecurity?

- A. Increasing the risk of unauthorized access to the documentation
- **B. Increasing the likelihood of compliance with industry regulations**
- C. Decreasing accountability and traceability of incidents
- D. Creating confusion among users accessing the documentation

Answer: B

Explanation:

Regularly updating documentation helps organizations stay current with industry regulations and best practices. By aligning documentation with compliance requirements, organizations can ensure they are meeting the necessary standards and reduce the risk of potential penalties or legal issues.

NEW QUESTION # 259

Which of the following strategies is recommended for managing communication proactively after an event?

- A. Implementing multi-factor authentication
- B. Keeping antivirus software up to date
- C. Regularly backing up data
- **D. Conducting a forensic analysis**

Answer: D

Explanation:

Conducting a forensic analysis is a recommended strategy for managing communication proactively after an event. When a security incident occurs, it is essential to investigate the nature of the incident, determine its impact, and identify the root cause. Conducting a forensic analysis helps uncover valuable information such as the method of attack, affected systems, and potential weaknesses that can be addressed to prevent similar incidents in the future. This proactive approach facilitates the development of a more robust security posture.

NEW QUESTION # 260

Which of the following is an example of a mitigation strategy in cybersecurity?

- A. Allowing employees to use personal devices for work purposes
- B. Disabling firewalls and antivirus software
- C. Sharing sensitive data with unauthorized individuals
- **D. Regularly updating software and operating systems**

Answer: D

Explanation:

Regularly updating software and operating systems is a mitigation strategy in cybersecurity. By keeping software and operating systems up to date, organizations can effectively address vulnerabilities and reduce the risk of potential cyber attacks. This practice helps to close known security gaps and prevent attackers from exploiting them.
