TestPassKing's Exam Questions Help You Get ISACA CISM Certification with Ease

Since the CISM study quiz is designed by our professionals who had been studying the exam all the time according to the changes of questions and answers. Our CISM simulating exam is definitely making your review more durable. To add up your interests and simplify some difficult points, our experts try their best to simplify our CISM Study Material and help you understand the learning guide better.

ISACA CISM (Certified Information Security Manager) certification exam is a highly sought-after credential in the field of information security. Certified Information Security Manager certification is designed for professionals who are responsible for managing, designing, and overseeing the security of their organization's information systems. The CISM Certification Exam measures the candidate's knowledge and skills in four key areas of information security management: information security governance, risk management, information security program development and management, and information security incident management.

ISACA Certified Information Security Manager Sample Questions (Q832-Q837):

NEW QUESTION # 832

When developing a categorization method for security incidents, the categories MUST:

- A. have agreed-upon definitions.

- B. be created by the incident handler.
- C. align with reporting requirements.
- D. align with industry standards.

Answer: A

Explanation:

Explanation

When developing a categorization method for security incidents, the categories must have agreed-upon definitions. This means that the categories should be clear, consistent, and understandable for all the parties involved in the incident response process, such as the incident handlers, the stakeholders, the management, and the external authorities. Having agreed-upon definitions for the categories can help to ensure that the incidents are classified and reported accurately, that the appropriate actions and resources are allocated, and that the communication and coordination are effective. Aligning with industry standards, creating by the incident handler, and aligning with reporting requirements are not mandatory for developing a categorization method for security incidents, although they may be desirable or beneficial depending on the context and objectives of the organization. Aligning with industry standards can help to adopt best practices and benchmarks for incident response, but it may not be feasible or suitable for all types of incidents or organizations. Creating by the incident handler can allow for flexibility and customization of the categories, but it may also introduce inconsistency and ambiguity if the definitions are not shared or agreed upon by others. Aligning with reporting requirements can help to comply with legal or contractual obligations, but it may not cover all the aspects or dimensions of the incidents that need to be categorized. References = CISM Review Manual, 16th Edition, pages 200-2011; CISM Review Questions, Answers & Explanations Manual, 10th Edition, page 822 When developing a categorization method for security incidents, the categories MUST have agreed-upon definitions. This is because having clear and consistent definitions for each category of incidents will help to ensure a common understanding and communication among the incident response team and other stakeholders. It will also facilitate the accurate and timely identification, classification, reporting and analysis of incidents. Having agreed-upon definitions will also help to avoid confusion, ambiguity and inconsistency in the incident management process

NEW QUESTION # 833

Simple Network Management Protocol v2 (SNMP v2) is used frequently to monitor networks. Which of the following vulnerabilities does it always introduce?

- A. Remote buffer overflow
- **B. Clear text authentication**
- C. Man-in-the-middle attack
- D. Cross site scripting

Answer: B

Explanation:

Explanation/Reference:

Explanation:

One of the main problems with using SNMP v1 and v2 is the clear text "community string" that it uses to authenticate. It is easy to sniff and reuse. Most times, the SNMP community string is shared throughout the organization's servers and routers, making this authentication problem a serious threat to security.

There have been some isolated cases of remote buffer overflows against SNMP daemons, but generally that is not a problem. Cross site scripting is a web application vulnerability that is not related to SNMP. A man-in-the-middle attack against a user datagram protocol (UDP) makes no sense since there is no active session; every request has the community string and is answered independently.

NEW QUESTION # 834

When investigating an information security incident, details of the incident should be shared:

- A. widely to demonstrate positive intent.
- B. only with management.
- C. only with internal audit.
- **D. only as needed,**

Answer: D

NEW QUESTION # 835

Which of the following is the MOST important item to consider when evaluating products to monitor security across the enterprise?

- A. System overhead
- B. Product documentation
- C. Available support
- D. Ease of installation

Answer: A

Explanation:

Explanation/Reference:

Explanation:

Monitoring products can impose a significant impact ON system overhead for servers and networks.

Product documentation, telephone support and ease of installation, while all important, would be secondary.

NEW QUESTION # 836

An organization involved in e-commerce activities operating from its home country opened a new office in another country with stringent security laws. In this scenario, the overall security strategy should be based on:

- A. the security organization structure.
- B. risk assessment results.
- C. the most stringent requirements.
- D. international security standards.

Answer: B

NEW QUESTION # 837

.....

In today's technological world, more and more students are taking the CISM exam online. While this can be a convenient way to take an ISACA CISM exam dumps, it can also be stressful. Luckily, TestPassKing's best ISACA CISM exam questions can help you prepare for your ISACA CISM Certification Exam and reduce your stress.
