ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q57-Q62):

NEW QUESTION # 57

A web-based system is being developed to support the administration of tennis tournaments.
The system provides advice on how much money to offer each player as their individual attendance fee. The amount depends on a combination of the following factors:
* Overall attendance fund (divided into five numeric ranges)
* Player's current world ranking (divided into ten numeric ranges)
* Whether it is a local tournament for the player (YES or NO)
* Their relationship with the tournament sponsors (clothing, equipment, or endorsement)
* Their previous attendance history at this event (finalist, played, withdrew before event, or withdrew during event) The new system needs to be ready for the next tournament in just a few months' time, so testing schedules will be severely challenged.
Which specification-based technique would be the BEST choice in the circumstances?
SELECT ONE OPTION:

- A. Pairwise testing
- B. Equivalence partitioning
- C. Use case testing
- D. State Transition testing

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation:
* A (Use case testing):Not suitable as it focuses on user interactions rather than combinations of input values.
* B (State Transition testing):Irrelevant since the focus is not on state changes.
* C (Equivalence partitioning):Good for partitioning input values but not efficient for combinations.
* D (Pairwise testing):Correct. This technique is highly efficient for covering combinations of multiple variables with fewer test cases, which is crucial when the schedule is tight.
Therefore, the correct answer is D (Pairwise testing).

NEW QUESTION # 58

You work for a company that is a pioneer in smart energy technology. The company is planning to launch a new application for smartphones and tablets that will allow customers to view their energy readings remotely. The application must support customers with disabilities.
The application is being delivered using a hybrid mix of agile and V-model methodologies over three iterations:
* Iteration 1:Development of the application for the iOS operating system
* Iteration 2:Enhancement to support the Android operating system
* Iteration 3:Enhancement to provide daily budget usage
You have been asked to review the risk register and design test conditions for the highest priority product risks that fall into your area of responsibility, relating to Iterations 1 and 2 only.

Risk ID	Description	Impact	Likelihood
R01	The application may prove difficult to use for those who are visually impaired	Medium	Low
R02	The daily energy budget usage may not be accurately calculated from seasonal historic data	High	High
R03	The application may be incorrectly installed on some iOS and Android devices and operating systems	High	Medium
R04	Insufficient time to test the application on all supported iOS and Android devices and OS	Medium	Medium

SELECT ONE OPTION

- A. R02
- B. R03
- C. R04
- D. R01

Answer: B

Explanation:
Comprehensive and Detailed in Depth Explanation:
Since the question focuses onIterations 1 and 2 only, we must prioritize risks related to these iterations.
* R01(Accessibility): Low likelihood, medium impact - not a priority for initial iterations.
* R02(Budget calculation): Related to Iteration 3, so it isnot relevantto the current test design.
* R03(Installation issues on iOS and Android): High impact, medium likelihood -relevantfor both Iterations 1 and 2. Installation is crucial for ensuring the application works on both platforms.
* R04(Insufficient testing time): Medium impact and likelihood - important, but R03 is more critical.
Hence, the highest priority risk to address first isR03 (The application may be incorrectly installed on some iOS and Android devices).

NEW QUESTION # 59
To enhance both the effectiveness and efficiency of the test design phase, the purchase of a test design tool is being considered. Which one of these statements best characterizes a test design tool?

- A. A test design tool enables tests to be executed automatic ally.
- B. A test design tool enables individual tests to be traced to requirements
- C. A test design tool validates models of the software.
- D. A test design tool generates test inputs from requirements

Answer: D

Explanation:
The statement that best characterizes a test design tool is that a test design tool generates test inputs from requirements. A test design tool is a tool that supports the test design activity by generating test inputs or test cases from a specified source, such as requirements, models, or code. A test design tool can use various techniques, such as equivalence partitioning, boundary value analysis, decision tables, state transition diagrams, etc., to generate test inputs or test cases. NEW QUESTION # 60
Consider the following requirement:
The system shall allow cash advances of at least 200 Euros for all supported credit cards The following credit cards are supported-American Express, Diners, VISA, Mastercard and Eurocard.
The requirement has been identified as business critical.
The following test conditions have been derived:
1. The system shall allow cash advances of at least 200 Euros
2. It shall support American Express, Diners, VISA, Mastercard and Eurocard.

Assume you are following a risk-based testing strategy, where likelihood and impact are both assessed on a five-point scale ranging from very low to very high The requirement R1 was identified as a risk item during the quality risk analysis process. In total 20 risk items were identified during this process Assume that technical project stakeholders have assessed the likelihood of the requirement R1 risk item at a medium level Given only the information above, which of the following statements is true?

- A. The test cases associated with requirement R1 shall be run first in the test execution period
- B. The risk impact for requirement R1 should be categorized as high or very high
- C. A large number of test cases should be designed for requirement R1, based on impact
- D. The test cases associated with requirement R1 must be run towards the middle of the test execution period.

Answer: B

NEW QUESTION # 61

Ken finds the quality of the tea locally available to be so low, that he decides to research superior teas around the world. He decides to market, sell and distribute these superior teas via the web. His marketing strategy is to offer superior products on a well-designed website that has fast loading graphics, high availability, superior usability and fast response times. The website will offer the following:
- An innovative interactive catalogue of teas, which not only enables customers to buy the product, but also enables them to provide feedback by rating the teas (which will influence his stock purchasing levels).
- Provide the customer with the ability to use secure credit card transactions.
- Provide the customer with the ability to give general feedback.
Ken selects an iterative model for the development of the prototypes. The team consists of three developers who are experienced in web development Ken, although he doesn't have a technical skillset, is concerned with quality. He doesn't believe a lot of documentation is necessary and he wants the website to be completed quickly. The test basis contains the following:
- Story boards that show the information flow and page links through the site.
- HTML pages developed to date
- A set of non-functional requirements.
With the strategy taking shape, it is decided that exploratory testing should be used to complete the required testing, bearing in mind the nature of the application and the nature of Ken's overall objectives. You have now been given the task of identifying the exploratory tests, which will be executed as test sessions.
Which of the options below state what you will typically use for identifying the exploratory tests?

- A. Use external testers on the team to provide a new approach and fresh view to the testing effort
- B. Define low-level test cases to be executed by the end users.
- C. Apply equivalence partitioning and boundary value analysis using the storyboard ideas as a basis to maximise functional coverage
- D. Create test chatters to be used to guide the testing

Answer: D

Explanation:
The best way to identify the exploratory tests is to create test charters to be used to guide the testing. A test charter is a document that defines the scope, objectives, and approach of an exploratory testing session. A test charter helps to focus the testing on the most important aspects of the system under test and provides a structure for reporting and learning from the testing results.
