高效的Salesforce Identity-and-Access-Management-Architect題庫更新是行業領先材料& 驗證有效的Identity-and-Access-Management-Architect真題

不要再猶豫了，如果想體驗一下Identity-and-Access-Management-Architect考古題的內容，那麼快點擊Testpdf的網站獲取吧。你可以免費下載考古題的一部分。在購買Identity-and-Access-Management-Architect考古題之前，你可以去Testpdf的網站瞭解更多的資訊，更好地瞭解這個網站。另外，關於考試失敗全額退款的政策，你也可以事先瞭解一下。Testpdf绝对是一个全面保障你的利益，设身处地为你考虑的网站。

最新的 Identity and Access Management Designer Identity-and-Access-Management-Architect 免費考試真題 (Q73-Q78):

問題 #73

Universal Container's (UC) is using Salesforce Experience Cloud site for its container wholesale business.

The identity architect wants to use an authentication provider for the new site.

Which two options should be utilized in creating an authentication provider?

Choose 2 answers

- A. A custom error URL can be set.
- B. A custom registration handler can be set.
- C. The default authentication provider certificate can be set.
- D. The default login user can be set.

答案：A,B

解題說明：

When creating an authentication provider in Salesforce, architects can configure operational settings that shape the user experience

and downstream provisioning behavior. A custom error URL is supported so failed sign-ins can be routed to a branded or informative destination. A custom registration handler is also supported, giving the org control over how incoming identities are mapped to Salesforce users and related records. By contrast, options like a "default login user" or a generic default certificate setting do not describe the primary provider-creation controls in the same way. The important architecture concept is that an authentication provider defines both the trust with the external source and the user-lifecycle handling logic inside Salesforce. This is why options B, D work together as the correct solution.

問題 #74

A multinational industrial products manufacturer is planning to implement Salesforce CRM to manage their business. They have the following requirements:

1. They plan to implement Partner communities to provide access to their partner network .
2. They have operations in multiple countries and are planning to implement multiple Salesforce orgs.
3. Some of their partners do business in multiple countries and will need information from multiple Salesforce communities.
4. They would like to provide a single login for their partners.

How should an Identity Architect solution this requirement with limited custom development?

- A. Consolidate Partner related information in a single org and provide access through Salesforce community.
- B. Register partners in one org and access information from other orgs using APIs.
- C. Allow partners to choose the Salesforce org they need information from and use login flows to authenticate access.
- **D. Create a partner login for the country of their operation and use SAML federation to provide access to other orgs.**

答案: D

問題 #75

Universal Containers (UC) is rolling out its new Customer Identity and Access Management Solution built on top of its existing Salesforce instance. UC wants to allow customers to login using Facebook, Google, and other social sign-on providers.

How should this functionality be enabled for UC, assuming all social sign-on providers support OpenID Connect?

- A. Configure a single sign-on setting and a registration handler for each social sign-on provider.
- B. Configure a single sign-on setting and a JIT handler for each social sign-on provider.
- C. Configure an authentication provider and a Just-In-Time (JIT) handler for each social sign-on provider.
- **D. Configure an authentication provider and a registration handler for each social sign-on provider.**

答案: D

解題說明:

To allow customers to login using Facebook, Google, and other social sign-on providers, the identity architect should configure an authentication provider and a registration handler for each social sign-on provider.

Authentication providers are configurations that enable users to authenticate with an external identity provider and access Salesforce resources. OpenID Connect is a protocol that allows users to sign in with an external identity provider, such as Facebook or Google, and access Salesforce resources. To enable this, the identity architect needs to configure an OpenID Connect Authentication Provider in Salesforce and link it to a connected app. A registration handler is a class that implements the Auth.RegistrationHandler interface and defines how to create or update users in Salesforce based on the information from the external identity provider. The registration handler can also be used to link the user's social identity with their Salesforce identity and prevent duplicate accounts. 問題 #76

Universal Containers (UC) uses middleware to integrate multiple systems with Salesforce. UC has a strict, new requirement that usernames and passwords cannot be stored in any UC system. How can UC's middleware authenticate to Salesforce while adhering to this requirement?

- A. Create a Connected App that supports the User-Agent OAuth Flow.
- **B. Create a Connected App that supports the JWT Bearer Token OAuth Flow.**
- C. Create a Connected App that supports the Web Server OAuth Flow.
- D. Create a Connected App that supports the Refresh Token OAuth Flow.

答案： B

解題說明：

A is correct because creating a connected app that supports the JWT Bearer Token OAuth Flow allows the middleware to authenticate to Salesforce without storing usernames and passwords. The JWT Bearer Token OAuth Flow uses a certificate and a private key to sign a JSON Web Token (JWT) that contains information about the user identity and requested access. The middleware sends the JWT to Salesforce, which verifies it using the certificate and grants an access token².

B is incorrect because creating a connected app that supports the Refresh Token OAuth Flow requires storing usernames and passwords in the middleware. The Refresh Token OAuth Flow uses a username-password authentication flow to obtain an access token and a refresh token. The middleware can use the refresh token to obtain new access tokens without user interaction, but it still needs to store the username and password for the initial authentication³.

C is incorrect because creating a connected app that supports the Web Server OAuth Flow requires user interaction to authenticate to Salesforce. The Web Server OAuth Flow redirects the user to a Salesforce login page, where they enter their credentials and grant access to the middleware. The middleware then receives an authorization code that it can exchange for an access token and a refresh token⁴.

D is incorrect because creating a connected app that supports the User-Agent OAuth Flow also requires user interaction to authenticate to Salesforce. The User-Agent OAuth Flow is similar to the Web Server OAuth Flow, except that it does not return a refresh token. The middleware can only use the access token until it expires⁵.

問題 #77

The executive sponsor for an organization has asked if Salesforce supports the ability to embed a login widget into its service providers in order to create a more seamless user experience.

What should be used and considered before recommending it as a solution on the Salesforce Platform?

- A. Embedded Login. Identify what level of UI customization will be required to make it match the service providers look and feel.
- B. Salesforce REST APIs. Ensure that Secure Sockets Layer (SSL) connection for the integration is used.
- C. OpenID Connect Web Server Flow. Determine if the service provider is secure enough to store the client secret on.
- **D. Embedded Login. Consider whether or not it relies on third party cookies which can cause browser compatibility issues.**

答案： D

解題說明：

Explanation

Embedded Login is a feature that allows Salesforce to embed a login widget into any web page, such as a service provider's site, to enable users to log in with their Salesforce credentials. However, Embedded Login relies on third-party cookies, which can cause browser compatibility issues and require users to adjust their browser settings. Therefore, this should be considered before recommending it as a solution on the Salesforce Platform. References: Embedded Login, Embedded Login Implementation Guide

問題 #78

.....

Salesforce的Identity-and-Access-Management-Architect考試的考生都知道，Salesforce的Identity-and-Access-Management-Architect考試是比較不容易通過的，但是它又是通往成功的必經之路，所以不得不選擇，為了提高你的職業價值，你有權通過測試認證，我們Testpdf設計的考試試題及答案包含不同的針對性，覆蓋面廣，沒有任何其他書籍或者別的資料方式可以超越它，Testpdf絕對是幫助你通過測試的王牌考試試題及答案。經過眾人的使用結果證明，Testpdf通過率高達100%，Testpdf是唯一適合你通過考試的方式，選擇了它，等於創建了一個美好的未來。

Identity-and-Access-Management-Architect真題： <https://www.testpdf.net/Identity-and-Access-Management-Architect.html>

Testpdf Identity-and-Access-Management-Architect真題的考古題就是一個最好的方法，這才是Identity-and-Access-Management-Architect問題集練習的正確方式之一，有了Salesforce Identity-and-Access-Management-Architect真題Identity-and-Access-Management-Architect真題認證考試的證書就相當於人生有了個新的里程碑，工作將會有很大的提升，相信作為IT行業人士的每人都很想擁有吧，Salesforce Identity-and-Access-Management-Architect題庫更新另外，關於考試失敗全額退款的政策，你也可以事先瞭解一下，1，可以提前了解實際的Identity-and-Access-Management-Architect問題和答案，讓我們能夠做好充足的考試準備；2，可以緩解我們學習時間不充足的問題；3，可
