## Vce SPLK-4001 Files & SPLK-4001 Interactive Course

Are you aiming to ace the Splunk SPLK-4001 exam on your first attempt? Look no further! Pass4Success provides updated Splunk O11y Cloud Certified Metrics User (SPLK-4001) exam questions that will help you succeed. In today's competitive job market, obtaining the Splunk SPLK-4001 Certification is essential for securing high-paying jobs and promotions. Don't waste your time and money studying outdated SPLK-4001 practice test material. Prepare with actual SPLK-4001 questions to save time and achieve success.

## Splunk O11y Cloud Certified Metrics User Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Where does the Splunk distribution of the OpenTelemetry Collector store the configuration files on Linux machines by default?

- A. /opt/splunk/
- B. /etc/otel/collector/
- C. /etc/system/default/
- D. /etc/opentelemetry/

**Answer: B**

Explanation:

The correct answer is B. /etc/otel/collector/

According to the web search results, the Splunk distribution of the OpenTelemetry Collector stores the configuration files on Linux machines in the /etc/otel/collector/ directory by default. You can verify this by looking at the first result<sup>1</sup>, which explains how to install the Collector for Linux manually. It also provides the locations of the default configuration file, the agent configuration file, and the gateway configuration file.

To learn more about how to install and configure the Splunk distribution of the OpenTelemetry Collector, you can refer to this documentation<sup>2</sup>.

1: <https://docs.splunk.com/Observability/gdi/opentelemetry/install-linux-manual.html> 2:

<https://docs.splunk.com/Observability/gdi/opentelemetry.html>

### NEW QUESTION # 19

Which of the following are supported rollup functions in Splunk Observability Cloud?

- A. std\_dev, mean, median, mode, min, max
- B. sigma, epsilon, pi, omega, beta, tau
- C. 1min, 5min, 10min, 15min, 30min
- D. average, latest, lag, min, max, sum, rate

**Answer: D**

Explanation:

Explanation

According to the Splunk O11y Cloud Certified Metrics User Track document<sup>1</sup>, Observability Cloud has the following rollup functions: Sum (default for counter metrics): Returns the sum of all data points in the MTS reporting interval. Average (default for gauge metrics): Returns the average value of all data points in the MTS reporting interval. Min: Returns the minimum data point value seen in the MTS reporting interval. Max:

Returns the maximum data point value seen in the MTS reporting interval. Latest: Returns the most recent data point value seen in the MTS reporting interval. Lag: Returns the difference between the most recent and the previous data point values seen in the MTS reporting interval. Rate: Returns the rate of change of data points in the MTS reporting interval. Therefore, option A is correct.

### NEW QUESTION # 20

What constitutes a single metrics time series (MTS)?

- A. A set of metrics that are ordered in series based on timestamp.
- B. A set of data points that all have the same metric name and list of dimensions.
- C. A set of data points that use different dimensions but the same metric name.
- D. A series of timestamps that all reflect the same metric.

**Answer: B**

Explanation:

The correct answer is B. A set of data points that all have the same metric name and list of dimensions.

A metric time series (MTS) is a collection of data points that have the same metric and the same set of dimensions. For example, the following sets of data points are in three separate MTS:

MTS1: Gauge metric cpu.utilization, dimension "hostname": "host1" MTS2: Gauge metric cpu.utilization, dimension "hostname":

"host2" MTS3: Gauge metric memory.usage, dimension "hostname": "host1" A metric is a numerical measurement that varies over

time, such as CPU utilization or memory usage. A dimension is a key-value pair that provides additional information about the metric, such as the hostname or the location. A data point is a combination of a metric, a dimension, a value, and a timestamp

### NEW QUESTION # 21

A customer wants to share a collection of charts with their entire SRE organization. What feature of Splunk Observability Cloud makes this possible?

- A. Chart exporter
- B. Shared charts
- C. Dashboard groups
- D. Public dashboards

**Answer: C**

Explanation:

Explanation

According to the web search results, dashboard groups are a feature of Splunk Observability Cloud that allows you to organize and share dashboards with other users in your organization<sup>1</sup>. You can create dashboard groups based on different criteria, such as service, team, role, or topic. You can also set permissions for each dashboard group, such as who can view, edit, or manage the dashboards in the group. Dashboard groups make it possible to share a collection of charts with your entire SRE organization, or any other group of users that you want to collaborate with.

### NEW QUESTION # 22

A customer operates a caching web proxy. They want to calculate the cache hit rate for their service. What is the best way to achieve this?

- A. Timeshift and Bottom N
- B. Timeshift and Top N
- C. Percentages and ratios
- D. Chart Options and metadata

**Answer: C**

Explanation:

According to the Splunk O11y Cloud Certified Metrics User Track document<sup>1</sup>, percentages and ratios are useful for calculating the proportion of one metric to another, such as cache hits to cache misses, or successful requests to failed requests. You can use the `percentage()` or `ratio()` functions in SignalFlow to compute these values and display them in charts. For example, to calculate the cache hit rate for a service, you can use the following SignalFlow code:

```
percentage(counters("cache.hits"), counters("cache.misses"))
```

This will return the percentage of cache hits out of the total number of cache attempts. You can also use the `ratio()` function to get the same result, but as a decimal value instead of a percentage.

```
ratio(counters("cache.hits"), counters("cache.misses"))
```

### NEW QUESTION # 23
