NEW QUESTION # 86

Drag and Drop Question

You have an Azure environment that contains multiple workloads deployed across multiple subscriptions.

You need to recommend a solution to assess and improve the security posture of the workloads.

The solution must meet the following requirements:

- Use the Microsoft Cloud Adoption Framework for Azure to evaluate compliance with cloud governance policies.
- Use the Azure Well-Architected Framework to secure individual workloads.

What should you include in the recommendation for each requirement? To answer, drag the appropriate recommendations to the correct requirements. Each recommendation may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Microsoft Defender for Cloud

Microsoft Cloud Adoption Framework for Azure To evaluate compliance with cloud governance policies in Azure when using the Microsoft Cloud Adoption Framework (CAF), you should use Azure Policy and Microsoft Defender for Cloud. Azure Policy enforces your defined rules on resources and provides a compliance dashboard, while Defender for Cloud offers a unified view of security and security recommendations to help meet compliance standards.

Enhance with Microsoft Defender for Cloud:

Use Defender for Cloud to gain a unified view of security posture across your workloads.

It provides actionable recommendations to fix security issues, helping to improve your compliance with security standards and regulations.

Box 2: Microsoft Defender Vulnerability

Microsoft Defender Vulnerability Management (a component of Microsoft Defender for Cloud) is used to secure workloads on Azure by identifying, prioritizing, and helping to remediate vulnerabilities, directly aligning with the Security pillar of the Azure Well-Architected Framework.

The framework provides a holistic guidance structure, and Defender Vulnerability Management provides a practical tool for implementing security best practices to protect individual workloads and critical assets.
