## 300-425 Reliable Dumps Book - 300-425 Test Practice

We have a team of experts curating the real 300-425 questions and answers for the end users. We are always working on updating the latest 300-425 questions and providing the correct 300-425 answers to all of our users. We provide free updates for one year from the date of purchase. You can benefit from the updates 300-425 Preparation material, and you will be able to pass the 300-425 exam in the first attempt.

## Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q253-Q258):

NEW QUESTION # 253

A customer is concerned about mesh backhaul link security. Which level of encryption does the backhaul link use?

- A. AES
- B. hash
- C. 3DES
- D. WEP

**Answer: A**

Explanation:

#### NEW QUESTION # 254

Refer to the exhibit. An engineer is about to establish a mobility peer connection between a Cisco Catalyst 9800-CL version 16.10.1e and Cisco AireOS 5520 version 8.8.120.0. The data path between the 9800-CL and AireOS 5520 is down, but its control path is up. Based on the configuration, what is the cause of the issue?

- A. The data-link-encryption configuration is missing from the 9800-CL configuration.
- B. Encrypted mobility is being used in the 5520 configuration, which causes the data path to be down.
- C. The data-dtls is disabled on the AireOS 5520 WLC, which causes the data path to be down.
- D. The certificate hash key is incorrect, which causes the data path to be down.

**Answer: C**

Explanation:

The data path being down while the control path is up indicates an issue with the data plane security configuration. The data-dtls setting on the AireOS 5520 WLC is responsible for enabling Datagram Transport Layer Security (DTLS) for the data plane, which encrypts the data traffic between the controllers. If this setting is disabled, the data path cannot be established securely, leading to the observed issue. Therefore, enabling data-dtls on the AireOS 5520 WLC is necessary to resolve the data path downtime.

#### NEW QUESTION # 255

When conducting a site survey for real-time traffic over wireless, which two design capabilities of smartphones and tablets must be considered? (Choose two.)

- A. no support for 802.11r
- B. lower data rates than laptops
- C. higher data rates than laptops
- D. no support for 802.11ac
- E. fewer antennas than laptops

**Answer: B,E**

Explanation:

#### NEW QUESTION # 256

An engineer is upgrading the legacy APs to 802.11ac Wave 2 capable APs. The existing gigabit uplinked switches provide 802.3at. Which switch limitation is a concern?

- A. collision domains
- B. interface throughput
- C. output power
- D. high availability

**Answer: C**

Explanation:

The concern with existing gigabit uplinked switches providing 802.3at is the output power limitation. 802.11ac Wave 2 APs may require more power than what 802.3at can deliver, especially for features like Multi-User Multiple Input Multiple Output (MU-MIMO).

### NEW QUESTION # 257

A wireless engineer is designing a wireless network for a warehouse using access points with internal antennas. Which two elements have a negative effect on the wireless users? (Choose two.)

- A. client authentication
- B. wireless channels
- C. access point height
- D. client authorization
- E. absorption

**Answer: C,E**

Explanation:
