The update version for CIS-SPM Exam Dumps will be sent to your email address automatically.

ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which related lists should primarily be used to capture financial data in a project?

Choose 2 answers

- A. Risks
- B. Cost Plans
- C. Monetary Benefit Plans
- D. Programs

Answer: B,C

Explanation:

Cost Plans and Monetary Benefit Plans are the related lists that should primarily be used to capture financial data in a project. Cost Plans allow you to define the expected costs of a project over time, based on the planned and actual work, resources, and expenses. Monetary Benefit Plans allow you to define the expected financial benefits of a project over time, based on the estimated and realized value, revenue, and savings. You can find more information about these related lists in the Product Documentation for ServiceNow.

NEW QUESTION # 78

Why is it recommended to keep the value of the property 'com.snc.project.task.max_task_duration' to 2600 or under?

- A. The system is unable to handle more than 2600 tasks.
- **B. To avoid application memory issues.**
- C. Because projects longer than 2600 days will no longer load.
- D. Best practices states projects should be no longer than 5 years.

Answer: B

NEW QUESTION # 79

Which role can configure the parameters of the demand workbench that is provided with the base system?

- A. All roles.
- B. it_project_manager.
- C. business_stakeholder.
- **D. it_pps_admin.**

Answer: D

Explanation:

Explanation

According to the Demand Workbench document, the role that can configure the parameters of the demand workbench that is provided with the base system is it_pps_admin. This role grants access to the Project Portfolio Suite application and allows the user to configure the demand workbench settings, such as the axes, the quadrants, the bubble size, and the color. The other options are not correct, as they are not roles that can configure the parameters of the demand workbench. The all roles option is too broad and does not specify a particular role. The business_stakeholder role grants access to the Business Stakeholder Portal and allows the user to view and submit demands. The it_project_manager role grants access to the Project Portfolio Management application and allows the user to create and update projects.

NEW QUESTION # 80

On the demand form, what does the Discount Rate impact?

- A. Internal Rate of Return %.
- B. Financial Benefit.
- **C. Net Present Value (NPV).**
- D. ROI.

Answer: C

Explanation:

According to the ServiceNow documentation¹, the discount rate on the demand form impacts the net present value (NPV) of the demand. The NPV is the difference between the present value of the benefits and the present value of the costs of the demand. The discount rate is the rate used to discount future cash flows to their present value. A higher discount rate means that future cash flows are worth less in the present, and vice versa. The other options are incorrect because:

A . ROI: The ROI (return on investment) is the ratio of the net value to the estimated cost of the demand. The discount rate does not affect the ROI, as both the net value and the estimated cost are based on the present value of the cash flows².

C . Financial Benefit: The financial benefit is the sum of the present value of the benefits of the demand. The discount rate does not affect the financial benefit directly, but only indirectly through the NPV calculation³.

D . Internal Rate of Return %: The internal rate of return % (IRR) is the discount rate that makes the NPV of the demand equal to zero. The discount rate does not affect the IRR, but rather the IRR is derived from the NPV equation⁴.

NEW QUESTION # 81

The color band at the top of the project card in Project Workspace displays what project attribute?

- A. Issues
- **B. Status**
- C. Risk
- D. State

Answer: B

Explanation:

According to the ServiceNow documentation¹, the color band at the top of the project card in Project Workspace displays the project status. The project status is a calculated field that indicates the health of the project based on the schedule, cost, and scope variance. The color band can be green, yellow, or red, depending on the status value. The other options are incorrect because:

B . Risk: The risk is a potential problem that could affect the project or its outcome. The risk level is displayed as a circle icon on the project card, not as a color band².

C . State: The state is the current phase of the project, such as Draft, Planning, Work in Progress, or Closed. The state is displayed as a text field on the project card, not as a color band³.

D . Issues: The issues are the actual problems that affect the project or its outcome. The number of issues is displayed as a badge icon on the project card, not as a color band⁴.
