

Analytics-Admn-201 Review Guide & Analytics-Admn-201 Exam Dumps Pdf

What's more, part of that Real4exams Analytics-Admn-201 dumps now are free: https://drive.google.com/open?id=1A8d2c3VCOA8_HIZirC5PPS8xQptFWmKK

Real4exams is determined to give hand to the candidates who want to pass their Analytics-Admn-201 exam smoothly and with ease by their first try. Our professional experts have compiled the most visual version: the PDF version of our Analytics-Admn-201 exam questions, which owns the advantage of convenient to be printed on the paper for it shows the entirety. In such a way, you can overcome your lack of confidence as well since you can have an overall look. The PDF version of our Analytics-Admn-201 Study Guide will provide you the easiest, the most flexible and leisure study experience to success.

Don't let outdated study materials hold you back from passing the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam. Our platform offers updated Analytics-Admn-201 exam dumps in three formats - PDF, web-based practice exams, and desktop practice test software - so you can study and prepare anytime, anywhere. With our reliable study materials, you can achieve your career goals and land a high-paying job in the technology industry. Don't waste your resources on outdated material - trust our platform to provide you with the actual and updated Salesforce Analytics-Admn-201 Practice Questions you need to succeed.

Pass Guaranteed Quiz 2026 Analytics-Admn-201: Salesforce Certified Tableau Server Administrator Latest Review Guide

As the labor market becomes more competitive, a lot of people, of course including students, company employees, etc., and all want to get Salesforce authentication in a very short time, this has developed into an inevitable trend. Each of them is eager to have a strong proof to highlight their abilities, so they have the opportunity to change their current status, including getting a better job, have higher pay, and get a higher quality of material, etc. It is not easy to qualify for a qualifying exam in such a short period of time. Our company's Analytics-Admn-201 Study Guide is very good at helping customers pass the exam and obtain a certificate in a short time, and now I'm going to show you our Analytics-Admn-201 exam dumps. Our products mainly include the following major features.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 2	<ul style="list-style-type: none"> Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 3	<ul style="list-style-type: none"> Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 4	<ul style="list-style-type: none"> Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 5	<ul style="list-style-type: none"> Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Salesforce Certified Tableau Server Administrator Sample Questions (Q27-Q32):

NEW QUESTION # 27

To which site role can you associate the Viewer user-based license level?

- A. Creator
- B. Explorer (can publish)
- C. Viewer
- D. Explorer

Answer: C

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and

the web interface. It corresponds to the Creator site role, not Viewer.

Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.

Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 28

What type of information is stored in the tsm maintenance backup `-f<filename>.tsbak` command?

- A. Repository data
- B. SMTP server settings
- C. Topology data
- D. Notification settings

Answer: A

Explanation:

The tsm maintenance backup command creates a backup file (with a .tsbak extension) that captures critical data needed to restore Tableau Server in case of failure or migration. This backup primarily includes:

Repository data: This encompasses the PostgreSQL database, which stores metadata such as workbooks, data sources, user information, permissions, schedules, and subscriptions.

Configuration data: This includes server settings like authentication methods, port configurations, and service layouts, but it does not include topology data as a separate entity (topology is part of the configuration).

The command does not back up the following:

Extract files (stored in the File Store), which must be backed up separately if needed.

Log files, which are archived using tsm maintenance ziplogs.

Option A (Notification settings) is incorrect because while notification settings are part of the configuration data stored in the repository, they are not the primary focus of the backup. The broader category is "repository data." Option B (SMTP server settings) is also incorrect for the same reason-SMTP settings are configuration data within the repository, but the backup is not limited to just these settings.

Option D (Topology data) is incorrect because topology data (e.g., how services are distributed across nodes) is part of the configuration included in the backup, but it's not stored as a standalone item. The .tsbak file is centered on the repository database.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" (https://help.tableau.com/current/server/en-us/backup_restore.htm).

NEW QUESTION # 29

What two types of users can sign in to Tableau Server and edit the permissions for a workbook in a project, when permissions are NOT set to Locked to the project? (Choose two.)

- A. Users that have the project and workbook Viewer role
- B. Users that have the workbook Interactor role
- C. Users set to Project Leader for the workbook's project
- D. The workbook's owner

Answer: C,D

Explanation:

Editing permissions on a workbook in Tableau Server depends on the user's role and the project's permission settings. Since permissions are not locked (i.e., "Managed by Owner"), let's dissect who can edit them:

* Permission Model:

* Not Locked: Owners of content (workbooks, data sources) can set permissions, and Project Leaders can override at the project level.

* Site Roles: Define maximum capabilities (e.g., Viewer, Explorer, Creator).

* Capabilities: "Set Permissions" is explicit-only certain users get it.

* Option C (The workbook's owner): Correct.

* Details: The owner (typically the publisher) has full control over their workbook when permissions are Managed by Owner:

- * How: In the UI, go to Content > Workbooks > Actions > Permissions-owners can edit rules (e.g., grant Editor to a group).
- * Site Role: Minimum of Explorer (can publish) or Creator to publish, ensuring "Set Permissions" capability.
- * Why: Ownership inherently includes permission management unless locked.
- * Option D (Users set to Project Leader for the workbook's project): Correct.
- * Details: Project Leaders are assigned via Content > Projects > Actions > Permissions > Set Project Leader:
- * Power: Can edit permissions for all content in the project, even if not the owner.
- * Site Role: Requires Site Administrator or Server Administrator (Creator/Explorer variants suffice).
- * Why: Overrides ownership in Managed by Owner mode-ensures project-level governance.
- * Option A (Users with project and workbook Viewer role): Incorrect.
- * Why: Viewer role (site-level) limits users to viewing-lacks "Set Permissions" capability, regardless of project/workbook rules.
- * Option B (Users with workbook Interactor role): Incorrect.
- * Why: "Interactor" isn't a standard role-likely a misnomer for Explorer or Viewer with interaction permissions (e.g., Filter). No permission-editing rights exist here.

Why This Matters: Knowing who can edit permissions prevents access control gaps-crucial for collaborative or regulated environments.

Reference: Tableau Server Documentation - "Permissions" (<https://help.tableau.com/current/server/en-us/permissions.htm>), "Project Leader Permissions" (https://help.tableau.com/current/server/en-us/permissions_project_leader.htm).

NEW QUESTION # 30

Which two tasks always require a server administrator? (Choose two.)

- A. Adding users
- B. Locking project permissions
- C. Adding a site
- D. Creating a schedule

Answer: A,C

Explanation:

In Tableau Server, roles and permissions dictate who can perform specific administrative tasks. A "server administrator" has full control over the entire Tableau Server deployment, while site administrators manage specific sites. Some tasks are restricted to server administrators due to their server-wide impact.

Option B (Adding a site): Creating a new site in a multi-site Tableau Server environment is a server-level task that only a server administrator can perform. Sites are logical partitions within the server, and adding a site affects the overall server structure. Site administrators cannot create new sites; they can only manage existing ones.

Option D (Adding users): Adding users to Tableau Server (e.g., via the TSM interface or tabcmd) is a server administrator task when it involves adding users at the server level or assigning them to the default site. While site administrators can add users to their specific site in a multi-site environment, the initial addition of users to the server requires server administrator privileges. The question's phrasing ("always require") suggests a server-wide context, making this a correct choice.

Option A (Creating a schedule): This is incorrect because both server administrators and site administrators can create schedules for tasks like extract refreshes or subscriptions within their scope. It's not exclusive to server administrators.

Option C (Locking project permissions): This is incorrect because locking project permissions can be done by a site administrator or project leader with appropriate permissions. It's a project-level action, not a server-level task requiring a server administrator.

Reference: Tableau Server Documentation - "Administrative Tasks" (https://help.tableau.com/current/server/en-us/admin_tasks.htm) and "User Management" (<https://help.tableau.com/current/server/en-us/users.htm>).

NEW QUESTION # 31

What Tableau Server authentication method should you configure to use OpenID Connect?

- A. SAML
- B. Active Directory
- C. Kerberos
- D. Local Authentication

Answer: A

Explanation:

Tableau Server supports multiple authentication methods, including Local Authentication, Active Directory, Kerberos, SAML, and

OpenID Connect. OpenID Connect (OIDC) is an identity layer built on OAuth 2.0, commonly used for single sign-on (SSO). In Tableau Server, OIDC is implemented as a variant of SAML (Security Assertion Markup Language) authentication because both are SSO protocols managed through the same configuration workflow.

To use OpenID Connect:

* Configure Tableau Server for SAML/SSO.

* Provide an OIDC-compatible identity provider (IdP) configuration (e.g., Google, Okta).

* Set up the IdP metadata and certificates in TSM.

* Option D (SAML): Correct. Tableau Server treats OIDC as a subset of its SAML authentication framework, so you configure it under the SAML settings in TSM.

* Option A (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, not an external SSO protocol like OIDC.

* Option B (Kerberos): Incorrect. Kerberos is a network authentication protocol for Windows environments, unrelated to OIDC.

* Option C (Active Directory): Incorrect. AD uses LDAP or Kerberos, not OIDC, for authentication.

Reference: Tableau Server Documentation - "Configure SAML and OpenID Connect" (https://help.tableau.com/current/server/en-us/saml_config.htm).

NEW QUESTION # 32

.....

With over a decade's business experience, our Analytics-Admn-201 test torrent attached great importance to customers' purchasing experience. There is no need to worry about the speed on buying electronic products. For we make endless efforts to assess and evaluate our Analytics-Admn-201 exam prep' reliability for a long time and put forward a guaranteed purchasing scheme. If necessary, you can also have our remotely online guidance to use our Analytics-Admn-201 Test Torrent. Normally, you can get our Analytics-Admn-201 practice questions in a few minutes after purchase with high efficiency!
