Free PDF Salesforce - Analytics-Con-201 –High-quality New Exam Pattern

To maximize your chances of your success in the Analytics-Con-201 Certification Exam, our company introduces you to an innovatively created exam testing tool-our Analytics-Con-201 exam questions. Not only that you will find that our Analytics-Con-201 study braindumps are full of the useful information in the real exam, but also you will find that they have the function to measure your level of exam preparation and cover up your deficiency before appearing in the actual exam.

Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q90-Q95):

NEW QUESTION # 90

A project team member uploads a CSV file to CRM Analytics, and they notice a few records failed during the upload. The manager wants to view the error log generated so this can be fixed and uploaded again. The manager has the CRM Analytics administrator permission but is unable to download the error log details.

Why is the manager unable to download the log details?

- A. They do not have the Upload External Data to CRM Analytics permission enabled.
- B. They do not have the Download CRM Analytics Data permission enabled.
- C. Only the user who uploaded the external data file can download the error log.

Answer: C

Explanation:

In CRM Analytics, when a CSV file is uploaded and errors occur during the upload process, an error log is generated. However,

only the user who uploaded the external data file can download the error log, even if other users have administrative permissions. This restriction ensures that only the user responsible for the data upload can access the details to resolve the issues.

NEW QUESTION # 91

A CRM Analytics administrator is working on deploying a dataflow and a dataset (generated by this dataflow) to another org. While creating a change set, they notice that the components are NOT visible to be included in the change set. What is the reason for this?

- A. Assets are kept in the Private App and are unavailable to include in the change set.
- B. The administrator does NOT have system administrator permission to include the assets In the change set,
- C. The administrator does NOT have access to the assets on CRM Analytics.

Answer: A

NEW QUESTION # 92

A user is able to access the dashboards, lenses, and datasets of a particular app but is unable to change the name of the specific app. What is causing the issue?

- A. The user does not have Editor access for that app.
- B. The user does not have Manager access for that app.
- C. The app name cannot be changed once created.

Answer: B

Explanation:

In CRM Analytics, the ability to modify the name of an app or make other significant changes typically requires Manager access. This level of access is distinct from Editor or Viewer permissions, which may allow for modifications to contents within the app but not to the app's core properties like its name. Here's the reasoning:

* Access Restrictions: Manager access is specifically designed to control structural changes within the app, including renaming the app, which is considered a higher privilege operation.

* Role-Based Access Control: This ensures that only users with the necessary permissions can make significant changes, protecting the integrity and configuration of the app.

Ensuring users have the appropriate level of access based on their responsibilities is a fundamental aspect of managing security and functionality in CRM Analytics.

NEW QUESTION # 93

Cloud Kicks has a dashboard that displays accounts and opportunities data in a table that contains actions to open the records in Salesforce. Since the company has allowed several accounts to be created with the same names, when users try to perform actions, they are prompted with only a record ID to select, leaving the users confused and unable to act.

How should the CRM Analytics consultant solve this problem?

- A. Insert more fields in the dataset action "Display Fields" so the users know which account they are acting on.
- B. Ask the admin to start applying duplicate rules based on the account's Name field.
- C. Discuss with the stakeholders If the action Is really necessary for the table.

Answer: A

NEW QUESTION # 94

The sales team at Cloud Kicks is requesting that datasets for their dashboards be refreshed every hour. The CRM Analytics consultant investigates if this is possible and finds that the dashboards use five datasets created from two recipes. The first recipe takes 43 minutes to run and the second recipe takes 25 minutes to run.

Which consideration should the consultant keep in mind?

- A. The number of concurrent recipe run limits that are associated with the org.
- B. The number of concurrent recipe runs can exceed the limit of two in a 24-hour rolling period.

- C. The total duration of the recipe runtimes can exceed the limit of 1 hour.

Answer: C

Explanation:

In CRM Analytics, recipes are used to prepare and combine data for datasets. The total duration of the recipe runtime is an important consideration when scheduling dataset refreshes. In this case, the combined runtime for both recipes (43 minutes + 25 minutes = 68 minutes) exceeds 1 hour. Since dataset refreshes cannot be scheduled more frequently than the total recipe runtime, it would be impossible to refresh the datasets every hour. This limitation must be considered when managing dataset refresh schedules.

NEW QUESTION # 95

.....

Under the support of our study materials, passing the exam won't be an unreachable mission. More detailed information is under below. We are pleased that you can spare some time to have a look for your reference about our Analytics-Con-201 test prep. As long as you spare one or two hours a day to study with our laTest Analytics-Con-201 Quiz prep, we assure that you will have a good command of the relevant knowledge before taking the exam. What you need to do is to follow the Analytics-Con-201 exam guide system at the pace you prefer as well as keep learning step by step.
