

Mule-Dev-202 Reliable Exam Braindumps Exam 100% Pass | Exam Mule-Dev-202 Cram

DOWNLOAD the newest Real4dumps Mule-Dev-202 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1FSapVXcZfv1MD2U_qVpGR12Vn4SEPI4J

We hold on to inflexible will power to offer help both providing the high-rank Mule-Dev-202 exam guide as well as considerate after-seals services. With our Mule-Dev-202 study tools' help, passing the exam will be a matter of course. It is our abiding belief to support your preparation of the Mule-Dev-202 study tools with enthusiastic attitude towards our jobs. And all efforts are paid off. The passing rate of exam candidates who chose our Mule-Dev-202 Exam Torrent is over 98 percent. All the knowledge is based on the real exam without the chance of failure. So we are never shirking duties and are totally trust-able. So please have a look of our Mule-Dev-202 exam torrent' traits and keep faithful to our Mule-Dev-202 exam guide.

First of all we have fast delivery after your payment in 5-10 minutes, and we will transfer Mule-Dev-202 guide torrent to you online, which mean that you are able to study as soon as possible to avoid a waste of time. Besides if you have any trouble coping with some technical and operational problems while using our Mule-Dev-202 exam torrent, please contact us immediately and our 24 hours online services will spare no effort to help you solve the problem in no time. As a result what we can do is to create the most comfortable and reliable customer services of our Mule-Dev-202 Guide Torrent to make sure you can be well-prepared for the coming exams.

Exam Mule-Dev-202 Cram & Valid Mule-Dev-202 Test Review

We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the Salesforce Certified MuleSoft Hyperautomation Developer exam preparation. Real4dumps provides you Salesforce Mule-Dev-202 Exam Questions in 3 different formats to open up your study options and suit your preparation tempo.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which API policy can be applied to limit the number of requests an individual client can make to an API?

- A. Client ID Enforcement
- B. Spike Control
- C. Rate limiting - SLA-Based
- D. OAuth 2.0 access token enforcement

Answer: C

Explanation:

The Rate Limiting - SLA-Based policy in Anypoint Platform is designed to control the number of requests an individual client can make to an API. This policy is highly configurable and allows you to set specific limits based on service level agreements (SLAs).

Rate Limiting - SLA-Based:

This policy helps protect APIs from being overwhelmed by too many requests by enforcing a limit on the number of requests a client can make within a specified time frame.

You can define different rate limits for different tiers of clients, ensuring fair usage and protecting backend services.

Anypoint Platform Rate Limiting Documentation

NEW QUESTION # 52

A Salesforce administrator asks for advice on how to build their Salesforce flow. They need to complete several DML actions as part of their Salesforce flow and are running into DML governor limits during testing.

Which two pieces of advice should be given to the Salesforce administrator to improve their flow? (Choose two.)

- A. Use DML statements at the end of the flow wherever possible.
- B. Use the upsert action to reduce the amount of DML statements required during the flow runtime.
- C. Avoid putting DML statements inside of For Loop occurrences.
- D. Loop through a collection variable to save more records with a single DML statement.

Answer: C,D

Explanation:

Avoid DML in For Loops: Placing DML (Data Manipulation Language) operations inside a loop can quickly exceed Salesforce governor limits, as each iteration performs a separate DML operation. It's best to collect records in a list and perform DML operations outside the loop.

Reference: Salesforce Governor Limits

Use Collection Variables: By looping through a collection variable and adding records to it, you can perform bulk DML operations, which are more efficient and less likely to hit governor limits.

Reference: Apex Collections and Bulk Processing

Use Upsert Action: Using the upsert action can reduce the number of DML statements by combining insert and update operations. However, this strategy depends on the specific flow requirements and data structure.

Reference: Salesforce Upsert Operation

DML Statements at the End: Consolidating DML operations to the end of the flow is advisable, but care should be taken to handle errors and exceptions appropriately.

Reference: Error Handling in Flows

NEW QUESTION # 53

Any Airlines is developing a new integration and wants built-in automated testing.

Which tool must be used to satisfy this requirement?

- A. MuleSoft Composer
- B. Flow Orchestration
- C. MuleSoft RPA
- D. Anypoint Platform

Answer: D

Explanation:

To implement built-in automated testing for new integrations at Any Airlines, the Anypoint Platform is the appropriate tool.

Anypoint Platform Capabilities:

Automated Testing: Anypoint Platform includes various tools such as MUnit for automated testing of Mule applications. MUnit allows

developers to create, design, and run tests natively within Anypoint Studio.

Test Automation Features:It supports comprehensive testing features including unit tests, integration tests, and mock services to ensure robust and reliable integrations.

Continuous Integration and Deployment:Anypoint Platform can be integrated with CI/CD pipelines, allowing automated tests to run as part of the deployment process, ensuring that any new code changes do not break existing functionality.

Why Not Other Options:

MuleSoft RPA:Primarily used for automating repetitive manual tasks, not for testing integrations.

MuleSoft Composer:Focuses on low-code integrations and automation, not specifically designed for automated testing.

Flow Orchestration:While useful for process automation within Salesforce, it does not provide the testing capabilities required for MuleSoft integrations.

References:

For detailed information on automated testing with Anypoint Platform and MUnit, refer to the official MuleSoft documentation

NEW QUESTION # 54

The Ops team at AnyAirlines needs to periodically check the status of an API to see if the connected database is down for maintenance.

Where should the Ops team set up a scheduled API call and view the status history?

- A. API Manager Analytics
- **B. API Functional Monitoring**
- C. API Manager Alerts
- D. API Monitoring Dashboard

Answer: B

Explanation:

To periodically check the status of an API and see if the connected database is down for maintenance, the Ops team should use API Functional Monitoring:

API Functional Monitoring:

API Functional Monitoring allows you to set up scheduled tests and monitor the functional performance of your APIs. It can be configured to periodically make API calls and check for specific conditions, such as whether the database is down for maintenance.

Scheduled API Calls:

Set up the necessary tests within API Functional Monitoring to periodically call the API and verify its status.

These tests can be scheduled to run at regular intervals.

View Status History:

API Functional Monitoring provides a dashboard where you can view the history of these tests, including their results and any failures. This helps in tracking the availability and performance of the API over time.

MuleSoft API Functional Monitoring Documentation

NEW QUESTION # 55

AnyAirlines releases a new REST API that exposes access to an RPA process. The RPA process can only handle a limited number of interactions per second before the API begins returning errors.

Which policy should AnyAirlines apply to prevent the API from being overloaded?

- A. JSON threat protection
- B. Client ID Enforcement
- C. Rate Limiting - SLA
- **D. Spike Control**

Answer: D

Explanation:

To prevent an API from being overloaded, the Spike Control policy is suitable. It helps manage sudden bursts of traffic by limiting the rate at which requests are processed. Here's how it works:

Preventing Overloads:

Spike Control smooths out bursts of incoming requests by enforcing a rate limit over a short period, protecting the backend systems from being overwhelmed by excessive traffic.

Configuration:

Apply the Spike Control policy to the API to define the maximum number of requests allowed within a specific timeframe. This ensures that the API can handle a limited number of interactions per second, preventing errors due to overload.

Implementation:

In Anypoint Platform, configure the Spike Control policy to the desired thresholds, ensuring the RPA process can handle the load effectively without errors.
