NEW QUESTION # 68
What does the Source Sequence reconciliation rule do in Identity Resolution?

- A. Includes data from sources where the data is alphanumerically sequenced
- B. Identifies which individual records should be merged into a unified profile by setting a priority for specific data sources
- C. Sets the priority of specific data sources when building attributes in a unified profile such as a first or last name
- D. Identifies which data sources should be used in the process of reconciliation by prioritizing the most recently updated data source

Answer: C

Explanation:
The Source Sequence reconciliation rule allows you to sort your data sources in order of most to least preferred for inclusion in a unified profile9. For example, you can specify that data from Marketing Cloud should have higher priority than data from Service Cloud when selecting attributes such as first name or last name.
