1 / 4

Here in this Desktop practice test software, the Dell PowerFlex Operate Exam (D-PWF-OE-00) practice questions given are very relevant to the actual EMC D-PWF-OE-00 exam. It is compatible with Windows computers. TestSimulate provides its valued customers with customizable Dell PowerFlex Operate Exam (D-PWF-OE-00) practice exam sessions. The EMC D-PWF-OE-00 practice test software also keeps track of the previous EMC D-PWF-OE-00 practice exam attempts.

With the help of D-PWF-OE-00 study materials, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam. With D-PWF-OE-00 study materials, you will not need to purchase any other review materials. We have hired professional IT staff to maintain D-PWF-OE-00 Study Materials and our team of experts also constantly updates and renew the question bank according to changes in the syllabus. With D-PWF-OE-00 study materials, you can study at ease, and we will help you solve all the problems that you may encounter in the learning process.

## EMC D-PWF-OE-00 Valid Braindumps Ppt With Interactive Test Engine & High Pass-rate Q&A

In the industry, D-PWF-OE-00 certifications have acknowledged respect that leads the certified professionals to the best work positions as per their career objectives. We materialize your dreams by offering you the top dumps. We help you sow the seeds for success. The comprehensive study content of our TestSimulate's D-PWF-OE-00 Dumps PDF is enough to cater all of your exam needs just at one spot.

## EMC Dell PowerFlex Operate Exam Sample Questions (Q37-Q42):

### NEW QUESTION # 37

Which components can be monitored via the PowerFlex GUI? (Choose two).

- A. System performance metrics
- B. Storage pool health
- C. Virtual machine backups
- D. Network latency

**Answer: A,B**

Explanation:

The PowerFlex Dashboard provides a high-level view of the storage environment.

\* Storage pool health (Option B): The GUI displays the capacity usage (Used vs. Free) and the health status (Green/Red) of all Storage Pools. It highlights if a pool is running out of space or has failed drives.

\* System performance metrics (Option D): The dashboard features real-time graphs showing IOPS (Input/Output Operations Per Second), Bandwidth (MB/s), and Latency (ms) for the overall cluster, as well as for individual volumes and SDS nodes.

Incorrect Options:

\* VM Backups (C) are managed by backup software (PowerProtect/Veeam), not the storage array GUI.

\* Network Latency (A) is usually a switch/network statistic. While PowerFlex shows I/O latency, it does not act as a general network monitoring tool for switch-level latency.

### NEW QUESTION # 38

Which logical entity must be configured before creating a Storage Pool?

- A. Fault Set
- B. Protection Domain
- C. Storage Data Server
- D. Resource Group

**Answer: B**

Explanation:

\* Protection Domain (Option B): The Protection Domain (PD) is the parent container in the PowerFlex hierarchy.

\* Hierarchy: Protection Domain  $\rightarrow$  Storage Pool  $\rightarrow$  Device (Disk).

\* Logic: A Storage Pool cannot exist in a vacuum; it must belong to a specific Protection Domain. The PD defines which group of SDS nodes the pool spans. You must create the PD first, add SDSs to the PD, and then create the Storage Pool inside that PD.

### NEW QUESTION # 39

Enabling Maintenance Mode on a node allows it to be removed from the cluster without impacting data availability. True. False.

- A. False
- B. True

**Answer: B**

Explanation:

\* True: The specific purpose of Protected Maintenance Mode (PMM) is to ensure data availability.

\* How it works: When you enable PMM on a node, the system checks the data chunks residing on that node. Before the node is allowed to effectively "leave" the cluster (stop serving I/O), PowerFlex copies (mirrors) that data to other nodes in the cluster. This ensures that even when the node is physically removed or rebooted, the cluster retains the required number of data copies (redundancy), ensuring no data is unavailable (DU) or lost (DL).

### NEW QUESTION # 40

What are the prerequisites for creating a Fault Set? (Choose two).

- A. Enabled deduplication

- B. Existing Storage Pool
- C. At least 3 nodes in the cluster
- D. Predefined Protection Domain

**Answer: C,D**

Explanation:

Fault Sets are a logical subdivision within a Protection Domain used to increase availability (e.g., ensuring that the three copies of data reside in three different racks).

\* Predefined Protection Domain (Option B): Fault Sets exist inside a Protection Domain. You cannot create a Fault Set floating in the void; it must be assigned to a parent Protection Domain.

\* At least 3 nodes in the cluster (Option A): PowerFlex uses a mesh-mirroring architecture. To guarantee availability, the system generally requires a minimum of 3 Fault Sets (so that if one fails, the data can be rebuilt to the other two). Since a Fault Set must contain at least one node, this implies a minimum requirement of 3 nodes (one per Fault Set) to utilize the feature effectively.

Note on Option C: You typically define Fault Sets before creating Storage Pools or adding SDSs in a greenfield deployment. If Storage Pools already exist, converting to Fault Sets is complex/restricted, so

"Existing Storage Pool" is not a prerequisite for creating the Fault Set structure itself.

#### NEW QUESTION # 41

What are the key considerations for volume replication in PowerFlex? (Choose two).

- A. Sufficient network bandwidth between clusters
- B. Predefined snapshot retention policies
- C. Identical storage pool configurations
- D. Compatible replication protocols

**Answer: A,D**

Explanation:

\* Sufficient network bandwidth (Option A): PowerFlex replication is typically asynchronous.

However, the link (WAN) between sites must be sized correctly to handle the change rate of the data. If the application writes 1GB/s but the WAN link is only 100MB/s, the replication buffer (Journal) will fill up, and compliance will break (RPO violation).

\* Compatible replication protocols (Option D): Both the source and target clusters must be running compatible versions of the PowerFlex software to understand the replication metadata and data stream format.

Incorrect Options: Storage pools do not need to be identical (C)-you can replicate from an NVMe pool to a cheaper HDD pool at the DR site. Snapshot retention (B) is a local backup setting, not a replication prerequisite.

#### NEW QUESTION # 42

.....

To some extent, to pass the D-PWF-OE-00 exam means that you can get a good job. The D-PWF-OE-00 exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our D-PWF-OE-00 Test Prep is compiled elaborately and will help the client get the D-PWF-OE-00 certification. To get a better and full understanding of our D-PWF-OE-00 quiz torrent, you can just free download the demo of our D-PWF-OE-00 exam questions.
