## MSSC CLT-4.0 Three formats

The content of our CLT-4.0 quiz torrent is imbued with useful exam questions easily appear in the real condition. We are still moderately developing our latest CLT-4.0 exam torrent all the time to help you cope with difficulties. All exam candidates make overt progress after using our CLT-4.0 Quiz torrent. By devoting ourselves to providing high-quality practice materials to our customers all these years, we can guarantee all content are the essential part to practice and remember. Stop dithering and make up your mind at once, CLT-4.0 test prep will not let you down.

## MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q22-Q27):

### NEW QUESTION # 22

The height of a ceiling is 120 feet. How high is it in meters?

1 yard = 0.914 meters

1 meter = 1.09 yards

- A. 109.76
- B. 43.6
- C. 130.8
- D. 36.7

**Answer: D**

Explanation:

CLT 4.0 emphasizes that logistics technicians must be comfortable with metric and U.S. customary unit conversions, as measurements affect storage design, equipment compatibility, and international shipping accuracy. To convert feet to meters: 1 yard = 3 feet → 120 ft = 40 yards.

Using 1 yard = 0.914 meters →  $40 \times 0.914 = 36.56$  meters, which rounds to 36.7 meters.

This conversion skill is critical when dealing with international specifications, as most global logistics operations use the metric system. Accurate conversions ensure correct space allocation, equipment clearances, and freight measurement for weight/volume-based shipping charges. Miscalculations can cause costly errors such as overloading, improper stacking, or container space misjudgment. CLT 4.0 modules in "Measurements and Conversions" stress accuracy in these calculations for operational safety and efficiency.

### NEW QUESTION # 23

Which inventory counting method is associated with the ABC inventory control method?

- A. random count
- **B. cycle count**
- C. wall-to-wall physical count
- D. demand count

**Answer: B**

Explanation:

The cycle count method is directly tied to ABC inventory control, where inventory items are classified based on value and turnover rate. CLT "Inventory Control" principles state that A-class items (high value or high usage) are counted most frequently, while B and C items are checked less often. This approach maintains high accuracy where it matters most while reducing unnecessary labor. Unlike wall-to-wall counts, cycle counting allows continuous verification without halting operations. The CLT framework teaches that successful cycle counting relies on well-organized locations, accurate labeling, and WMS integration. By combining ABC classification and cycle counting, organizations achieve precise inventory management and maintain data integrity across the supply chain.

### NEW QUESTION # 24

Which system is used to document the activities and locations of trailers or containers?

- **A. Yard Management System (YMS)**
- B. Inventory Management System (IMS)
- C. Material Requirements Planning (MRP) Software
- D. Enterprise Resource Planning (ERP)

**Answer: A**

Explanation:

A Yard Management System (YMS) is a logistics tool used to manage the movement, location, and status of trailers and containers within a distribution center's yard. CLT 4.0 describes YMS as an extension of warehouse management, providing real-time visibility into trailer positions, load status, and dock assignments. It coordinates yard jockey movements and reduces congestion, dwell time, and detention fees. Unlike an IMS or ERP—which manage inventory or enterprise data—YMS specifically enhances outbound/inbound trailer efficiency. It often integrates with WMS (Warehouse Management System) and TMS (Transportation Management System) for seamless dock scheduling and carrier communication.

### NEW QUESTION # 25

Which inventory control method has caused the definition of material handling to evolve away from "moving material" to providing all the "rights"?

- A. FIFO inventory control
- B. LIFO inventory control
- C. ABC inventory control
- **D. Just-In-Time inventory control**

**Answer: D**

Explanation:

JIT emphasizes delivering the right material, in the right quantity, to the right place, at the right time, with the right quality-minimizing waste and inventory. CLT notes how JIT shifts material handling from simple movement to synchronized flow and point-of-use delivery, often using kanban signals and small, frequent replenishments to support lean operations.

**NEW QUESTION # 26**

An electronic data interchange (EDI) notification of shipment of product is a/an

- A. Consignee
- B. Proof of Delivery (POD)
- **C. Advance Shipping Notice (ASN)**
- D. Air Waybill (AWB)

**Answer: C**

Explanation:

The Advance Shipping Notice (ASN) is an electronic message transmitted through EDI to notify the consignee of pending deliveries. The CLT dispatch/tracking framework identifies the ASN as a critical communication tool containing shipment details such as contents, quantities, carrier, and seal numbers. It allows the receiving facility to schedule dock appointments, allocate labor, and prepare for verification. Proof of Delivery confirms completion, not notification; Air Waybill applies to air freight; the consignee is the receiving entity. The ASN thus bridges outbound and inbound logistics, improving efficiency and data accuracy throughout the supply chain.

**NEW QUESTION # 27**

.....

DumpsTests provides 24/7 customer support to answer any of your queries or concerns regarding the Certified Logistics Technician (CLT) 4.0 (CLT-4.0) certification exam. They have a team of highly skilled and experienced professionals who have a thorough knowledge of the Certified Logistics Technician (CLT) 4.0 (CLT-4.0) exam questions and format.
