The experts and professors of our company have designed the three different versions of the NCP-EUC prep guide, including the PDF version, the online version and the software version. Now we are going to introduce the online version for you. There are a lot of advantages about the online version of the NCP-EUC exam questions from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment. More importantly, the online version of NCP-EUC study practice dump from our company can run in an off-line state, it means that if you choose the online version, you can use the NCP-EUC exam questions when you are in an off-line state. In a word, there are many advantages about the online version of the NCP-EUC prep guide from our company.

The NCP-EUC certification is ideal for IT professionals who are involved in the planning, deployment, and management of EUC solutions using Nutanix technologies. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is especially relevant for those who work in roles such as desktop administrators, virtualization administrators, and EUC architects. The NCP-EUC Certification is also suitable for IT professionals who are looking to enhance their skills and knowledge in the field of EUC solutions.

Current NCP-EUC Exam Content - New NCP-EUC Cram Materials

Do you want to find a high efficiency way to prepare for NCP-EUC exam test? As we all know, high efficiency will produce unbelievable benefits. With our Nutanix NCP-EUC study pdf, you can make full use of your spare time. If you are tired of screen reading, you can print NCP-EUC Pdf Dumps into papers. You take your spare time to prepare and study. You will get your NCP-EUC exam certification with less time investment. Come on, everyone, Choose NCP-EUC test dumps, you will succeed.

The NCP-EUC exam is a vendor-specific certification exam that is recognized by Nutanix, a leading provider of hyper-converged infrastructure (HCI) solutions. NCP-EUC exam covers a wide range of topics related to Nutanix VDI solutions, including installation, configuration, management, and troubleshooting of Nutanix VDI solutions. Candidates who Pass NCP-EUC Exam are

recognized as Nutanix Certified Professionals in End-User Computing.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q104-Q109):

NEW QUESTION # 104

Refer to the exhibit.

An administrator was made aware that user sessions are being randomly disconnected, and their applications and files being terminated. When the user launches new virtual desktop session, they are authenticated to a fresh desktop. upon investigating, the administrator discovers that most users log in at 9:00 AM and are active through 2:00 PM.

What configuration setting must be modified in order to resolve this issue?

- A. Idle timeout
- B. user inactivity timeout
- C. Max session duration
- D. Reservation timeout

Answer: C

Explanation:

Nutanix Frame has several session settings that can affect the user experience and resource utilization. One of these settings is Max session duration, which defines how long a user can stay connected to a Frame session before it is automatically terminated¹. If this setting is too low, users might experience random disconnections and lose their applications and files. Therefore, the configuration setting that must be modified in order to resolve this issue is A (Max session duration).

NEW QUESTION # 105

How should an administrator protect Writable AppVolumes during a disaster in a Nutanix environment?

- A. Enable HA reservations on the cluster to ensure there is capacity in case of failure.
- B. Create a protection domain and add the AppVolumes VM entities to it. Set up a schedule to replicate the VMS every 60 minutes.
- C. Disable HA reservations to ensure that VMS are powered on using best effort during a disaster,
- D. Create a storage container in both the primary and DR data centers for the Writeable AppVolumes. Set up asynchronous DR between the two sites.

Answer: D

Explanation:

Writable AppVolumes are a feature of VMware App Volumes that provides users with a dedicated virtual disk for storing user profile data and user-installed applications¹. Writable AppVolumes are stored as VMDK files on a datastore².

To protect Writable AppVolumes during a disaster in a Nutanix environment, one possible solution is to use asynchronous DR between two sites. Asynchronous DR allows you to replicate VMs and their associated data from one site to another at regular intervals using protection domains and remote sites³.

NEW QUESTION # 106

Users are reporting that their desktops are running slower than expected in an ESXi-based Nutanix cluster.

upon investigation, an administrator determines that desktops on one host are running slower and have higher CPU Ready times than on other hosts.

What is causing this issue?

- A. High Performance host power policy is enabled
- B. Inline Compression has been disabled on the desktop storage container
- C. Erasure coding's increased overhead has caused a slowdown in the environment
- D. High Performance host power policy is disabled

Answer: D

Explanation:

A high CPU Ready time means that the vCPU is waiting too long for the pCPU, which can result in poor performance and slow responsiveness of the virtual machine (VM).

According to Nutanix best practices², one of the factors that can affect CPU Ready time is the host power policy. The host power policy determines how aggressively the host will try to save power by reducing the frequency or voltage of the pCPUs.

The recommended host power policy for Nutanix clusters is High Performance, which disables any power saving features and ensures that the pCPUs run at their maximum frequency and voltage.

This answer seems to explain why desktops on one host are running slower and have higher CPU Ready times than on other hosts, as they may be suffering from reduced pCPU performance due to a lower host power policy.

NEW QUESTION # 107

An administrator has deployed a Windows 11 desktop pool brokered by VMware Horizon. When troubleshooting high CPU utilization and flash tier usage, it is noticed that flash tier usage ramps up quickly during business hours, but comes back down during off-hour curator scans.

What could explain this?

- A. Windows screensaver should be disabled.
- B. This is normal behavior, nothing to do.
- C. Indexing services need to be disabled.
- D. Flash mode should be enabled for the VM.

Answer: C

Explanation:

According to Nutanix "OmniStack Horizon on Nutanix Best Practices" (formerly VMware Horizon), Windows system services that create excessive background I/O must be optimized for VDI environments. Specifically, the Windows Search (Indexing) Service is a common cause of high CPU and disk I/O. In a non-persistent environment, if the indexing service is active, it continuously attempts to crawl the file system and update the index database during the user session. This generates a large number of small, random writes (IOPS) which land in the Flash Tier (Hot Tier/Oplog).

The behavior described—usage ramping up during business hours (as users create data/emails) and coming down during off-hours—aligns with the Curator process. Curator scans the cluster periodically (typically every 6 hours or during low load) to perform Tiering (moving cold data from SSD to HDD) and cleanup. If indexing is enabled, the "hot" index data fills the SSD tier during the day; Curator then destages this data or consolidates it during the scan. To resolve the performance impact and unnecessary flash consumption, the administrator must disable the Windows Search service or configure it correctly in the Golden Image.

NEW QUESTION # 108

A company has decided to use Citrix Optimizer tool to prepare their gold image.

Which two actions does Optimizer take to improve the gold image creation process? (Choose two.)

- A. uses built-in templates to perform optimizations.
- B. Optimizes storage capacity usage.
- C. Optimizes user environments for better performance
- D. Applies best practices for securing virtual desktops.

Answer: A,C

Explanation:

The Citrix Optimizer tool is used to prepare Windows operating system images for use in a virtual desktop environment. Some of the actions that it takes to improve the gold image creation process include:

Optimizes user environments for better performance: The tool removes unnecessary or redundant services, features, and applications from the image, which can improve performance and reduce resource usage.

Uses built-in templates to perform optimizations: The tool comes with pre-configured templates that are optimized for specific environments, such as virtual desktops or server workloads. These templates can be customized based on the specific needs of the organization.
