Salesforce Arch-303 Valid Test Fee & Arch-303 New Soft Simulations

You can customize the time and Salesforce Arch-303 questions of our Salesforce Certified B2C Commerce Architect (Arch-303) practice exams according to your needs. Real Salesforce Arch-303 exam environment which our web-based and desktop Arch-303 Practice Exams create is beneficial to get accustomed to the real Arch-303 exam pattern.

Salesforce Certified B2C Commerce Architect Sample Questions (Q34-Q39):

NEW QUESTION # 34

A client has a single site with multiple domains, locales, and languages. After launch, there is a need for the client to perform offline maintenance. The client would like to show the same maintenance page for each locale.

Which version of aliases, Json file below will accomplish this task?

• A.

• B.

• C.

• D.

Answer: B

Explanation:

Option C correctly addresses the requirement for showing the same maintenance page across multiple locales by having each different domain alias ("nto.eu", "nto.at", "nto.de") mapped to the same www domain ("www.nto.eu"). This setup allows all traffic, regardless of the original locale-specific domain, to be directed to a single, unified maintenance page hosted under the "www.nto.eu" domain. This ensures consistency in the maintenance message presented to all users, irrespective of their regional domain.

NEW QUESTION # 35

During code review, the Architect found that there is a service call on every visit of the product detail woe (PDP).

What best practices should the Architect ensure are followed for the service configuration?

Choose 2 answers

- A. Service timeout is set.
- B. Circuit breaker is enabled.
- C. Service logging is disabled.
- D. Service mock up call is configured.

Answer: D

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

* Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

* Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

* Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.

NEW QUESTION # 36

a B2C Commerce developer has Implemented a job that connects to an SFTP, loops through a specific number of .csv files. and Generates a generic mapping for every file. In order to keep track of the mappings imported, if a generic mapping is created successfully, a custom object instance is created with the .

csv file name. After running the job in the Development instance, the developer checks the Custom Objects in Business Manager and notices there isn't a Custom Object for each csv file that was on SFTP.

What are two possible reasons that some generic mappings were not created? Choose 2 answers

- A. The maximum number of generic mappings was reached.
- B. Invalid format in one or more of the .csv files.
- C. The generic mappings definition need to be replicated from Staging before running the job.
- D. The job needs to run on Staging and then replicate the generic mappings and custom objects on Development

Answer: A,B

Explanation:

Two plausible reasons for some generic mappings not being created despite the SFTP job running are: A) the system reached its limit for the maximum number of generic mappings allowed, and C) there was an invalid format in one or more of the .csv files processed. When the maximum threshold for mappings is reached, the system cannot create additional mappings, thus stopping any further imports from being registered as custom objects. Additionally, if .csv files are incorrectly formatted, the job would fail to create mappings for those files, leading to the absence of corresponding custom objects in Business Manager. It's crucial to ensure that file formats adhere to expected specifications and that system limits are adequately managed to avoid such issues.

NEW QUESTION # 37

A Retailer has a single storefront site and a Product Management System (PIM). The PIM is Generating the master catalog and storefront categorization catalog every day and it uploading them to SFTP how should the Architect configure the import job flows following the best practices?

- A. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to Import the master catalog. 3rd flow K global to Import the storefront catalog.
- B. 1st flow is global to download the files from SFTP. 2nd flow is global to import the master catalog. 3rd flow Is global to Import the storefront catalog.
- C. 1st flow is global to download the files from SFTP. 2nd flow is global to import the storefront catalog
3rd flow K global to Import the master catalog.
- D. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to Import the storefront catalog 3rd flow It global to Import the master catalog.

Answer: C

Explanation:

For optimal job flow concerning data import from a PIM system, the sequence should begin with downloading files globally from an SFTP site, followed by importing data into the B2C Commerce platform:

* First flow: Download files, ensuring all required files are available and ready for import.

* Second flow: Import the storefront catalog which likely has dependencies on the master catalog but is generally smaller and can be updated more rapidly.

* Third flow: Import the master catalog, as it typically contains the foundational data needed for various site functionalities.

This sequence respects data dependency and integrity, ensuring that the storefront reflects the most current and accurate information after all relevant data is imported.

NEW QUESTION # 38

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

```

var LocalServiceRegistry = require('dw/svc/LocalServiceRegistry');
module.exports = LocalServiceRegistry.createService('serviceprovider.rest.auth',
{
    createRequest: function(svc) {
        var svcCredential = svc.getConfiguration().credential;
        if (empty(svcCredential.user) || empty(svcCredential.password)) {
            throw new Error('Basic Auth requires valid client ID (user) and secret (password)');
        }
        var requestBody = {
            clientId: svcCredential.user,
            clientSecret: svcCredential.password
        };
        svc.setAuthentication('NONE');
        svc.addHeader('Accept', 'application/json');

        return JSON.stringify(requestBody);
    },
    parseResponse: function(svc, httpClient) {
        return httpClient.text;
    }
}
);

```

How does this code sample accomplish authentication to the service provider?

- A. By wrapping the authentication service call with Basic Auth.
- B. By Issuing a Basic Auth request to the service provider.
- C. By performing a signed SOAP Auth request using a certificate.
- D. By disabling Basic Auth and executing the service authentication call.

Answer: D

Explanation:

The code sample shows the creation of a service request to a third-party service provider, where the authentication method is explicitly set to 'NONE' using the line `svc.setAuthentication("NONE")`. This configuration implies that the request does not use Basic Authentication or any embedded credentials like client ID and secret in the HTTP headers for authentication purposes. Instead, it builds the authentication details into the request body, which suggests that the service expects credentials as part of the payload rather than as part of the standard authentication headers, thus effectively disabling Basic Auth for this transaction.

NEW QUESTION # 39

.....

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the Arch-303 Study Materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our Arch-303 study materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products. We provide free trial service before the purchase, the consultation service online after the sale, free update service and the refund service in case the clients fail in the test.
