Fortinet EMEA-Advanced-Support certification exam is among those popular IT certifications. It is also the dream of ambitious IT professionals. This part of the candidates need to be fully prepared to allow them to get the highest score in the EMEA-Advanced-Support Exam, make their own configuration files compatible with market demand.

You may never have thought that preparing for the upcoming EMEA-Advanced-Support certification exam would be so simple. The good news is that the EMEA-Advanced-Support exam material of our TroytecDumps has been successful for all users who have used it to think that passing the exam is a simple matter! After using our EMEA-Advanced-Support exam materials, they all passed the exam easily and thought it was a valuable learning experience. Learn and practice our EMEA-Advanced-Support exam questions during the preparation of the exam, it will answer all your doubts. This process of learning left a deep impression on candidates. The exciting EMEA-Advanced-Support Exam Material is a product created by professionals who have extensive experience in designing exam materials. These professionals have an in-depth understanding of the candidate's questions and requirements, so our EMEA-Advanced-Support exam questions meets and exceeds your expectations. Learn and practice our exams so that you can easily pass candidates and have a valuable learning experience.

For candidates, the quality is the first consideration when you buy EMEA-Advanced-Support exam materials. With the professional specialists to compile the EMEA-Advanced-Support exam braindumps, we can ensure you that the quality and accuracy is quite high. We have a professional team to study the first-hand information for the EMEA-Advanced-Support Exam brainfumps, and so that you can get the latest information timely. Besides, we offer you free demo to have a try before buying, so that you can know the form of the complete version of the EMEA-Advanced-Support exam dumps. If any other questions, just contact us.

### Fortinet EMEA Advanced Support Exam Sample Questions (Q49-Q54):

#### NEW QUESTION # 49

Which of the following is a network monitoring protocol?

- A. RDP
- B. SSH

- C. Telnet
- **D. SNMP**

**Answer: D**

Explanation:

SNMP (Simple Network Management Protocol) is specifically designed for monitoring and managing network devices, allowing administrators to query device status, performance metrics, and configure alerts for issues. It operates by using agents on devices that report to a central manager. In contrast, RDP is for remote desktop access, Telnet for unsecure remote command-line access, and SSH for secure remote access. SNMP is the standard protocol for network monitoring in Fortinet products like FortiGate, FortiSwitch, etc. Exact extract: SNMP enables administrators to monitor how devices are performing and make changes to network devices so that data moves through the network more efficiently. Simple Network Management Protocol (SNMP) enables you to monitor hardware on your network. The FortiSwitch SNMP implementation is read- only. Monitoring FortiAP with SNMP. You can enable SNMP directly on FortiAP by implementing a SNMPPD daemon/subagent on the FortiAP side. The Simple Network Management Protocol (SNMP) allows you to monitor hardware on your network. You can configure the hardware, such as the FortiProxy SNMP agent.

#### NEW QUESTION # 50

What does the FortiGate 'set nat enable' command do in a firewall policy?

- A. Forces NAT to use a specific IP pool
- **B. Enables NAT for outgoing traffic**
- C. Enables NAT for incoming traffic only
- D. Disables NAT for the policy

**Answer: B**

Explanation:

The 'set nat enable' command in a FortiGate firewall policy enables Source NAT (SNAT) for outgoing traffic, typically rewriting the source IP to the FortiGate's interface IP or an IP pool. It does not disable NAT (B), force a specific pool (C), or limit to incoming traffic (D). Exact extract: "The 'set nat enable' command in a firewall policy enables Source NAT, rewriting the source IP address of outgoing traffic to the egress interface IP or a configured NAT pool."

#### NEW QUESTION # 51

Link aggregation allows network devices to \_\_\_\_\_

- A. None of the above
- B. Increase bandwidth of an interface
- **C. Increase bandwidth by binding physical interfaces into a single channel**
- D. Restrict the bandwidth

**Answer: C**

Explanation:

Link aggregation, also known as IEEE 802.3ad or 802.1ax, enables the binding of multiple physical interfaces to form a single logical interface, which increases the overall bandwidth and provides redundancy. This is achieved by combining the bandwidth of the individual links into one aggregated link. For example, if two 1Gbps interfaces are aggregated, the logical link can provide up to 2Gbps bandwidth. This configuration is commonly used in FortiGate devices to enhance network performance without replacing hardware. The option B correctly describes this by stating "Increase bandwidth by binding physical interfaces into a single channel," which aligns with the official description. Incorrect options include A, which is vague and does not specify the method of binding multiple interfaces; C, which is the opposite of the purpose; and D, which is invalid.

Exact extract: Link aggregation (IEEE 802.3ad/802.1ax) enables you to bind two or more physical interfaces together to form an aggregated (combined) link. This new link ... Link aggregation combines multiple physical interfaces into a single logical interface, increasing bandwidth and link redundancy. Traffic is distributed evenly.

#### NEW QUESTION # 52

Which statement is true about IPsec VPNs and SSL VPNs?

- A. Both SSL VPNs and IPsec VPNs are standard protocols
- **B. All of the above**
- C. SSL VPN creates a HTTPS connection. IPsec does not
- D. Either a SSL VPN or an IPsec VPN can be established between an end-user workstation and a FortiGate device

**Answer: B**

Explanation:

Both SSL VPN and IPsec VPN are standard protocols supported by FortiGate devices for secure remote access. SSL VPN typically uses HTTPS (TCP port 443) for encrypted communication, while IPsec uses protocols like IKE and ESP. Both can be configured between an end-user workstation (e.g., via FortiClient) and a FortiGate device, supporting various authentication methods. All options are correct, making D the correct answer. Exact extract: "SSL VPN technology uses the standard SSL/TLS protocol to provide a secure connection to the FortiGate unit. The FortiGate SSL VPN can be configured to use HTTPS..." and "IPsec VPNs use standardized protocols like IKE and ESP to create secure tunnels... FortiClient supports both IPsec and SSL VPN connections to FortiGate devices for remote access."

### NEW QUESTION # 53

Which of the below technology(ies) could reduce CPU load and memory utilization used by an IPS engine?

- **A. Using IPS sensors and IPS filter to determine which traffic should be examined for which signatures, instead of examine network traffic for all signatures**
- **B. Using regular instead of extended database, to reduce memory footprint**
- **C. IPS does not compare traffic to each signature individually. Instead it compiles them into a decision tree**
- D. Using multiple engines, aligned with load balancing technologies like Turbo that uses round robin algorithms to dispatch traffic up to specific IPS engine
- E. All of the above

**Answer: A,B,C**

Explanation:

IPS efficiency is improved by: A) Compiling signatures into a decision tree to reduce comparison overhead; B) Using IPS sensors/filters to selectively apply signatures to relevant traffic, reducing unnecessary processing; D) Using a regular database instead of an extended one to lower memory usage. Option C's

"Turbo" and round-robin load balancing is not a standard Fortinet IPS feature. Option E is incorrect as C is not valid. Exact extract: "IPS efficiency is improved by compiling signatures into decision trees to minimize CPU usage... IPS sensors and filters allow selective signature application to reduce processing... Using the regular signature database instead of extended reduces memory footprint."
