Cisco Designing Cisco Security Infrastructure Sample Questions (Q41-Q46):

NEW QUESTION # 41

What is the primary benefit of conducting a root cause analysis after a security incident?

- A. Validate OSI model compliance
- B. Enable compliance with NTP standards
- C. Improve FTP throughput
- D. Drive design improvements to prevent recurrence

Answer: D

Explanation:

Root cause analysis focuses on identifying the underlying cause of a security incident. This enables organizations to improve system design, controls, or processes so that similar incidents do not happen again, rather than only fixing symptoms.

NEW QUESTION # 42

An administrator at a large university wants to ensure that the new employees have the right level of access when they are onboarded. The administrator asked the team to configure the cloud environment and ensure that new employees have the appropriate access based on their roles and responsibilities. Which technique must be recommended to ensure the right level of access?

- A. security groups
- B. identity access management
- C. network access control list
- D. VPN

Answer: B

Explanation:

Identity Access Management (IAM) enforces role-based access control, ensuring that new employees are automatically given the correct permissions aligned with their roles and responsibilities. This approach secures the cloud environment by preventing excessive or inappropriate access.

NEW QUESTION # 43

Considering recent cybersecurity threats, a company wants to improve the process for identifying, assessing, and managing risks with a comprehensive and holistic approach. Which framework must be used to meet these requirements?

- A. GDPR
- B. MITRE CAPEC
- C. NIST SP 800-37
- D. HIPPA

Answer: C

Explanation:

For an organization seeking a "comprehensive and holistic approach" to risk management, the NIST SP 800-37 (Risk Management Framework - RMF) is the industry-standard recommendation. The RMF provides a structured, seven-step process for managing security and privacy risk: Prepare, Categorize, Select, Implement, Assess, Authorize, and Monitor.

According to the Cisco SDSI objectives, the NIST RMF allows organizations to align their security controls with their business goals and risk tolerance. It moves security beyond a simple "checklist" and into a continuous lifecycle of improvement. HIPAA (Option A) and GDPR (Option D) are regulatory mandates focused on specific data types (Health and Privacy, respectively) rather than a general framework for all organizational risks. MITRE CAPEC (Option B) is a dictionary of attack patterns used for technical threat modeling, not a holistic risk management process. By adopting NIST SP 800-37, a company ensures that its security infrastructure is designed and maintained based on a rigorous assessment of the current threat landscape and organizational requirements, fulfilling the core requirements of the "Risk, Events, and Requirements" domain.

NEW QUESTION # 44

Which financial reporting regulatory framework must a publicly traded company doing business in the US comply with?

- A. SOX
- B. HIPAA
- C. FEDRAMP
- D. SOC

Answer: A

Explanation:

Publicly traded companies in the United States must comply with the Sarbanes-Oxley Act (SOX).

This regulation mandates strict standards for financial reporting, internal controls, and data integrity to protect investors from fraudulent financial practices.

NEW QUESTION # 45

Which two metrics are important for evaluating the performance of automated security response workflows? (Choose two.)

- A. Mean Time to Respond (MTTR)
- B. Mean Time to Detect (MTTD)
- C. CPU temperature
- D. VLAN propagation speed

Answer: A,B

Explanation:

MTTD measures how quickly incidents are detected, and MTTR measures how quickly they are resolved. Together, they indicate the effectiveness of automated security response workflows.
