Free PDF Quiz Unparalleled VMware - 6V0-22.25 Valid Exam Tutorial

Our company employs the first-rate expert team which is superior to others both at home and abroad. Our experts team includes the experts who develop and research the 6V0-22.25 study materials for many years and enjoy the great fame among the industry, the senior lecturers who boost plenty of experiences in the information about the exam and published authors who have done a deep research of the 6V0-22.25 Study Materials and whose articles are highly authorized. They provide strong backing to the compiling of the 6V0-22.25 study materials and reliable exam materials resources. They compile each answer and question carefully.

VMware Avi Load Balancer 30.x Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

An administrator is troubleshooting an application where some users are being unexpectedly logged out. The application maintains session state using a cookie named JSESSIONID. The administrator finds a log entry for one of the affected users. Which pieces of information within a detailed log view would be most helpful in diagnosing this issue? (Choose 2.)

- A. The Server IP address.
- B. The Connection End Type.
- C. The Response Headers section.
- D. The Virtual Service name.
- E. The Request Headers section.

Answer: C,E

NEW QUESTION # 45

A vSphere Administrator is deploying a new critical application that cannot tolerate any downtime, even during a Service Engine failure. The application's traffic load requires the capacity of approximately three Service Engines. To provide both high availability and performance, the administrator scales the Virtual Service out to four Service Engines. What HA model does this configuration represent for the Virtual Service?

- A. N+M, where N=3 and M=1
- **B. Active/Active**
- C. Cold Standby
- D. Active/Standby

Answer: B

NEW QUESTION # 46

An administrator is creating a new Virtual Service to load balance traffic to a pool of web servers. The administrator wants to use a specific FQDN (e.g., shop.example.com) for the service address instead of an IP address. How can this be achieved during the Virtual Service creation?

Virtual Service Creation Wizard > Step 1

VS Name: vs-shop-prod

Service IP Address: [?]

Application Domain Name: [?]

- **A. The FQDN should be entered in the 'Application Domain Name' field, and Avi will automatically handle the DNS registration.**
- B. The administrator must first create a DNS record for the FQDN pointing to a free IP, then use that IP as the VIP.
- C. The FQDN must be entered into the 'Service IP Address' field.
- D. This is not possible; a Virtual Service must be created with an IP address first, then the FQDN can be added later.

Answer: A

NEW QUESTION # 47

A vSphere Administrator has configured a vCenter cloud in Avi, but the cloud status is red and shows the error "No valid templates found for Service Engine creation". The administrator has confirmed that the Avi Controller's service account has sufficient permissions in vCenter. What are the most likely reasons for this error? (Choose 2.)

- **A. The administrator did not use the Avi UI to upload the Service Engine OVA to the Controller so it could be pushed to vCenter.**
- B. The administrator has not yet created a Service Engine Group.
- C. The Avi Controller has not been rebooted after the cloud configuration.
- **D. The administrator did not upload the Service Engine OVA file to the vCenter Content Library.**
- E. The vCenter cloud is configured in 'Read Access' mode.

Answer: A,D

NEW QUESTION # 48

An Operator is troubleshooting an application and needs to find the public-facing IP address that clients use to access it. In the context of the Avi object model, which object's configuration would contain this IP address?

- **A. The Virtual Service**
- B. The Service Engine Group
- C. The Pool
- D. The Health Monitor

Answer: A
