There is a high demand for HP Development certification, therefore there is an increase in the number of HP HPE7-J02 exam candidates. Many resources are available on the internet to prepare for the Advanced HPE Storage Integrator Solutions Written Exam exam. Prep4pass is one of the best certification exam preparation material providers where you can find newly released HP HPE7-J02 Dumps for your exam preparation. With years of experience in compiling top-notch relevant HP HPE7-J02 dumps questions, we also offer the HP HPE7-J02 practice test (online and offline) to help you get familiar with the actual exam environment.

You will be feeling be counteracted the effect of tension for our HP HPE7-J02 practice dumps can relieve you of the anxious feelings. Our Advanced HPE Storage Integrator Solutions Written Exam practice materials are their masterpiece full of professional knowledge and sophistication to cope with the HP HPE7-J02 Exam. They have sublime devotion to their career just like you, and make progress ceaselessly.

As you know, there are so many users of our HPE7-J02 guide questions. If we accidentally miss your question, please contact us again and we will keep in touch with you. Although our staff has to deal with many things every day, it will never neglect any user. With the development of our HPE7-J02 Exam Materials, the market has become bigger and bigger. Paying attention to customers is a big reason. And we believe that with the supports of our worthy customers, our HPE7-J02 study braindumps will become better.

## HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q47-Q52):

### NEW QUESTION # 47

You are working with a customer to upgrade their current VMware infrastructure. The hardware is outdated, and the customer has no information about performance requirements for the new servers and storage array.

You are using HPE CloudPhysics to run an assessment.

Which Card Deck will give you insights on the under- and overprovisioning of the current environment?

- A. Infrastructure Planning
- B. Simulator for VM Rightsizing
- C. Storage Space Management
- D. Reclaimable VMware vDisk Space

**Answer: B**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

The Simulator for VM Rightsizing Card Deck in HPE CloudPhysics evaluates actual VM utilization against provisioned resources. It identifies under- and overprovisioned VMs, providing insights into reclaimable resources and accurate sizing recommendations. This directly helps plan server and storage upgrades.

Distractors:

A: Storage Space Management focuses on datastore usage trends, not provisioning mismatches.

B: Reclaimable VMware vDisk Space identifies unused storage, not CPU/RAM sizing.

D: Infrastructure Planning helps plan new builds but doesn't directly analyze current over/under provisioning.

Key Concept: VM Rightsizing = CloudPhysics tool for over/under provisioning analysis.

### NEW QUESTION # 48

Exhibit shows HPE StoreOnce Catalyst Store Security Settings:

□ Server Controlled Data Immutability enabled (7 days).

Maximum ISV Controlled Data Immutability Retention (90 days).

Which statement is correct?

- A. Server-Controlled Data Immutability is required to achieve the highest immutability with Veeam v12 backups.
- B. The Maximum ISV Controlled Data Immutability Retention parameter must be set to 0 for optimal Veeam v12 support.
- **C. Maximum ISV Controlled Data Immutability Retention allows the ISV backup application to manage item-level immutability.**
- D. Server-Controlled and ISV-Controlled Data Immutability values do not need to match when both are configured.

**Answer: C**

### NEW QUESTION # 49

Which statement is correct when deploying an HPE Zerto DR solution where an Extended Journal Copy is required with a one-year retention period?

- A. HPE Zerto supports a maximum of 30-day retention and cannot exceed this period.
- B. An additional license is required to enable the Extended Journal Copy feature.
- **C. HPE Zerto integrates with HPE StoreOnce to enable long-term retention for Extended Journal Copies.**
- D. Extended Journal Copies always come from the target site to avoid impact on the production site.

**Answer: C**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Zerto Extended Journal allows retention up to one year by integrating with secondary storage like HPE StoreOnce. Short-term journals (seconds to days) reside on primary replication storage, while long-term copies (weeks/months/years) are offloaded to StoreOnce for cost-efficient retention.

Distractors:

A: No separate license is required - it is a standard Zerto feature when integrated.

C: Extended Journals can be sourced from production or target, depending on setup; not "always" target.

D: Incorrect - Zerto supports >30 days retention with Extended Journal.

Key Concept: Zerto + HPE StoreOnce for long-term DR retention.

### NEW QUESTION # 50

Your customer has deployed an HPE Alletra MP B10000 array in its virtualized environment. Data protection follows 3-2-1 best practices, with snapshots on the array, Veeam v12 backups, and storage on an external HPE StoreOnce appliance. Despite this, a ransomware attack made data recovery impossible.

Your customer asks how to enhance data protection with immutability and application consistency.

What is a possible solution using HPE Virtual Lock technology?

- A. Enable Virtual Lock on the HPE Alletra storage array
- B. Enable Virtual Lock for each backup job inside Veeam v12
- C. Enable Virtual Lock on the VMware datastores in VMware vCenter
- **D. Enable Virtual Lock on the HPE StoreOnce Catalyst stores**

**Answer: D**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Option C is correct because HPE StoreOnce Virtual Lock technology provides immutability at the Catalyst store level, preventing backup data from being deleted or modified for a defined retention period.

This ensures ransomware or malicious actors cannot encrypt, alter, or delete the protected backups, aligning with modern data protection requirements for immutability and compliance. In integration with Veeam v12, backups stored on StoreOnce Catalyst stores can be locked, creating an additional immutability layer beyond application-consistent snapshots.

Analysis of Incorrect Options (Distractors):

A: Virtual Lock is not a Veeam feature. While Veeam v12 supports immutability on certain storage backends (object lock-enabled S3, hardened Linux repositories), HPE Virtual Lock is specific to StoreOnce Catalyst stores, not Veeam job settings.

B: VMware vCenter datastores do not have a native immutability feature. Snapshots in vCenter can be deleted or corrupted during ransomware events, making this option incorrect.

D: HPE Alletra arrays support application-consistent snapshots and replication, but they do not provide the immutability guarantee that StoreOnce Virtual Lock enforces. Array-level snapshots can still be deleted if admin credentials are compromised.

Key Concept:

This question targets knowledge of HPE StoreOnce Virtual Lock - a feature designed to enforce immutability on Catalyst backup stores, making backup data resistant to deletion or alteration during ransomware or insider attacks.

## NEW QUESTION # 51

Select the scenario where implementing FCoE would be an appropriate solution.

- A. A corporation needs to replicate data between data centers in different countries. The data must be synchronized in real-time across a WAN, and the solution must tolerate variable network conditions with minimal impact on performance.
- B. A company with data centers in different states wants to establish a unified SAN infrastructure. The goal is to centralize storage management across all sites, using a single protocol that can efficiently handle high-latency, long-distance connections between data centers.
- C. A tech startup is developing an AI-based application that relies heavily on machine learning models. The team needs a solution that allows them to access and process large datasets in the cloud.
- **D. A large enterprise data center with existing Fibre Channel SANs is looking to reduce hardware complexity and costs by consolidating their storage and production networks onto a single infrastructure, while maintaining high performance for mission-critical applications.**

**Answer: D**

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Option A is correct because Fibre Channel over Ethernet (FCoE) is designed for large enterprise environments that already have Fibre Channel (FC) infrastructures but want to simplify cabling and reduce hardware by converging LAN and SAN traffic over a single Ethernet fabric. FCoE retains the efficiency, low latency, and reliability of Fibre Channel while leveraging Ethernet to minimize physical infrastructure costs.

This aligns with HPE's best practices for environments using HPE Alletra 9000/Primera or HPE Nimble arrays connected to converged networks where cost reduction and high performance are equally important.

Analysis of Incorrect Options (Distractors):

B: Real-time replication across WANs requires protocols like HPE 3PAR/Alletra Remote Copy, asynchronous/synchronous replication, or HPE Peer Persistence. FCoE is not suited for high-latency WANs because it is a LAN protocol designed for short distances within a data center.

C: For inter-data center SAN unification, FCIP (Fibre Channel over IP) or iSCSI are more suitable. FCoE does not handle long-distance high-latency links effectively.

D: A startup building AI applications with cloud workloads typically benefits from object storage (HPE Scality RING, HPE GreenLake for File and Object) or direct cloud-native APIs (S3/Blob). FCoE is irrelevant in this use case since it is on-prem and infrastructure-focused.

Key Concept:

The question is testing knowledge of FCoE and its appropriate deployment scenarios - specifically, its role in consolidating storage and network traffic inside enterprise data centers while preserving Fibre Channel protocol advantages.
