## SAP C-ACDET-2506 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.</li></ul> |

|         |  |
|---------|--|
| Topic 2 | <ul style="list-style-type: none"> <li>• <b>Project Overview, Roles and Responsibilities:</b> This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.</li> </ul> |
| Topic 3 | <ul style="list-style-type: none"> <li>• <b>Field Configuration:</b> This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.</li> </ul>                         |

## Pass Guaranteed SAP - Perfect C-ACDET-2506 Trusted Exam Resource

There are more and more people to try their best to pass the C-ACDET-2506 exam, including many college students, a lot of workers, and even many housewives and so on. These people who want to pass the C-ACDET-2506 exam have regard the exam as the only one chance to improve themselves and make enormous progress. So they hope that they can be devoting all of their time to preparing for the C-ACDET-2506 Exam, but it is very obvious that a lot of people have not enough time to prepare for the important exam. Just like the old saying goes, the spirit is willing, but the flesh is weak.

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q14-Q19):

### NEW QUESTION # 14

While working on a customer project, the customer asks if specific details can be captured and made available in reporting for a sourcing project or contract that doesn't fit the standard fields. What is the recommended way to handle this scenario?

- A. Suggest the customer put a Word document on the template and capture all information in that document.
- B. Create a dynamic form (dform) where common data can be synced with the project header through customization.
- **C. Configure as many custom fields as possible for data capture purposes.**
- D. Create a Microsoft Form from the Actions menu for managing all the requirements.

**Answer: C**

Explanation:

The recommended approach is to configure custom fields for capturing non-standard data in sourcing projects or contracts. Custom fields allow structured data capture directly within SAP Ariba, which can then be fully included in reporting and analytics. Documents like Word files (A) are unstructured and not reportable. Dynamic forms synced with project headers (B) are not supported as standard functionality. External tools like Microsoft Forms (C) do not integrate with SAP Ariba's reporting capabilities. Custom fields can include picklists, validation rules, translations, and help tips, enabling flexible, maintainable data collection aligned with reporting and compliance needs.

### NEW QUESTION # 15

How can you set the order of your custom Contract Workspace fields? Note: There are 2 correct answers to this question.

- **A. Select Field Configuration, find the class, and select the Layout tab. Here you can drag and drop the order of the fields. Once all changes are performed, publish all changes via Customizing Publish.**
- **B. Navigate to the UI where the class is presented, select Customize in the banner, select Edit, and drag and drop the fields in the order they should be presented. Once all changes are performed, publish all changes via Customizing → Publish**
- C. The fields are presented in alphabetical order of the field label. By carefully choosing the

- D. Select Field Configuration and under the advanced tab select property Sequence. Fields are sorted by this field in the UL. Once all changes are performed, publish all changes via Customizing Publish.

**Answer: A,B**

#### NEW QUESTION # 16

A customer has requested that a Contracts field be added to an export event. After creating the field, assigning the appropriate check box in the advanced section, and publishing, this field still cannot be found in the export. What can be done to rectify this? Note: There are 2 correct answers to this question.

- A. The field must be accepted and published in the data definition.
- B. Custom fields cannot be added to import/exports.
- C. The data definition needs to be refreshed.
- D. A custom visibility expression needs to be added stating isVisibleInExport == true.

**Answer: A,C**

#### NEW QUESTION # 17

When you create a custom field, how do you define where the field is added?

- A. The field is added to a project header, identified by the templateClass ID
- B. The field is added to a class, identified by the record ID
- C. Each field can be linked to multiple screens, identified via UI GroupClass ID
- D. The field is added to a class, identified by a class name

**Answer: D**

Explanation:

In SAP Ariba, custom fields are associated with a specific class identified by its class name, such as ContractWorkspace or ProcureLineItem. This class-level association determines where the field is available within the application. When added to a parent class, the field inherits to all its subclasses, affecting all relevant data objects. The field is not linked via UI group IDs, project templates, or record IDs, which relate to different configuration aspects. This class-based design supports consistent data models and inheritance in SAP Ariba's architecture.

#### NEW QUESTION # 18

Which document outlines the roles and responsibilities for the SAP Deployment Lead assigned to your project?

- A. Inline Help
- B. Deployment Description
- C. Onboard Resource Center
- D. Partner Statement of Work

**Answer: B**

Explanation:

The Deployment Description document formally defines the scope, roles, and responsibilities of the SAP Deployment Lead within a specific SAP Ariba project. It provides clarity on tasks such as migration coordination, technical issue resolution, and stakeholder communication. Other documents like the Onboard Resource Center provide logistical support, the Partner Statement of Work focuses on partner deliverables, and Inline Help offers in-application guidance—not role definitions. The Deployment Description is the authoritative reference for deployment lead responsibilities.
