SC-900学習教材を練習した後、SC-900試験トレントから試験ポイントをマスターできます。その後、SC-900試験に合格するのに十分な自信があります。ひとつのことに努力すれば成功できます。安全な環境と効果的な製品については、SC-900テスト問題を試してみてください。決して失望させないでください。購入する前に、SC-900トレーニング資料の無料デモがあります。ご購入前に、SC-900ガイドの質問の質を早く知ることができます。

Microsoft Security Compliance and Identity Fundamentals 認定 SC-900 試験問題 (Q45-Q50):

質問 # 45

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Microsoft Defender for Endpoint can protect Android devices.	<input type="radio"/>	<input type="radio"/>
Microsoft Defender for Endpoint can protect Azure virtual machines that run Windows 10.	<input type="radio"/>	<input type="radio"/>
Microsoft Defender for Endpoint can protect Microsoft SharePoint Online sites and content from viruses.	<input type="radio"/>	<input type="radio"/>

正解:

解説:

Statements	Yes	No
Microsoft Defender for Endpoint can protect Android devices.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Defender for Endpoint can protect Azure virtual machines that run Windows 10.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Defender for Endpoint can protect Microsoft SharePoint Online sites and content from viruses.	<input type="radio"/>	<input checked="" type="radio"/>

Statements	Yes	No
Microsoft Defender for Endpoint can protect Android devices.	<input type="radio"/>	<input type="radio"/>
Microsoft Defender for Endpoint can protect Azure virtual machines that run Windows 10.	<input type="radio"/>	<input type="radio"/>
Microsoft Defender for Endpoint can protect Microsoft SharePoint Online sites and content from viruses.	<input type="radio"/>	<input type="radio"/>

質問 # 46

Select the answer that correctly completes the sentence.

正解:

解説:

Answer Area

When users attempt to access an application or a service, _____ controls their level of access.

Explanation:
authorization

In the context of Microsoft identity and access management, when users attempt to access an application or a service, authorization is what controls their level of access. This concept is clearly defined in Microsoft's Security, Compliance, and Identity (SCI) learning paths, particularly in SC-900 and SC-300 certifications.

From Microsoft SCI training materials:

"Authentication is the process of verifying the identity of a user, while authorization is the process of determining what resources a user can access and what actions they are permitted to perform." In more detail:

Authentication confirms who you are (e.g., verifying credentials through Azure AD, MFA).

Authorization decides what you can do (e.g., access to files, roles, permissions in an app or service).

SCI documentation explains:

"Once authentication is successful, authorization policies are applied to determine whether the authenticated user is allowed to access the requested resource and at what level." This principle is implemented using role-based access control (RBAC) in Microsoft Azure and Microsoft 365 environments. For example, even if a user successfully logs into the Microsoft 365 portal (authentication), their ability to manage Exchange Online settings or view compliance data depends on their assigned roles (authorization).

質問 # 47

Match the Microsoft Defender for Office 365 feature to the correct description.

To answer, drag the appropriate feature from the column on the left to its description on the right. Each feature may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Features

Threat Explorer

Threat Trackers

Anti-phishing protection

Answer Area

Feature Provides intelligence on prevailing cybersecurity issues

Feature Provides real-time reports to identify and analyze recent threats

Feature Detects impersonation attempts

正解:

解説:

Features

Threat Explorer

Threat Trackers

Anti-phishing protection

Answer Area

Anti-phishing protection Provides intelligence on prevailing cybersecurity issues

Threat Explorer Provides real-time reports to identify and analyze recent threats

Threat Trackers Detects impersonation attempts

Anti-phishing protection	Provides intelligence on prevailing cybersecurity issues
Threat Explorer	Provides real-time reports to identify and analyze recent threats
Threat Trackers	Detects impersonation attempts

質問 # 48

Select the answer that correctly completes the sentence.

<input type="checkbox"/> Azure Defender <input type="checkbox"/> The Microsoft 365 compliance center <input type="checkbox"/> The Microsoft 365 security center <input type="checkbox"/> Microsoft Endpoint Manager	provides a central location for managing information protection, information governance, and data loss prevention (DLP) policies.
--	---

正解:

解説:

<input type="checkbox"/> Azure Defender <input checked="" type="checkbox"/> The Microsoft 365 compliance center <input type="checkbox"/> The Microsoft 365 security center <input type="checkbox"/> Microsoft Endpoint Manager	provides a central location for managing information protection, information governance, and data loss prevention (DLP) policies.
---	---

Explanation:

Text Description automatically generated

<input type="checkbox"/> Azure Defender <input checked="" type="checkbox"/> The Microsoft 365 compliance center <input type="checkbox"/> The Microsoft 365 security center <input type="checkbox"/> Microsoft Endpoint Manager	provides a central location for managing information protection, information governance, and data loss prevention (DLP) policies.

質問 # 49

Select the answer that correctly completes the sentence.

Answer Area 

When users sign in, _____ verifies their credentials to prove their identity.

- authentication
- administration
- auditing
- authentication
- authorization

正解:

解説:

Answer Area 

When users sign in, _____ verifies their credentials to prove their identity.

- authentication
- administration
- auditing
- authentication
- authorization

Explanation:

In Microsoft identity terminology, authentication is the step that proves who the user is when they attempt to sign in. Microsoft Learn defines it plainly: "Authentication is the process of proving the identity of a user, device, or service." By contrast, "Authorization is the

process of determining what a user, device, or service can do." During sign-in to Microsoft Entra ID (formerly Azure AD), "the identity provider validates credentials and, upon successful authentication, issues tokens that applications use to grant access." Microsoft further explains the available methods: "Microsoft Entra ID supports multiple authentication methods, including passwords, multi-factor authentication, FIDO2 security keys, certificate-based authentication, and federated authentication." Auditing and administration are not the mechanisms that verify identity at sign-in. Auditing "records security- relevant events for investigation and compliance," while administration "refers to configuring and managing identities, access policies, and settings." Therefore, in the sentence "When users sign in, _____ verifies their credentials to prove their identity," the correct completion is authentication, because it is the control that validates the user's credentials and establishes identity before any authorization decisions are made.

Answer Area

When users sign in, verifies their credentials to prove their identity.

質問 # 50

.....

SC-900認定試験に関連する参考資料を提供できるサイトが多くあります。しかし、資料の品質が保証されることができません。それと同時に、あなたに試験に失敗すれば全額返金という保障を与えることもできません。普通の参考資料と比べて、Pass4TestのSC-900問題集は最も利用に値するツールです。Pass4Testの指導を元にして、あなたは試験の準備を十分にすることができます。しかも、楽に試験に合格することができます。IT領域でより大きな進歩を望むなら、SC-900認定試験を受験する必要があります。IT試験に順調に合格することを望むなら、Pass4TestのSC-900問題集を使用する必要があります。
