We all realize that how important an Locally-Managed Fireboxes certification is, also understand the importance of having a good knowledge of it. Passing the Network-Security-Essentials exam means you might get the chance of higher salary, greater social state and satisfying promotion chance. Once your professional ability is acknowledged by authority, you master the rapidly developing information technology. With so many advantages, why don't you choose our reliable Network-Security-Essentials Actual Exam guide, for broader future and better life? Our Network-Security-Essentials exam questions won't let you down.

If you are already determined to obtain an international certificate, you must immediately purchase our Network-Security-Essentials exam practice. Our products have been certified as the highest quality products in the industry. If you know Network-Security-Essentials Training Materials through acquaintance introduction, then you must also know the advantages of Network-Security-Essentials. We are both perfect on the quality and the price of the Network-Security-Essentials study braindumps.

## Valid Network-Security-Essentials Practice Questions - Network-Security-Essentials 100% Accuracy

If you do not choose a valid Network-Security-Essentials practice materials, you will certainly feel that your efforts and gains are not in direct proportion, which will lead to a decrease in self-confidence. You spent a lot of time, but the learning outcomes were bad. If you are facing these issues, then we suggest that you try our Network-Security-Essentials training prep, which have great quality and

they are efficient. Under the guidance of our Network-Security-Essentials learning materials, you can improve efficiency and save time. Because we can provide high-quality Network-Security-Essentials exam questions to help you pass the exam successfully.

## WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q44-Q49):

### NEW QUESTION # 44

In a Mobile VPN configuration, why would you choose default-route (full tunnel) VPN instead of split tunnel VPN? (Select one.)

- A. Default-route VPN is the only option you can use to apply security services to connections routed to your internal servers.
- **B. Default-route VPN enables your Firebox to examine all remote user traffic.**
- C. Default-route VPN uses less processing power.
- D. Default-route VPN automatically allows dynamic NAT.
- E. Default-route VPN uses less bandwidth.

**Answer: B**

Explanation:

In a Mobile VPN setup, a default-route (full tunnel) VPN routes all of a remote user's internet traffic through the VPN tunnel to the Firebox. This configuration allows the Firebox to inspect and apply security policies to all traffic, including traffic that is not destined for internal network resources. In contrast, a split tunnel VPN would route only traffic meant for the internal network through the VPN, while internet-bound traffic would bypass the Firebox, potentially exposing it to threats and limiting the Firebox's ability to inspect all traffic.

### NEW QUESTION # 45

Clients on the 10.0.10.0/24 network must connect to the server at 10.0.20.100. Based on this image, what static route must you add to the Firebox for traffic to reach the server? (Select one.)

- A. Route to 10.0.20.0/24, Gateway 10.0.2.1
- **B. Route to 10.0.20.0/24, Gateway 10.0.2.254**
- C. Route to 10.0.20.0/24, Gateway 10.0.2.254
- D. Route to 10.0.2.0/24, Gateway 10.0.2.1
- E. Route to 10.0.10.0/24, Gateway 10.0.0.1

**Answer: B**

Explanation:

In this network configuration:

\* The Firebox needs a static route to direct traffic intended for the 10.0.20.0/24 network (where the server 10.0.20.100 resides).

\* The gateway address that allows the Firebox to reach the 10.0.20.0/24 network is 10.0.2.254, which is the router's IP address on the 10.0.2.0/24 network.

By configuring a static route:

\* Destination: 10.0.20.0/24

\* Gateway: 10.0.2.254

This route instructs the Firebox to send traffic destined for the 10.0.20.0/24 network via the router at 10.0.2.254, enabling clients in the 10.0.10.0/24 network to reach the server.

\* Option B is correct because it provides the correct destination and gateway for traffic to the 10.0.20.0/24 network.

\* Option A incorrectly sets the route to 10.0.10.0/24, which doesn't address the server network.

\* Options C and D set incorrect gateways (10.0.2.1), which do not route traffic correctly in this setup.

\* Option E is a duplicate of B and would also be correct; thus, B and E are equivalent.

### NEW QUESTION # 46

Match each WatchGuard Subscription Service with its function.

□

**Answer:**

Explanation:

Explanation:

Here is the correct match for each WatchGuard Subscription Service and its function:

- \* A cloud-based service that uses emulation analysis to identify characteristics and behavior of malware : APT Blocker
- \* Uses artificial intelligence scanning on files to detect malicious software : IntelligentAV
- \* Uses signature-based file scanning to detect malicious software through Firebox proxy policies : Gateway AntiVirus
- \* Uses signatures to provide real-time protection against known software vulnerabilities : Intrusion Prevention Service
- \* Uses signatures to monitor and control use of applications on your network : Application Control
- \* Controls access to websites based on content categories : WebBlocker

APT Blocker is a cloud-based, advanced threat detection service that performs behavioral analysis in a sandbox environment to identify sophisticated malware.

It focuses on identifying advanced persistent threats (APT) by observing their behavior in a controlled setting.

IntelligentAV leverages artificial intelligence to perform deep scanning and analysis of files to detect malware using predictive modeling techniques. This provides proactive protection by identifying previously unknown threats.

Gateway AntiVirus relies on a signature-based detection mechanism to identify malware in real-time. It is used within Firebox's proxy policies to scan file transfers, ensuring files containing known malware are blocked.

Intrusion Prevention Service (IPS) scans network traffic against a database of known vulnerabilities to detect and prevent exploitation attempts in real time. It protects against network-based attacks targeting known vulnerabilities.

Application Control helps in monitoring, managing, and enforcing the use of applications across the network using a signature-based approach. It provides visibility and control over applications to enhance productivity and security.

WebBlocker is a content filtering service that restricts access to websites based on their content categories. It helps enforce web usage policies and block access to inappropriate or harmful content.

#### NEW QUESTION # 47

In Firebox System Manager, where can you perform each of these tasks?

**Answer:**

Explanation:

Explanation:

Here are the correct answers based on the Firebox System Manager interface functions:

- \* See the routing table and interface statistics  
answer: Firebox System Manager - Status Report  
Explanation: The Status Report section in Firebox System Manager includes information on network routing and interface statistics, providing insights into network paths and interface performance.
  - \* See a list of users connected to the Firebox  
answer: Firebox System Manager - Authentication List  
Explanation: The Authentication List displays all active user sessions connected to the Firebox, showing authenticated users and their session details.
  - \* Learn the status of your IPS signature database  
answer: Firebox System Manager - Subscription Services  
Explanation: Subscription Services in FSM gives information on the status of services like IPS, showing the update status and version of the signature database.
  - \* Ping the source of a denied packet  
answer: Firebox System Manager - Traffic Monitor  
Explanation: The Traffic Monitor tool allows administrators to track packet details and offers functionality to ping sources directly, aiding in network troubleshooting.
  - \* Block all traffic for an IP address  
answer: Firebox System Manager - Blocked Sites List  
Explanation: The Blocked Sites List feature in FSM lets administrators add IP addresses to a blacklist, blocking all incoming and outgoing traffic for specified addresses.
- These answers utilize standard Firebox management features for performing administrative and diagnostic tasks efficiently. Let me know if you need further assistance with Firebox System Manager capabilities.

#### NEW QUESTION # 48

Your network was the target of an attack last week. You want to learn more about the source of the attack.

What monitoring tools can you use to get started? (Select one.)

- A. Discovery in Fireware Web UI
- B. FireWatch in Fireware Web UI
- C. WatchGuard Log Catalog
- D. Traffic Monitor in Firebox System Manager
- E. Log Search and reports in WatchGuard Cloud or Dimension

**Answer: E**

Explanation:

To investigate an attack and learn more about the source, Log Search and reports in WatchGuard Cloud or Dimension offer detailed logs and analytical reports. These tools provide historical data, allowing you to review traffic, pinpoint the source of the attack, and analyze patterns.

While other tools like Traffic Monitor or FireWatch offer real-time monitoring, they do not provide the in-depth historical analysis and reporting features required for post-incident investigation.

## NEW QUESTION # 49

.....

Our Network-Security-Essentials learning materials are perfect paragon in this industry full of elucidating content for exam candidates of various degree to use for reference. We are dominant for the efficiency and accuracy of our Network-Security-Essentials actual exam. As leader and innovator, we will continue our exemplary role. And we will never too proud to do better in this career to develop the quality of our Network-Security-Essentials Study Dumps to be the latest and valid.

**Valid Network-Security-Essentials Practice Questions:** <https://www.verifieddumps.com/Network-Security-Essentials-valid-exam-braindumps.html>

Our Network-Security-Essentials test guide materials are being well known all these years for their well-recognized quality which can guarantee the efficiency 100 percent, WatchGuard Network-Security-Essentials Related Content You don't need to worry about network problems either, WatchGuard Network-Security-Essentials Related Content It is quietly rare probability event, We guarantee our test prep can help you pass Network-Security-Essentials exams surely.

For most Windows Vista users, Media Center is unknown territory, boolean hasPointerEvents( method, Our Network-Security-Essentials Test Guide materials are being well known all these years Network-Security-Essentials for their well-recognized quality which can guarantee the efficiency 100 percent.
