You are welcome to download the free demos to have a general idea about our NetSec-Analyst training materials.

Palo Alto Networks NetSec-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshooting: This section of the exam measures the skills of Technical Support Analysts and covers the identification and resolution of configuration and operational issues. It includes troubleshooting misconfigurations, runtime errors, commit and push issues, device health concerns, and resource usage problems. This domain ensures candidates can analyze failures across management systems and on-device functions, enabling them to maintain a stable and reliable security infrastructure.
Topic 2	• Object Configuration Creation and Application: This section of the exam measures the skills of Network Security Analysts and covers the creation, configuration, and application of objects used across security environments. It focuses on building and applying various security profiles, decryption profiles, custom objects, external dynamic lists, and log forwarding profiles. Candidates are expected to understand how data security, IoT security, DoS protection, and SD-WAN profiles integrate into firewall operations. The objective of this domain is to ensure analysts can configure the foundational elements required to protect and optimize network security using Strata Cloud Manager.

Topic 3	• Management and Operations: This section of the exam measures the skills of Security Operations Professionals and covers the use of centralized management tools to maintain and monitor firewall environments. It focuses on Strata Cloud Manager, folders, snippets, automations, variables, and logging services. Candidates are also tested on using Command Center, Activity Insights, Policy Optimizer, Log Viewer, and incident-handling tools to analyze security data and improve the organization overall security posture. The goal is to validate competence in managing day-to-day firewall operations and responding to alerts effectively.
Topic 4	• Policy Creation and Application: This section of the exam measures the abilities of Firewall Administrators and focuses on creating and applying different types of policies essential to secure and manage traffic. The domain includes security policies incorporating App-ID, User-ID, and Content-ID, as well as NAT, decryption, application override, and policy-based forwarding policies. It also covers SD-WAN routing and SLA policies that influence how traffic flows across distributed environments. The section ensures professionals can design and implement policy structures that support secure, efficient network operations.

Palo Alto Networks Network Security Analyst Sample Questions (Q237-Q242):

NEW QUESTION # 237
Which statement is true regarding a Prevention Posture Assessment?

- A. The Security Policy Adoption Heatmap component filters the information by device groups, serial numbers, zones, areas of architecture, and other categories
- B. It performs over 200 security checks on Panorama/firewall for the assessment
- C. It provides a set of questionnaires that help uncover security risk prevention gaps across all areas of network and security architecture
- D. It provides a percentage of adoption for each assessment area

Answer: C

NEW QUESTION # 238
Where within the URL Filtering security profile must a user configure the action to prevent credential submissions?

- A. URL Filtering > URL Filtering Settings
- B. URL Filtering > Inline Categorization
- C. URL Filtering > Categories
- D. URL Filtering > HTTP Header Insertion

Answer: C

Explanation:
URL filtering technology protects users from web-based threats by providing granular control over user access and interaction with content on the Internet. You can develop a URL filtering policy that limits access to sites based on URL categories, users, and groups. For example, you can block access to sites known to host malware and prevent end users from entering corporate credentials to sites in certain categories.

NEW QUESTION # 239
In the example security policy shown, which two websites fcked? (Choose two.)
□

- A. LinkedIn
- B. YouTube
- C. Facebook
- D. Amazon

Answer: A,C

NEW QUESTION # 240

Based on the image provided, which two statements apply to the Security policy rules? (Choose two.)

- A. The Allow-Social-Media rule allows all Facebook functions.
- B. The Allow-Office-Programs rule is using an application filter.
- C. The Allow-Office-Programs rule is using an application group.
- D. In the Allow-FTP policy, FTP is allowed using App-ID.

Answer: A,B

NEW QUESTION # 241

Based on the screenshot what is the purpose of the included groups?

- A. They contain only the users you allow to manage the firewall.
- B. They are groups that are imported from RADIUS authentication servers.
- C. They are used to map usernames to group names.
- D. They are only groups visible based on the firewall's credentials.

Answer: C
