Oracle 1Z0-1126-1 Exam Syllabus Topics:

Topic	Details
Topic 1	Introduction to OGL Content: OGL plays a crucial role in enabling organizations to efficiently manage learning content, ensuring seamless deployment and accessibility. It provides a structured framework for organizing, delivering, and tracking learning materials to enhance workforce skills. The OGL Deployment approach outlines a structured implementation process that organizations follow to integrate OGL within their systems. Organizations nest within this deployment approach by aligning their training objectives, resources, and processes with OGL's capabilities, ensuring a smooth adoption and effective utilization of learning content.
Topic 2	Continuous Improvement: Mature: Ongoing refinement is essential for maintaining the effectiveness of OGL content. Organizations plan for quarterly updates, refreshes, and necessary changes to keep learning materials relevant and up to date. Reviewing OGL analytics provides valuable insights into content performance, enabling continuous optimization and improvement. This phase ensures that the learning framework remains dynamic and aligned with evolving business needs, maximizing the long-term impact of OGL deployment.

Topic 3	Project Phase 2: Refine: At this stage, organizations refine their project scope, estimate timelines, and ensure alignment with strategic objectives. Selecting appropriate OGL content from libraries helps tailor learning materials to organizational needs. Deployment considerations, including defining the environment, test users, and data requirements, ensure a robust testing phase before full implementation. The process of building, testing, and customizing OGL content is refined to optimize effectiveness. Planning for optional activities, such as activation and role conditions or display groups, ensures flexibility and adaptability in deployment.
Topic 4	Project Phase 1: Focus: This phase involves defining the OGL project plan, including governance structures that oversee implementation and ensure alignment with business objectives. OGL training, learning paths, and business processes play a vital role in equipping users with the necessary skills and knowledge for efficient adoption. Identifying essential resources, including key team members, lays the foundation for a successful rollout. OGL Cloud Service activation is a critical step, allowing organizations to manage users within the OGL console, ensuring secure and streamlined access. Proper documentation is essential for content building, testing, and customization, forming the basis for a structured and scalable deployment.
Topic 5	Project Phase 3: Enable: This phase focuses on finalizing resources, documentation, and deadlines for implementation sign-off. Deploying content to production is a crucial step, marking the transition from testing to live usage. Go-live support and hypercare processes are put in place to ensure a smooth transition, providing immediate assistance and troubleshooting to address any issues. This stage ensures that the OGL deployment is stable and fully functional, ready to deliver value to the organization.

Oracle Guided Learning Project Management Foundations Associate - Rel 1 Sample Questions (Q69-Q74):

NEW QUESTION # 69

Base item testing, customization, and final review and sign-off are the three steps in preparing what type of content?

- A. Base content
- B. New content
- C. Customized content
- D. Oracle Content

Answer: C

Explanation:

Customized content involves testing base items, tailoring them, and obtaining final approval, distinguishing it from new content (option A), Oracle Content (option B), or unchanged Base content (option C).

NEW QUESTION # 70

Which activity might be included in an effective Hypercare strategy?

- A. Do not designate change champions.
- B. Hide resources that might help end users.
- C. Provide a clear base of operations for escalations.

Answer: C

Explanation:

Hypercare is the post-go-live support phase in OGL projects, aimed at stabilizing the system and addressing user issues swiftly. Providing a clear base of operations for escalations (option B) establishes a structured process for handling problems, ensuring support teams can respond effectively—a hallmark of an effective Hypercare strategy. Hiding resources (option A) contradicts support goals, and not designating change champions (option C) weakens advocacy and adoption, both being poor practices. Option B's focus on escalation clarity enhances user confidence and system reliability, making it the strategic choice for Hypercare success.

NEW QUESTION # 71

Which events could impact the importing and customizing of Base Guide content?

- A. Fusion quarterly releases, environment refresh schedules, and OGL testing window
- B. Change management strategy, cloud implementation plan, and training needs analysis
- C. Planning for application role mapping, display groups, and translations

Answer: A

Explanation:

Events like Fusion quarterly releases, environment refresh schedules, and the OGL testing window (option A) directly impact importing and customizing Base Guide content by altering application functionality, data states, or testing availability. These technical events can necessitate content updates or delay customization efforts. Option B involves planning activities, not events, while option C addresses broader strategies, not specific impacts on Base Guides. Option A's focus on external, time-bound factors highlights their critical influence on maintaining content accuracy and relevance during development.

NEW QUESTION # 72

Which "fake" users are required to test OGL content?

- A. Application trainers, change managers, and host application end users
- B. At least one member of the baseline team, a transaction initiator, and an approver
- C. Several OGL content developers, system administrators, and tech leads

Answer: B

Explanation:

Testing OGL content requires "dummy" users representing key roles: a baseline team member, a transaction initiator, and an approver. These roles simulate real-world workflows. Options A and C include non-essential or real-user roles not specific to testing requirements.

NEW QUESTION # 73

What are recommended agenda items for the OGL kickoff?

- A. Get an overview of the OGL cloud service and implementation process, identify key roles and responsibilities, and review the training plan and digital learning assignments.
- B. Start developing content, deploy OGL in production, and define Hypercare solutions
- C. Focus on business outcomes, leverage best practices, and continuously improve.

Answer: A

Explanation:

The OGL kickoff agenda typically includes an overview of the cloud service and implementation process, identifying roles and responsibilities, and reviewing the training plan. These set the foundation for the project. Option A involves later-stage activities, and option C is too vague for a kickoff focus.
