最高のSalesforce Analytics-Arch-201日本語 & 合格スムーズAnalytics-Arch-201最新資料 | 素晴らしいAnalytics-Arch-201受験資料更新版

当社Salesforceでは、多くの分野の専門家を雇用してAnalytics-Arch-201学習ガイドを作成しているため、学習教材の品質を安心してご利用いただけます。さらに、Analytics-Arch-201試験問題のガイダンスに基づいて試験の準備をすることで、Topexam近い将来昇進する機会を増やし、給与を引き上げることができます。したがって、Salesforce Certified Tableau Architect試験を受ける準備ができたなら、Analytics-Arch-201学習教材を利用できます。次の受益者になりたい場合、何を待っていますか？ Analytics-Arch-201学習教材を購入してください。

Salesforce Analytics-Arch-201 認定試験の出題範囲:

トピック	出題範囲

トピック 1	<ul style="list-style-type: none"> • Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
トピック 2	<ul style="list-style-type: none"> • Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
トピック 3	<ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Salesforce Certified Tableau Architect 認定 Analytics-Arch-201 試験問題 (Q106-Q111):

質問 # 106

When managing a Tableau Server environment on a Linux system, which method is recommended for deploying automated backup scripts?

- A. Using cron jobs to schedule and execute backup scripts at regular intervals
- B. Configuring the scripts to run automatically via the Tableau Server web interface
- C. Manually initiating backup scripts through the Linux terminal as needed
- D. Relying on a third-party cloud service to handle all backup processes

正解: A

解説:

Using cron jobs to schedule and execute backup scripts at regular intervals On a Linux system, cron jobs are the recommended method for deploying automated backup scripts for Tableau Server. Cron allows for the precise scheduling of scripts to run at regular intervals, ensuring consistent and automated backups without the need for manual initiation. Option A is incorrect because the Tableau Server web interface does not provide a mechanism for automating server-level scripts like backups. Option C is incorrect as relying solely on a third-party cloud service for back-ups does not address the need for local script automation and management. Option D is incorrect because manual initiation is not efficient for regular maintenance tasks like backups.

質問 # 107

How does the Tableau Server Resource Monitoring Tool contribute to the observability of a Tableau Server environment in terms of system resource usage?

- A. It tracks changes in workbook and dashboard designs to assess their impact on performance
- B. It offers insights into server resource utilization, such as CPU, memory, and disk usage
- C. It monitors network bandwidth usage between the Tableau Server and client applications
- D. It provides real-time alerts for any changes in user permissions and security settings

正解: B

解説:

It offers insights into server resource utilization, such as CPU, memory, and disk usage. The Tableau Server Resource Monitoring Tool is instrumental in providing observability into system resource usage. It offers detailed insights into how the server utilizes resources like CPU, memory, and disk space, allowing administrators to identify potential bottlenecks and optimize server performance accordingly. Option A is incorrect because the Resource Monitoring Tool focuses on system resources, not on monitoring changes in permissions and security settings. Option C is incorrect as the tool is designed to monitor server resource usage, not to track design changes in workbooks and dashboards. Option D is incorrect because it primarily monitors server resource utilization, not network bandwidth usage between the server and clients.

質問 # 108

When planning to implement automated user provisioning for Tableau Cloud, how can the System for Cross-Domain Identity Management (SCIM) be effectively utilized?

- A. Integrating SCIM with the organization's identity provider to automate the process of creating, updating, and deactivating user accounts in Tableau Cloud
- B. Configuring SCIM to allow users to self-provision their accounts directly in Tableau Cloud
- C. Using SCIM exclusively for periodic audits of user accounts rather than for ongoing user account management
- **D. By manually updating user roles in Tableau Cloud whenever there are changes in the organization's identity management system**

正解: D

解説:

Integrating SCIM with the organization's identity provider to automate the process of creating, updating, and deactivating user accounts in Tableau Cloud Utilizing SCIM in conjunction with the organization's identity provider allows for the automation of user account management in Tableau Cloud. This integration can automatically create, update, and deactivate user accounts based on changes in the organization's identity management system, ensuring that user access in Tableau Cloud remains current and secure. Option A is incorrect because manually updating user roles is not an efficient use of SCIM's capabilities for automation. Option C is incorrect as SCIM is designed for ongoing user account management, not just for periodic audits. Option D is incorrect because SCIM integration is typically managed by administrators or the IT department, not by allowing users to self-provision accounts.

質問 # 109

In a Tableau environment utilizing both Tableau Server and Tableau Cloud, what consideration is important when choosing an authentication method?

- **A. Ensuring the method allows for the synchronization of user roles and permissions between Tableau Server and Tableau Cloud**
- B. It should support automatic user provisioning in both Tableau Server and Tableau Cloud
- C. The authentication method must allow for different user permissions in Tableau Server and Tableau Cloud
- D. The method must be compatible with Tableau Server's version regardless of its compatibility with Tableau Cloud

正解: A

解説:

Ensuring the method allows for the synchronization of user roles and permissions between Tableau Server and Tableau Cloud When choosing an authentication method for a Tableau environment that includes both Tableau Server and Tableau Cloud, it is important to ensure that the method allows for synchronization of user roles and permissions between the two platforms. This synchronization is key to maintaining consistent access control and user management across both environments. Option A is incorrect because the requirement for different user permissions in Tableau Server and Tableau Cloud is not a standard consideration for authentication methods. Option B is incorrect as automatic user provisioning is beneficial but not a primary consideration for choosing an authentication method in mixed environments. Option C is incorrect because compatibility with both Tableau Server and Tableau Cloud is important, not just with the version of Tableau Server.

質問 # 110

When configuring the Metadata API in Tableau Server, which step is crucial for ensuring the API's effective performance and

security?

- A. Regularly changing the API key to prevent unauthorized access
- B. Encrypting all Metadata API responses with an additional encryption layer
- C. Configuring the Metadata API to run on a separate server from the main Tableau Server
- **D. Setting up rate limits to control the number of requests to the Metadata API**

正解: D

解説:

Setting up rate limits to control the number of requests to the Metadata API Setting up rate limits for the Metadata API is essential to manage the load on the Tableau Server and to prevent abuse of the API. Rate limiting helps to maintain the server's performance and stability by controlling the number and frequency of requests processed by the Metadata API. Option A is incorrect because regularly changing the API key, while a good security practice, is not specifically related to the performance and security of the Metadata API in operation. Option C is incorrect as running the Metadata API on a separate server is not a standard requirement and does not directly contribute to its effective performance. Option D is incorrect because adding an extra encryption layer to Metadata API responses is generally unnecessary and can add undue complexity, as the API should already operate under secure protocols.

質問 # 111

.....

主要な環境では、人々はより多くの仕事のプレッシャーに直面しています。そのため、彼らはSalesforce認証を一般の群れよりも高めたいと考えています。有効で効率的なAnalytics-Arch-201ガイドトレントを選択する方法は、ほとんどの候補者が懸念する可能性のある重要なトピックです。だから今、それは正しいです、あなたは私たちのところに來ます。当社は、特にSalesforce認定試験に関するこの分野の高品質なAnalytics-Arch-201試験問題で有名です。試験のためにAnalytics-Arch-201学習教材を実践している数千人の受験者に受け入れられています。
