Wenn Sie VMware 2V0-13.25 Zertifizierungsprüfung ablegen, ist es nötig für Sie, die richtigen VMware 2V0-13.25 Prüfungsunterlagen zu benutzen. Wenn Sie irgendwo die Unterlagen suchen, stoppen Sie jetzt bitte. Wenn Sie keine richtigen Unterlagen haben, probieren Sie bitte VMware 2V0-13.25 Dumps von ZertFragen. Die Hitrate der Dumps ist so hoch, dass sie Ihnen den einmaligen Erfolg garantieren. Im Vergleich zu anderen Prüfungsunterlagen können diese Dumps die Prüfungsinhalte ganz richtig greifen. Damit können Sie Ihre Lerneffektivität erhöhen und sich besser auf VMware 2V0-13.25 Zertifizierungsprüfung vorbereiten.

VMware 2V0-13.25 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.

Thema 2	<ul style="list-style-type: none"> Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
Thema 3	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.
Thema 4	<ul style="list-style-type: none"> VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.
Thema 5	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.

2V0-13.25 Mit Hilfe von uns können Sie bedeutendes Zertifikat der 2V0-13.25 einfach erhalten!

Wir ZertFragen bietet Ihnen die Prüfungsfragen und Antworten zur VMware 2V0-13.25 von höchster Qualität, damit Sie viel näher von Ihrem Erfolg sind. Wenn Sie noch ein paar Sorgen haben, können Sie die 2V0-13.25 Demo durch die Webseite ZertFragen herunterladen. Hier versprechen wir Ihnen, dass wir Ihnen noch einjähriger Aktualisierung kostenlos anbieten werden, nachdem Sie die Prüfungsfragen und Antworten zur VMware 2V0-13.25 gekauft haben.

VMware Cloud Foundation 9.0 Architect 2V0-13.25 Prüfungsfragen mit Lösungen (Q52-Q57):

52. Frage

A customer is deploying VMware Cloud Foundation (VCF) in an enterprise environment. During a series of workshops with stakeholders, the following requirements were identified:

- * The network solution must be capable of complete logical isolation.
- * The network solution must be capable of supporting independent upgrade cycles for network stacks.
- * The network solution must be capable of tenant-specific customization of NSX configurations.

The architect has made the following design decisions:

- * The solution will consist of a single VCF instance.
- * The solution will include a management domain and two workload domains.

Based on the scenario, which additional design decision meets all of the stated requirements?

- A. Use a shared NSX instance across both workload domains.
- B. Use a global NSX Federation configuration across workload domains.
- C. Deploy a dedicated NSX instance per workload domain.
- D. Deploy NSX only in the management domain and use VLAN-backed segments in the workload domains.

Antwort: C

Begründung:

Dedicated NSX instances per workload domain provide the highest level of logical isolation and allow independent upgrade cycles, fulfilling the requirement of tenant-specific customization. Each workload domain with its own NSX instance can be managed separately, updated independently, and configured with its own security policies, BGP/VRF, segments, and gateways.

NSX Federation could achieve some level of centralization but does not support independent upgrade cycles per domain. A shared NSX instance breaks isolation and would tightly couple upgrade cycles, violating two of the key stated requirements.

53. Frage

Which Broadcom solutions help increase storage performance for VMware environments?

- A. Fibre Channel HBA
- **B. Broadcom RAID Controller**
- C. vSAN
- **D. Broadcom NVMe SSD**

Antwort: B,C,D

Begründung:

Broadcom NVMe SSDs, RAID Controllers, and vSAN are essential for improving storage performance in VMware environments.

54. Frage

Which Broadcom components are needed for VMware disaster recovery solutions?

- **A. vSphere HA**
- B. Fibre Channel HBA
- **C. Broadcom RAID Controller**
- **D. vSAN**

Antwort: A,C,D

Begründung:

RAID controllers, vSphere HA, and vSAN are essential components of VMware disaster recovery solutions.

55. Frage

As a VMware Cloud Foundation architect, you are provided with the following requirements:

All administrative access to the cloud management components must be trusted.

All cloud management components' communications must be encrypted.

Enhancement of lifecycle management should always be considered.

Which design decision fulfills the requirements?

- A. Write an Aria Orchestrator Workflow to change the ESXi hosts' certificates in bulk.
- B. Integrate the SDDC Manager with the vCenter Server in VMCA mode.
- C. Write a PowerCLI script to run on all virtual appliances and force a redirection on port 443.
- **D. Integrate the SDDC Manager with a supported 3rd-party certificate authority (CA).**

Antwort: D

Begründung:

The requirements focus on trust, encryption, and lifecycle management for a VMware Cloud Foundation (VCF) 5.2 solution. VCF leverages SDDC Manager, vCenter Server, NSX, and ESXi hosts as core management components, and their security and manageability are critical.

Let's evaluate each option against the requirements:

Option A: Integrate the SDDC Manager with a supported 3rd-party certificate authority (CA) This is the correct answer. In VCF 5.2, integrating SDDC Manager with a 3rd-party CA (e.g., Microsoft CA, OpenSSL) allows it to manage and deploy trusted

certificates across all management components (e.g., vCenter, NSX Manager, ESXi hosts).

This ensures:

Trusted administrative access: Certificates from a trusted CA secure administrative interfaces (e.g., HTTPS access to SDDC Manager and vCenter), ensuring authenticated and verified connections.

Encrypted communications: All management component interactions (e.g., API calls, UI access) use TLS with CA-signed certificates, encrypting data in transit.

Lifecycle management enhancement: SDDC Manager automates certificate lifecycle operations (e.g., issuance, renewal, replacement), reducing manual effort and improving operational efficiency.

The VMware Cloud Foundation documentation explicitly supports this integration as a best practice for security and scalability, fulfilling all three requirements comprehensively.

Option B: Integrate the SDDC Manager with the vCenter Server in VMCA mode This is incorrect. The vCenter Server's VMware Certificate Authority (VMCA) can issue certificates for vSphere components (e.g., ESXi hosts, vCenter itself), but it operates within the vSphere domain, not across the broader VCF stack. SDDC Manager requires a higher-level CA integration to manage certificates for all components (including NSX and itself). VMCA mode doesn't extend trust to SDDC Manager or NSX Manager natively, nor does it enhance lifecycle management across the entire VCF solution-it's limited to vSphere. This option fails to fully address the requirements.

Option C: Write a PowerCLI script to run on all virtual appliances and force a redirection on port 443 This is incorrect. Forcing redirection to port 443 (HTTPS) via a PowerCLI script might enable encrypted communication for some components, but it's a manual, ad-hoc solution that:

Doesn't ensure trusted access (no mention of certificate trust).

Doesn't integrate with a CA for certificate management.

Contradicts lifecycle enhancement, as it requires ongoing manual intervention rather than automation.

This approach is not scalable or supported in VCF 5.2 for meeting security requirements.

Option D: Write an Aria Orchestrator Workflow to change the ESXi hosts' certificates in bulk This is incorrect. While VMware Aria Orchestrator (formerly vRealize Orchestrator) can automate certificate updates for ESXi hosts, it's a partial solution that:

Only addresses ESXi hosts, not all management components (e.g., SDDC Manager, NSX).

Doesn't inherently ensure trust unless tied to a trusted CA (not specified here).

Improves lifecycle management only for ESXi certificates, not the broader VCF stack.

This option lacks the holistic scope required by the question and isn't a native VCF design decision.

Conclusion:

Integrating SDDC Manager with a 3rd-party CA (Option A) is the only design decision that fully satisfies all requirements. It leverages VCF 5.2's built-in certificate management capabilities to ensure trust, encryption, and lifecycle efficiency across the entire solution.

56. Frage

Which Broadcom products support optimal data throughput in VMware virtualized environments?

- A. Broadcom RAID Controller
- B. vSAN
- C. Broadcom 25GbE Ethernet Adapter
- D. VMware NSX

Antwort: A,B,C

Begründung:

Broadcom 25GbE Ethernet Adapters, vSAN, and Broadcom RAID Controllers support optimal data throughput in VMware environments.

57. Frage

.....

Heutzutage, wo es viele Exzellente gibt, ist es die beste Überlebensmethode, Ihre eigene Position zu festigen. Aber es ist doch nicht so einfach. Während die anderen sich bemühen, ihre Berufsfähigkeiten durch die VMware 2V0-13.25 (VMware Cloud Foundation 9.0 Architect) Zertifizierungsprüfung zu verbessern, machen Sie keinen Fortschritt und nehmen die Dinge einfach so, wie sie sind. Dann werden Sie eliminiert. Um Ihre Position zu festigen, sollen Sie Ihre Berufsfähigkeiten auch durch die VMware 2V0-13.25

(VMware Cloud Foundation 9.0 Architect) Zertifizierungsprüfung verbessern und Fortschritt mit den anderen halten. In diesem Mail stehen Sie nicht weit hinter den anderen.
