

2026 Analytics-Admn-201 Valid Exam Prep | Newest 100% Free Salesforce Certified Tableau Server Administrator Valid Test Bootcamp

As we have become the leader in this career and our experts have been studying the Analytics-Admn-201 exam braindumps for many years and know every detail about this subject. So our Analytics-Admn-201 simulating exam is definitely making your review more durable. To add up your interests and simplify some difficult points, our experts try their best to design our Analytics-Admn-201 Study Material and help you understand the learning guide better.

We provide you with two kinds of consulting channels if you are confused about some questions on our Analytics-Admn-201 study materials. You can email us or contact our online customer service. We will reply you as soon as possible. You are free to ask questions about Analytics-Admn-201 training prep at any time since that we are working 24/7 online. Our staff is really very patient and friendly. They are waiting to give you the most professional suggestions on our Analytics-Admn-201 exam questions.

>> Analytics-Admn-201 Valid Exam Prep <<

TOP Analytics-Admn-201 Valid Exam Prep 100% Pass | The Best Salesforce Salesforce Certified Tableau Server Administrator Valid Test Bootcamp Pass for sure

One of the advantages of taking the ITCertMagic Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice exam (desktop and web-based) is that it helps applicants to focus on their weak areas. It also helps applicants to track their progress and make improvements. Salesforce Analytics-Admn-201 Practice Exams are particularly helpful in identifying areas where one needs more practice.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 2	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 3	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 4	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 5	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Salesforce Certified Tableau Server Administrator Sample Questions (Q40-Q45):

NEW QUESTION # 40

When you use trusted tickets in Tableau Server, users can:

- A. Embed database credentials
- B. Save and edit workbooks
- C. Access embedded views without being prompted for credentials
- D. Encrypt database connections

Answer: C

Explanation:

Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:

* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.

* Tableau Server issues a temporary ticket (a unique string).

* The ticket is embedded in a view URL (e.g., /trusted/<ticket>/views/...), granting access to the view for a short period (configurable, default 5 minutes).

* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior

for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.

* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.

* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions-those depend on the user's site role and permissions.

* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases-database credentials are managed separately in the data source.

Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

Reference: Tableau Server Documentation - "Trusted Authentication" (https://help.tableau.com/current/server/en-us/trusted_auth.htm).

NEW QUESTION # 41

You have a server that contains 16 processor cores. What is the default number of VizQL instances configured by the installer?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

The VizQL Server process in Tableau Server handles rendering visualizations and processing queries for users viewing dashboards or workbooks. During installation, Tableau Server automatically configures the number of VizQL instances based on the number of processor cores on the machine, following this rule:

Default VizQL instances = 2 per node, unless manually adjusted post-installation.

In multi-node setups, additional instances may be added based on core count, but the question specifies a single server with 16 cores.

The installer does not scale VizQL instances linearly with core count by default (e.g., it doesn't set 1 instance per 4 cores). Instead: For a single-node installation, the default is 2 VizQL instances, regardless of core count (assuming the minimum hardware requirements are met: 8 cores, 32 GB RAM).

Administrators can later adjust this using TSM (e.g., tsm topology set-process) based on performance needs, but the question asks for the default configured by the installer.

Option A (4): Incorrect. Four instances might be configured manually for a 16-core server, but it's not the default.

Option B (6): Incorrect. Six instances exceed the default for a single node.

Option C (10): Incorrect. Ten instances are far beyond the default and would require manual configuration.

Option D (2): Correct. The installer sets 2 VizQL instances by default on a single-node installation.

Reference: Tableau Server Documentation - "Server Process Settings" (<https://help.tableau.com/current/server/en-us/processes.htm>).

NEW QUESTION # 42

You activate the same Tableau Server product key on three installations for Dev, Test, and Production. You plan to move the Test environment to new hardware. What is the recommended workflow for managing the product key?

- A. Install and activate Tableau Server on the new hardware and keep the existing Test environment as a backup
- B. Install and activate Tableau Server on the new hardware, and then run the following script in the old environment: tableau-server-obliterate.cmd -y -y -y
- C. Install and activate Tableau Server on the new hardware, and then deactivate it on the old hardware
- D. **Deactivate the product key on the existing Test environment, and then install and activate Tableau Server on the new hardware**

Answer: D

Explanation:

Tableau Server's licensing ties product keys to specific machines. Moving an environment requires managing activations to stay compliant. Let's break this down:

* Licensing Rules:

* A product key can be activated on multiple machines (e.g., Dev, Test, Prod), but only up to the licensed limit (typically 3 for such setups).

- * Deactivation frees the key for reuse elsewhere.
- * Recommended Workflow:
 - * Deactivate first: Use tsm licenses deactivate on the old Test machine to release the key.
 - * Then activate: Install on the new hardware and activate with tsm licenses activate -k <key>.
 - * Why: Ensures compliance and avoids activation conflicts (e.g., exceeding the key's limit).
 - * Option B (Deactivate on Test, then install/activate on new hardware): Correct.
- * Steps:
 - * On old Test: tsm licenses deactivate.
 - * Install Tableau Server on new hardware.
 - * On new Test: tsm licenses activate -k <key>.
 - * Benefit: Clean, compliant transfer-preserves license integrity.
 - * Option A (Activate new, then deactivate old): Incorrect.
 - * Risk: If the key's limit is reached (e.g., 3 activations), the new activation fails until deactivation occurs. Order matters.
 - * Option C (Activate new, keep old as backup): Incorrect.
 - * Issue: Exceeds license limit (4 activations) and risks non-compliance. Backup requires deactivation or a separate key.
 - * Option D (Activate new, obliterate old): Incorrect.
 - * Details: tableau-server-obliterate.cmd wipes the entire install (data, config)-overkill and doesn't formally deactivate the key via TSM, potentially leaving licensing inconsistent.

Why This Matters: Proper license management prevents activation errors and ensures legal use across environments.

Reference: Tableau Server Documentation - "Manage Product Keys" (https://help.tableau.com/current/server/en-us/license_manage.htm).

NEW QUESTION # 43

You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Run the tsm reset command
- B. Edit tabsvc.yml
- C. Run the tsm register command
- D. Reinstall Tableau Server

Answer: A

Explanation:

To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the tsm reset command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.

Option B (Run the tsm reset command): Correct. Running tsm reset clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: tsm reset --username <new-username> --password <new-password>.

Option A (Edit tabsvc.yml): Incorrect. The tabsvc.yml file contains service configuration data, but manually editing it is not supported or recommended for resetting the administrator account. It could also corrupt the installation.

Option C (Run the tsm register command): Incorrect. The tsm register command is used to register Tableau Server with a new product key or identity store, not to reset the administrator account.

Option D (Reinstall Tableau Server): Incorrect. Reinstallation wipes the entire server, including content, and is overkill for this task. The tsm reset command achieves the goal without data loss.

Reference: Tableau Server Documentation - "TSM Reset Command" (https://help.tableau.com/current/server/en-us/cli_reset.htm).

NEW QUESTION # 44

What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Every 10 minutes
- B. Whenever extracts in the related workbook are refreshed
- C. Whenever a new extract is published
- D. Every 60 minutes

Answer: B,D

Explanation:

Data-driven alerts notify users when data meets conditions (e.g., sales > \$10K). Let's examine when Tableau checks these:

* Alert Mechanics:

* Enabled per site (Settings > General > Data-Driven Alerts).

* Backgrounder evaluates conditions against extract data.

* Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).

* Refresh Trigger: Also checks post-extract refresh for immediate updates.

* Option A (Every 60 minutes): Correct.

* Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.

* Config: Adjustable (e.g., -v 30 for 30 minutes).

* Option D (Whenever extracts in the related workbook are refreshed): Correct.

* Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.

* Why: Ensures timely notifications without waiting for the next poll.

* Option B (Every 10 minutes): Incorrect.

* Why: Not the default-possible via config, but not standard.

* Option C (Whenever a new extract is published): Incorrect.

* Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.

Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.

Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 45

.....

Everybody hopes he or she is a successful man or woman no matter in his or her social life or in his or her career. Thus owning an authorized and significant Analytics-Admn-201 certificate is very important for them because it proves that he or she boosts practical abilities and profound knowledge in some certain area. Passing Analytics-Admn-201 Certification can help they be successful and if you are one of them please buy our Analytics-Admn-201 guide torrent because they can help you pass the Analytics-Admn-201 exam easily and successfully.
