Our company controls all the links of AWS-Certified-Developer-Associate study materials which include the research, innovation, survey, production, sales and after-sale service strictly and strives to make every link reach the acme of perfection. Our company pays close attentions to the latest tendency among the industry and the clients' feedback about our AWS-Certified-Developer-Associate Study Materials.

The AWS Certified Developer - Associate exam is a multiple-choice exam that consists of 65 questions, which must be completed within 130 minutes. AWS-Certified-Developer-Associate exam is designed to test the candidate's knowledge and skills in the areas of AWS core services, AWS architecture, and application development. AWS-Certified-Developer-Associate exam covers topics such as AWS identity and access management, AWS Elastic Beanstalk, AWS Lambda, AWS DynamoDB, AWS Simple Storage Service (S3), and AWS CloudFormation. AWS-Certified-Developer-Associate Exam also covers the best practices for developing secure, scalable, and reliable AWS applications. Passing the AWS Certified Developer - Associate exam demonstrates that the candidate has a good understanding of AWS services and is capable of developing and maintaining AWS applications to meet business needs.

### Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q338-Q343):

#### NEW QUESTION # 338

A user has set an IAM policy where it allows all requests if a request from IP 10.10.10.1/32.

Another policy allows all the requests between 5 PM to 7 PM. What will happen when a user is requesting access from IP 10.10.10.1/32 at 6 PM?

- A. It is not possible to set a policy based on the time or IP
- **B. It will allow access**
- C. It will deny access
- D. IAM will throw an error for policy conflict

**Answer: B**

Explanation:

With regard to IAM, when a request is made, the AWS service decides whether a given request should be allowed or denied. The evaluation logic follows these rules:

By default, all requests are denied. (In general, requests made using the account credentials for resources in the account are always allowed.) An explicit allow policy overrides this default.

An explicit deny policy overrides any allows.

[http://docs.aws.amazon.com/IAM/latest/UserGuide/AccessPolicyLanguage\\_EvaluationLogic.html](http://docs.aws.amazon.com/IAM/latest/UserGuide/AccessPolicyLanguage_EvaluationLogic.html)

#### NEW QUESTION # 339

For a deployment using AWS CodeDeploy, what is the run order of the hooks for in-place deployments?

- **A. Application Stop -> Before Install -> After Install -> Application Start**
- B. Before Install -> Application Stop -> Application Start -> After Install
- C. Before Install -> Application Stop -> Validate Service -> Application Start
- D. Application Stop -> Before Install -> Validate Service -> Application Start

**Answer: A**

Explanation:

<https://docs.aws.amazon.com/codedeploy/latest/userguide/reference-appspec-file-structure-hooks.html>

#### NEW QUESTION # 340

An organization has created an application which is hosted on the AWS EC2 instance. The application stores images to S3 when the end user uploads to it. The organization does not want to store the AWS secure credentials required to access the S3 inside the instance. Which of the below mentioned options is a possible solution to avoid any security threat?

- A. Use the IAM based single sign between the AWS resources and the organization application.
- B. Use the X.509 certificates instead of the access and the secret access keys.
- C. Since the application is hosted on EC2, it does not need credentials to access S3.
- **D. Use the IAM role and assign it to the instance.**

**Answer: D**

Explanation:

The AWS IAM role uses temporary security credentials to access AWS services. Once the role is assigned to an instance, it will not need any security credentials to be stored on the instance.

Reference: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/iam-roles-for-amazon-ec2.html>

#### NEW QUESTION # 341

A Developer is designing a new application that uses Amazon S3. To satisfy compliance requirements, the Developer must encrypt the data at rest.

How can the Developer accomplish this?

- A. Use aws:SecureTransport as a condition in the S3 bucket policy.
- B. Use Amazon RDS with default encryption.
- C. Use s3:x-amz-acl as a condition in the S3 bucket policy.
- **D. Turn on S3 default encryption for the S3 bucket.**

**Answer: D**

#### NEW QUESTION # 342

A Developer is publishing critical log data to a log group in Amazon CloudWatch Logs, which was created 2 months ago. The Developer must encrypt the log data using an AWS KMS customer master key (CMK) so future data can be encrypted to comply with the company's security policy. How can the Developer meet this requirement?

- A. Use the AWS CLI create-log-group command and specify the key Amazon Resource Name (ARN)
- B. Use the Cloud Watch Logs console and enable the encrypt feature on the log group.
- **C. Use the KMs console and associate the CMK with the log group**
- D. Use the AWS CLI associate-kms-key command and specify the key Amazon Resource Name (ARN)

**Answer: C**
