Visual Mule-Dev-202 Cert Exam & Mule-Dev-202 Valid Test Online

The purpose of your registration for Mule-Dev-202 exam is definitely not to enjoy the exam process, but to pass the exam! The high passing rate of Mule-Dev-202 study questions is absolutely what you need. Everyone wants to get more results in less time. After all, this society really needs us to be efficient. And our Mule-Dev-202 Exam Braindumps are designed carefully to help you pass the exam in the least time without least efforts.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q27-Q32):

NEW QUESTION # 27

Northern Trail Outfitters must create a near real-time inventory API that can be used within its retail POS systems, across its mobile

and online stores, and by its strategic B2B e-commerce partners. The API must provide accurate and up-to-date product inventory levels. The data currently resides in both SAP and NetSuite.

According to best practices, which hyperautomation tool should be used to build this solution?

- A. MuleSoft Composer
- **B. Anypoint Platform**
- C. MuleSoft RPA
- D. Salesforce Flow

Answer: B

Explanation:

To create a near real-time inventory API that integrates data from SAP and NetSuite and can be used across various platforms and partners, the Anypoint Platform is the most suitable tool:

Anypoint Platform:

Anypoint Platform provides comprehensive integration capabilities, including real-time data processing, API management, and connectivity to various systems like SAP and NetSuite.

It supports building robust, scalable APIs that can handle near real-time data synchronization, ensuring accurate and up-to-date inventory levels across multiple channels.

Best Practices:

Using Anypoint Platform, you can design and manage APIs with fine-grained control over security, performance, and monitoring, adhering to best practices for enterprise integration.

Anypoint Platform Documentation

NEW QUESTION # 28

Northern Trail Outfitters (NTO) has a new business channel that requires exposing their existing non- MuleSoft APIs to the public. They do not have an Anypoint Flex Gateway.

The NTO digital channel team wants to leverage Anypoint Platform as its API management tool.

What is the most time-efficient mechanism of securing their backend systems?

- A. Use a basic endpoint with a configured consumer endpoint.
- B. Rewrite the existing APIs using MuleSoft.
- C. Expose each endpoint as a basic endpoint.
- **D. Create a proxy in front of each existing API.**

Answer: D

Explanation:

To expose existing non-MuleSoft APIs and secure them efficiently using Anypoint Platform, you can create API proxies. This approach provides several benefits:

API Proxy Creation:

Creating a proxy involves setting up an intermediary that forwards requests to the existing backend APIs. This allows you to leverage Anypoint Platform's API management capabilities without rewriting the existing APIs.

Proxies can be created quickly and configured to apply various security and governance policies.

Security and Management:

By creating a proxy, you can secure the APIs using Anypoint Platform's features such as rate limiting, authentication, and monitoring. This method is time-efficient and leverages the robust security features of the Anypoint Platform without significant redevelopment effort.

Anypoint Platform API Proxy Documentation

NEW QUESTION # 29

For a MuleSoft Composer flow, errors can be noted in its Flow Details page.

What other way can MuleSoft Composer send notifications when errors occur?

- A. It posts to a configured Chatter profile.
- B. It generates a notification in the flow.
- C. It sends a message to a configured Slack channel.

- D. It sends a notification to the configured email address.

Answer: D

Explanation:

MuleSoft Composer provides a way to handle errors and notify users when something goes wrong in a flow.

Aside from viewing errors on the Flow Details page, MuleSoft Composer can also send notifications to alert users about the errors.

Flow Error Handling: When an error occurs in a MuleSoft Composer flow, the error is logged and visible on the Flow Details page.

Email Notifications: MuleSoft Composer can be configured to send notifications to a specified email address.

This allows users to be promptly informed of any issues without having to constantly monitor the Flow Details page.

Configuration: This can be set up in the MuleSoft Composer settings, where an email address can be configured to receive these notifications.

MuleSoft Composer Error Notifications

NEW QUESTION # 30

Northern Trail Outfitters set up a MuleSoft Composer integration between Salesforce and NetSuite that updates the Order object in Salesforce with data from NetSuite.

When an order in Salesforce is updated as complete, the Last Order Date custom field on the related account should automatically update with the date the order was marked complete.

What is the best practice to achieve this outcome?

- A. Update the MuleSoft Composer integration to also update the related account when the order is marked complete.
- B. Create a record-triggered flow on the Order object that updates the related account when the order is marked complete.
- C. Replace the MuleSoft Composer integration with a three-tier API integration between Salesforce and NetSuite using Anypoint Platform
- D. Create a MuleSoft RPA bot that updates the related account when the order is marked complete.

Answer: B

Explanation:

To update the Last Order Date custom field on the related account when an order is marked complete in Salesforce, the best practice is to use a record-triggered flow:

Create a Record-Triggered Flow:

Use Salesforce Flow to create a record-triggered flow on the Order object.

Set the flow to trigger when a record is updated (specifically, when the order status is updated to complete).

Update the Related Account:

In the flow, use a Get Records element to fetch the related Account record.

Use an Update Records element to update the Last Order Date custom field on the related Account with the date the order was marked complete.

This approach ensures that the data remains within Salesforce and is updated immediately as part of the same transaction, providing a robust and efficient solution.

NEW QUESTION # 31

Northern Trail Outfitters (NTO) uses Flow Orchestration to automate quote development. The "Review Quote" work item is performed by their team of technical writers but can be fulfilled by any technical writer on the team.

How can NTO ensure the "Review Quote" work item is assigned to the correct Salesforce user?

- A. Use MuleSoft RPA to review the document and submit it for approval if no issues are found.
- B. Create a user collection variable and assign the work item to the user collection.
- C. Create a Group for the team of Salesforce Users and assign the work item to the group.
- D. Use backend steps to automate work item assignment to the next available technical writer.

Answer: C

Explanation:

To ensure the "Review Quote" work item is assigned to the correct Salesforce user within the team of technical writers, the following approach can be used:

Creating a Group:

Create a Group in Salesforce that includes all the technical writers who are eligible to perform the "Review Quote" work item. This group acts as a collective resource pool.

Assigning the Work Item to the Group:

When the "Review Quote" work item is created in Flow Orchestration, assign it to the group rather than an individual user. Salesforce will then allow any available technical writer within the group to pick up and complete the task.

Ensuring Flexibility and Availability:

This method ensures that the work item can be completed by any technical writer in the team, providing flexibility and improving the chances of timely completion by utilizing the group's collective availability.
