Topic 4	<ul style="list-style-type: none"> Manage and maintain devices: This section deals with managing, troubleshooting, and safeguarding various devices. It also covers methods to ensure that they meet organizational policies and security standards.

Microsoft Endpoint Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45

Your network contains an Active Directory named contoso.com. The domain contains two computers named Computer1 and Computer2 that run Windows 10.

Folder Redirection is configured for a domain user named User1. The AppData\Roaming folder and the Desktop folder are redirected to a network share.

User1 signs in to Computer1 and performs the following tasks:

- Configures screen saver to start after five minutes of inactivity
- Modifies the default save location for Microsoft Word
- Creates a file named File1.docx on the desktop
- Modifies the desktop background

You need to identify what will be retained when User1 signs in to Computer2.

What should you identify?

- A. File1.docx, the desktop background, and the default save location for Word only
- **B. File1.docx only**
- C. File1.docx and the desktop background only
- D. File1.docx, the screen saver settings, the desktop background, and the default save location for Word

Answer: B

Explanation:

User selected Desktop background, user nominated default word save location and user screen saver settings are all stored in under the user based registry (ie NTuser.dat) NTUSER.DAT is not stored under the user APPDATA folder but under the users local profile.

Roaming profiles are not stated as being enabled in domain so must assume they are not active and therefore NTUser.dat will not roam to server and to other logged on computers. That means user registry settings will not move from one computer to another when user logs onto another computer.

As stated the desktop folder is being redirected and applied to domain user named user1 which must have been done using AD Group Policies. The Redirected Folder Group Policy will apply to both Computer1 and Computer2 at logon time.

NEW QUESTION # 46

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 E5 subscription that contains a user named User1 and the devices shown in the following table.

Name	Operating system	Azure AD status
Device1	Windows 11	Joined
Device2	Windows 10	Joined

User1 can access her Microsoft Exchange Online mailbox from both Device1 and Device2.

You plan to create a Conditional Access policy named CAPolicy1 that will have the following settings:

* Assignments

- Users or workload identities: User1
- Cloud apps or actions: Office 365 Exchange Online
- * Access controls
- Grant: Block access

You need to configure CAPolicy1 to allow mailbox access from Device1 but block mailbox access from Device2.

Solution: You add a condition that specifies trusted location.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 47

You have a Microsoft 365 subscription that contains the following devices enrolled in Microsoft Intune:

- * A corporate-owned Windows device named Device1
- * A personally-owned Android device named Device2

You need to use a remote action on each device.

The solution must meet the following requirements:

- * Repurpose Device1 by returning the device to the factory default settings.
- * Remove only corporate data from Device2 and remove the device from Intune when the device checks in.

Which remote action should you use on each device? To answer, drag the appropriate remote actions to the correct devices. Each remote action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 48

You have a Microsoft 365 E5 subscription that uses Microsoft Intune.

You add apps to Intune as shown in the following table.

Name	App type
App1	Android store app
App2	Android line-of-business app
App3	Managed Google Play store app

You need to create an app configuration policy named Policy1 for the Android Enterprise platform. Which apps can you manage by using Policy1?

- A. App1 and App3 only
- B. App1, App2, and App3
- C. App2 only
- D. App2 and App3 only**
- E. App3 only

Answer: D

Explanation:

Managed Google Play

NEW QUESTION # 49

You need to meet the requirements for the MKG department users.

What should you do?

- A. Assign the MKG department users the Basic Purchaser role in Microsoft Store for Business
- B. Acquire App1 from Microsoft Store for Business**
- C. Download the APPX file for App1 from Microsoft Store for Business
- D. Assign the MKG department users the Purchaser role in Microsoft Store for Business
- E. Add App1 to the private store

Answer: B

Explanation:

Reference:

<https://docs.microsoft.com/en-us/microsoft-store/distribute-apps-from-your-private-store> Enable the users in the MKG department to use App1.

The private store is a feature in Microsoft Store for Business and Education that organizations receive during the signup process.

When admins add apps to the private store, all employees in the organization can view and download the apps. Your private store is available as a tab in Microsoft Store app, and is usually named for your company or organization. Only apps with online licenses can be added to the private store.
