### NEW QUESTION # 23

Your company has an Azure AD tenant named contoso.onmicrosoft.com.

You purchase a domain named contoso.com from a registrar and add all the required DNS records.

You create a user account named User1. User1 is configured to sign in as user1@contoso.onmicrosoft.com.

You need to configure User1 to sign in as user1@contoso.com.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run Update-MgDomain -DomainId contoso.com.	
Modify the email address of User1.	
Add contoso.com as a SAN for an X.509 certificate.	
Add a custom domain name.	
Verify the custom domain.	
Modify the username of User1.	

Answer:

### NEW QUESTION # 24

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure AD tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

**PROVISION FROM ACTIVE DIRECTORY**

**Azure AD Connect cloud provisioning**  
 This feature allows you to manage provisioning from the cloud.  
[Manage provisioning \(Preview\)](#)

**Azure AD Connect sync**

Sync Status: Enabled  
 Last Sync: Less than 1 hour ago  
 Password Hash Sync: Enabled

**USER SIGN-IN**

Federation	Disabled	0 domains
Seamless single sign-on	Enabled	1 domain
Pass-through authentication	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com.

You need to ensure that User2 can access the resources in Azure AD.

Solution: From the Microsoft Entra admin center, you assign User2 the Security Reader role. You instruct User2 to sign in as user2@contoso.com.

Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

Explanation:

This is not a permissions issue so you do not need to assign the Security Reader role.

The on-premises Active Directory domain is named contoso.com. User2 could sign on as user2@contoso.com but you would first need to change the UPN of User2 to user2@contoso.com.

### NEW QUESTION # 25
