問題 #47

Which services are active after a Unisphere for PowerMax installation on a Microsoft Windows host?

- A. SMASandGNS
- B. SYMAPI and symrdfg
- C. SMASandSTP
- D. SMAS and smasdb

答案：D

解題說明：

Step by Step Comprehensive Detailed Explanation:

When you install Unisphere for PowerMax on a Microsoft Windows host, it installs several services necessary for its operation. The two primary services that are active after installation are:

* SMAS (Storage Management Agent Service): This service is responsible for communication between the Unisphere server and the PowerMax storage array. It handles tasks like collecting data, sending commands, and receiving alerts from the array.

* smasdb: This service manages the local database used by Unisphere for storing configuration information, performance data, and other relevant information.

Why other options are incorrect:

* A. SYMAPI and symrdfg: SYMAPI is a command-line interface tool, not a service. symrdfg is a service related to SRDF (Symmetrix Remote Data Facility) replication, which may not be active if SRDF is not configured.

* B. SMASandGNS: GNS is not a standard service associated with Unisphere for PowerMax.

* C. SMASandSTP: STP is not a standard service associated with Unisphere for PowerMax.
