

Latest F5CAB3 Dumps Guide–Marvelous Answers Real Questions Provider for F5CAB3

P.S. Free & New F5CAB3 dumps are available on Google Drive shared by Prep4SureReview: https://drive.google.com/open?id=1XKIwJk32aoCh6LujV_pzDJ_Lo8zFHzX

All contents of F5CAB3 training guide are being explicit to make you have explicit understanding of this exam. Their contribution is praised for their purview is unlimited. None cryptic contents in F5CAB3 learning materials you may encounter. And our F5CAB3 Exam Questions are easy to understand and they are popular to be sold to all over the world. Just look at the comments on the website, then you will know that we have a lot of loyal customers.

F5 F5CAB3 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Apply procedural concepts required to modify and manage pools: This domain addresses managing server pools including health monitors, load balancing methods, priority groups, and service port configurations.
Topic 2	<ul style="list-style-type: none">Apply procedural concepts required to modify and manage virtual servers: This domain covers managing virtual servers including applying persistence, encryption, and protocol profiles, identifying iApp objects, reporting iRules, and showing pool configurations.

Fantastic F5CAB3 Dumps Guide to Obtain F5 Certification

Achieving success in the F5 F5CAB3 certification exam opens doors to lucrative job opportunities and career advancements. The BIG-IP Administration Data Plane Configuration (F5CAB3) credential is highly valuable in today's industry. However, many candidates face the frustration of exam failure and wasted time and resources by relying on outdated F5 F5CAB3 Practice Questions. To save both time and money, it is crucial to prepare with the most up-to-date and reliable F5CAB3 exam questions.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q63-Q68):

NEW QUESTION # 63

During a high-demand event, the BIG-IP Administrator needs to limit the number of new connections per second to a Virtual Server. What should be applied?

- A. OneConnect profile
- B. Connection Rate Limit
- C. Connection Limit

- D. HTTP Compression profile

Answer: B

Explanation:

Connection rate limits restrict how many new connections are accepted per second, protecting application resources.

NEW QUESTION # 64

All pool members are online. All other virtual server settings are at default.

What might alter the load balancing behavior? (Choose one answer)

- A. Enabling a fallback host in the HTTP profile
- **B. Adding a persistence profile**
- C. Adding a OneConnect profile
- D. Enabling SNAT automap

Answer: B

Explanation:

By default, BIG-IP load balancing algorithms (such as Round Robin) distribute connections evenly across all available pool members. However, persistence profiles override normal load balancing decisions by forcing subsequent connections from a client to be sent to the same pool member.

According to the BIG-IP Administration: Data Plane Configuration documentation:

Persistence creates a client-to-server mapping that is honored before load balancing algorithms are applied.

When persistence is enabled, BIG-IP may repeatedly select the same pool member even if others are available.

This directly alters load balancing behavior.

Why the other options are incorrect:

A . Adding a OneConnect profile

OneConnect optimizes server-side TCP connections but does not change which pool member is selected.

B . Enabling SNAT automap

SNAT affects source address translation, not pool member selection.

C . Enabling a fallback host in the HTTP profile

A fallback host is only used when no pool members are available.

Correct Resolution:

Adding a persistence profile alters load balancing behavior by maintaining client affinity to a specific pool member.

NEW QUESTION # 65

What is the status of a pool member when manual resume is enabled and a health check first fails and then passes?

- **A. Offline (Disabled)**
- B. Offline (Enabled)
- C. Available (Disabled)
- D. Available (Enabled)

Answer: A

Explanation:

With manual resume enabled, BIG-IP does not automatically return a pool member to service after recovery.

The member remains offline until manually re-enabled.

NEW QUESTION # 66

A BIG-IP Administrator creates a new Virtual Server to load balance SSH traffic. Users are unable to log on to the servers.

What should the BIG-IP Administrator do to resolve the issue?

- A. Set Source Address to 10.1.1.2
- **B. Set HTTP Profile to None**
- C. Set Protocol to UDP
- D. Set Destination Address/Mask to 0.0.0.0/0

Answer: B

Explanation:

SSH is a TCP Layer 4 protocol. Applying an HTTP profile causes BIG-IP to expect HTTP headers, breaking SSH sessions. Removing the HTTP profile allows raw TCP forwarding.

NEW QUESTION # 67

A Standard Virtual Server for a web application is configured with Automap for the Source Address Translation option. The original source address of the client must be known by the backend servers. What should the BIG-IP Administrator configure to meet this requirement?

- A. The Virtual Server type as Performance (HTTP)
- B. An HTTP Transparent profile
- C. A SNAT Pool with the client IP
- **D. An HTTP profile to insert the X-Forward-For header**

Answer: D

Explanation:

SNAT Automap is a common configuration that replaces the client's original source IP address with one of the BIG-IP's self IP addresses. This ensures that the backend servers send return traffic back through the BIG-IP, which is necessary for the ADC to process the traffic correctly. However, a side effect of SNAT is that the backend servers only see the BIG-IP's IP in their logs, losing visibility into the true identity of the client.

To resolve this while still using SNAT for routing purposes, the administrator must configure the BIG-IP to "pass" the client's IP address at the application layer. This is achieved by using an HTTP Profile with the Insert X-Forwarded-For setting enabled. When this profile is applied to the Virtual Server, the BIG-IP intercepts the HTTP request, adds a header (X-Forwarded-For) containing the client's original IP, and then forwards the modified request to the server. The backend web server can then be configured to read this header and log the original client IP instead of the BIG-IP's SNAT address.

Other options are incorrect for this requirement. Performance (HTTP) (Option A) is a virtual server type optimized for speed but often lacks the full Layer 7 header manipulation capabilities of a Standard Virtual Server. SNAT Pool with the client IP (Option C) is technically impossible as SNAT pools use static, pre-defined IPs. There is no such thing as an HTTP Transparent profile (Option D) in standard BIG-IP administration for this purpose. The X-Forwarded-For header insertion within the HTTP profile is the standard procedural method for maintaining client visibility in SNAT-enabled environments.

NEW QUESTION # 68

.....

This is a wise choice, after using our F5CAB3 training materials, you will realize your dream of a promotion because you deserve these reports and your efforts will be your best proof. Therefore, when you are ready to review the exam, you can fully trust our products, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly. Thus, users do not have to worry about such trivial issues as typesetting and proofreading, just focus on spending the most practice to use our F5CAB3 Learning Materials. After careful preparation, I believe you will be able to pass the exam.
